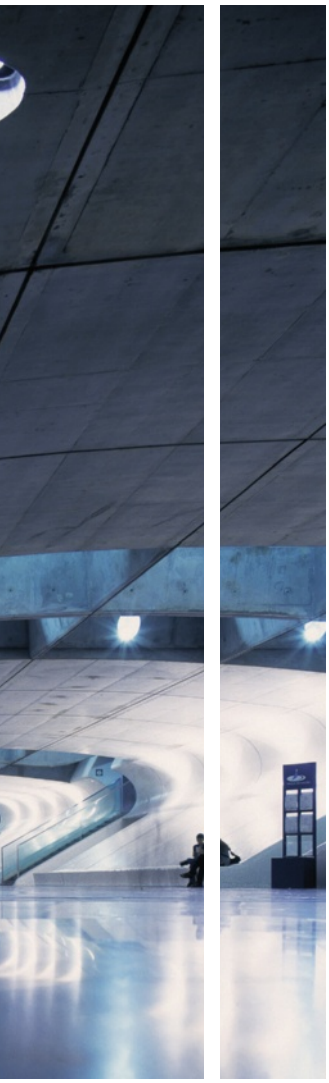
The right one for everyone

Our portfolio includes switchboards, busbar trunking systems, distribution boards, protection, switching, measuring and monitoring devices, building management systems, switches and socket outlets. All over the world, the universality, modularity and intelligence of our components and systems give you innumerable benefits – all the time they are in use. Developed according to the respective international standards, we offer forward-looking design with innovative functions and ensure the highest quality standards world-wide.

Sustainability in focus

As a worldwide leader in the provision of high-quality, standards-compliant products and systems for low-voltage power distribution, we contribute to the sustainable and responsible handling of electrical energy. With our integrated portfolio of energy saving and distribution through short circuit protection and overload protection through to energy management, we support the implementation of environmentally friendly energy concepts on the basis of wind power, photovoltaics, intelligent buildings and electromobility.



Universal, safe and intelligent power distribution

Whether in industrial plants, in infrastructure or in buildings: Each technical plant depends on the reliable supply of electricity. Even a short outage can have grave consequences. We offer the best technology for the responsible use of electrical energy and at the same time help to protect people and property and to conserve natural resources.

We are happy to help you with comprehensive support from the initial information through to operation. Take a closer look at all the options available from Siemens.

Everything for power distribution

Consistent solutions are required for electric power distribution in buildings. Our answer is Totally Integrated Power (TIP). TIP stands for innovative products, systems and software tools which ensure the safe and reliable distribution of electric power. They are supplemented by communication-capable circuit breakers and modules which connect the power distribution system to the building automation system or industrial automation solutions. These in turn can be linked to a comprehensive energy management system which contributes to optimizing the consumption of electricity and hence to lowering the costs of operation.

Excellent support

As a competent and reliable partner, we also offer you comprehensive support – from the initial information, through planning, configuring and ordering to commissioning, operation and technical support. We know the needs of your working environment and your daily business. Based on this, we give you flexible and high quality support, which allows you to concentrate fully on your customers and their needs.

Much more than a catalog. The Industry Mall.

You have a catalog in your hands that will serve you well for selecting and ordering your products. But have you heard of the electronic online catalog (the Industry Mall) and all its benefits? Take a look around it sometime:

www.siemens.com/industrymall

Selecting

Find your products in the structure tree, in the new "Bread-crumb" navigation or with the integral search machine with expert functions. Electronic configurators are also integrated into the Mall. Enter the various characteristic values and the appropriate product will be displayed with the relevant order numbers. You can save configurations, load them and reset them to their initial status.

Ordering

You can load the products that you have selected in this way into the shopping basket at a click of the mouse. You can create your own templates and you will be informed about the availability of the products in your shopping cart. You can load the completed parts lists directly into Excel or Word.

Delivery status

When you have sent the order, you will receive a short e-mail confirmation which you can print out or save. With a click on "Carrier", you will be directly connected to the website of the carrier where you can easily track the delivery status.

Added value due to additional information

So you have found your product and want more information about it? In just a few clicks of the mouse, you will arrive at the image data base, manuals and operating instructions. Create your own user documentation with My Documentation Manager.
Also available are FAQs, software downloads, certificates and technical data sheets as well as our training programs. In the image database you will find, depending on the product, 2D/3D graphics, dimension drawings and exploded drawings, characteristic curves or circuit diagrams which you can download.

Convinced? We look forward to your visit!

(N) Circuit breaker with ECO breaking capacity N

(S) Circuit breaker with standard breaking capacity S

(H) Circuit breaker with high breaking capacity H

(C) Circuit breakers with very high breaking capacity C

(DC) Non-automatic air circuit breakers with DC breaking capacity

These breaking capacities are indicated in the corresponding tables by the symbols shown on orange backgrounds.

Abbreviations (functions)		
L	= Long Time Delay	= Overload protection
S	= Short Time Delay	= Short-circuit protection (short-time delayed)
I	= Instantaneous	= Short-circuit protection (instantaneous)
N	= Neutral Protection	Neutral conductor protection
G	= Ground Fault	Ground-fault protection

L, S, I, N, G: Designations acc. to IEC 60947-2, Appendix K.

1) Size II with $I_{n\,max} \leq 2500$ A.

2) Size II with $I_{n\,max} = 3200$ A and $I_{n\,max} = 4000$ A.

3) At a rated voltage of ≥ 690 V the I_{cw} value of the circuit breaker cannot be greater than the I_{cu} or I_{cs} value at 690 V.

4) Rated operational voltage $U_e = 1150$ V.

5) At $U_e = 300$ V DC.

6) At $U_e = 300$ V DC.

7) At $U_e = 600$ V DC.

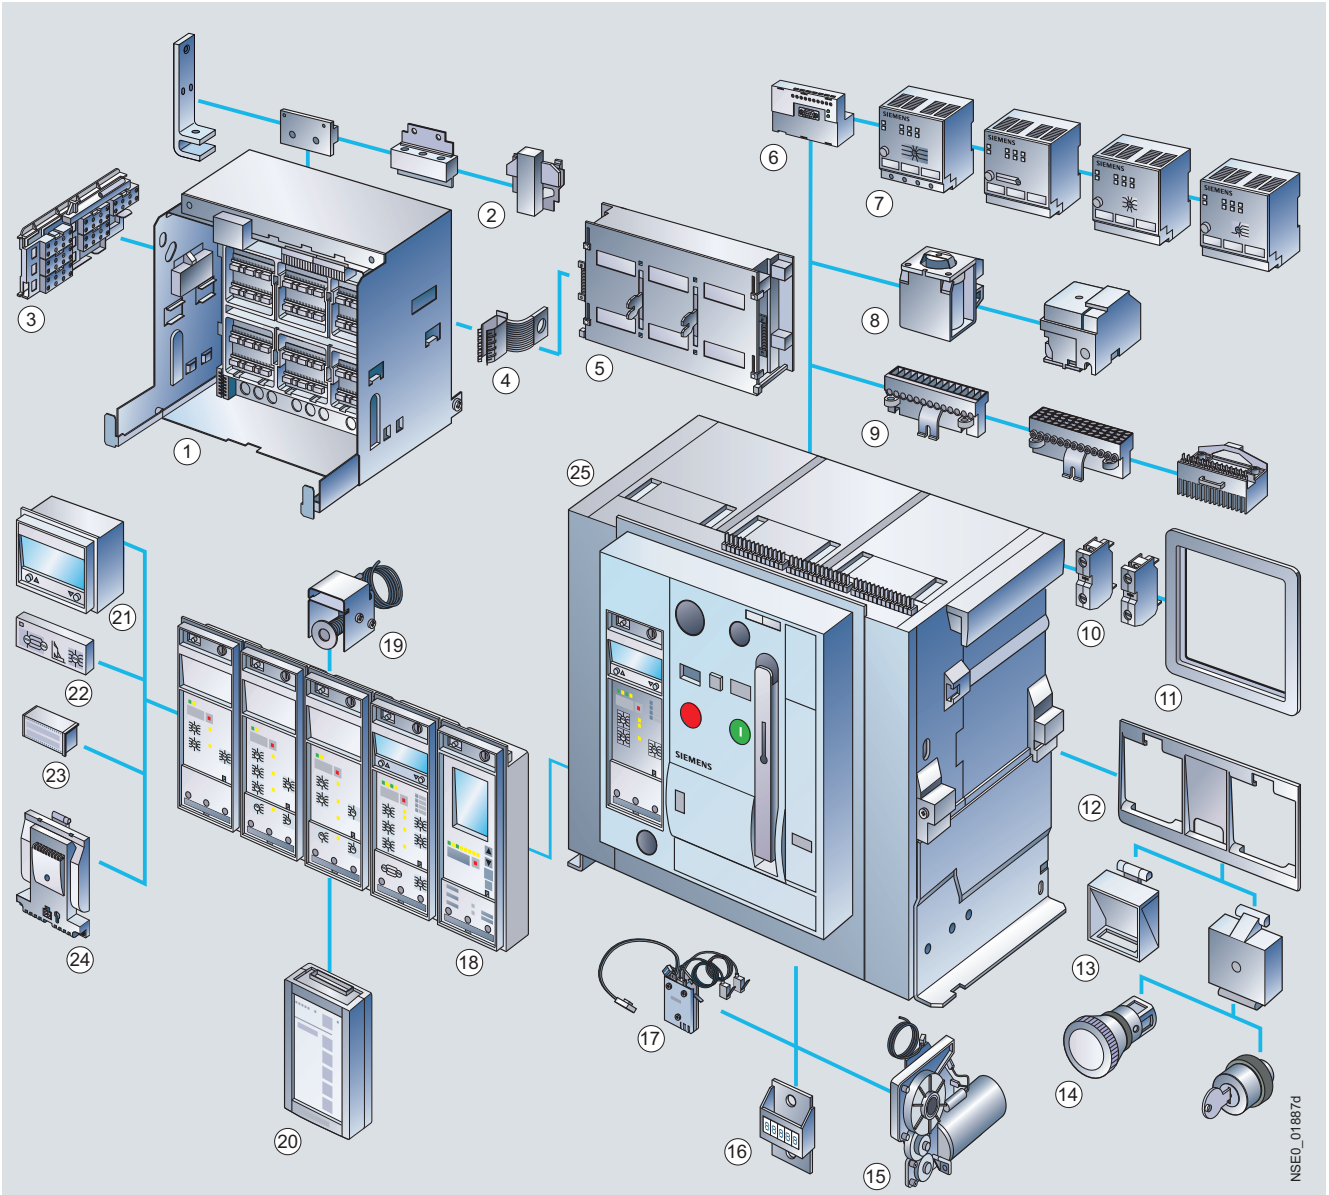
8) At $U_e = 1000$ V DC.

9) Values also apply to 690 V + 20 % version with Z-option "A16".

Air Circuit Breakers

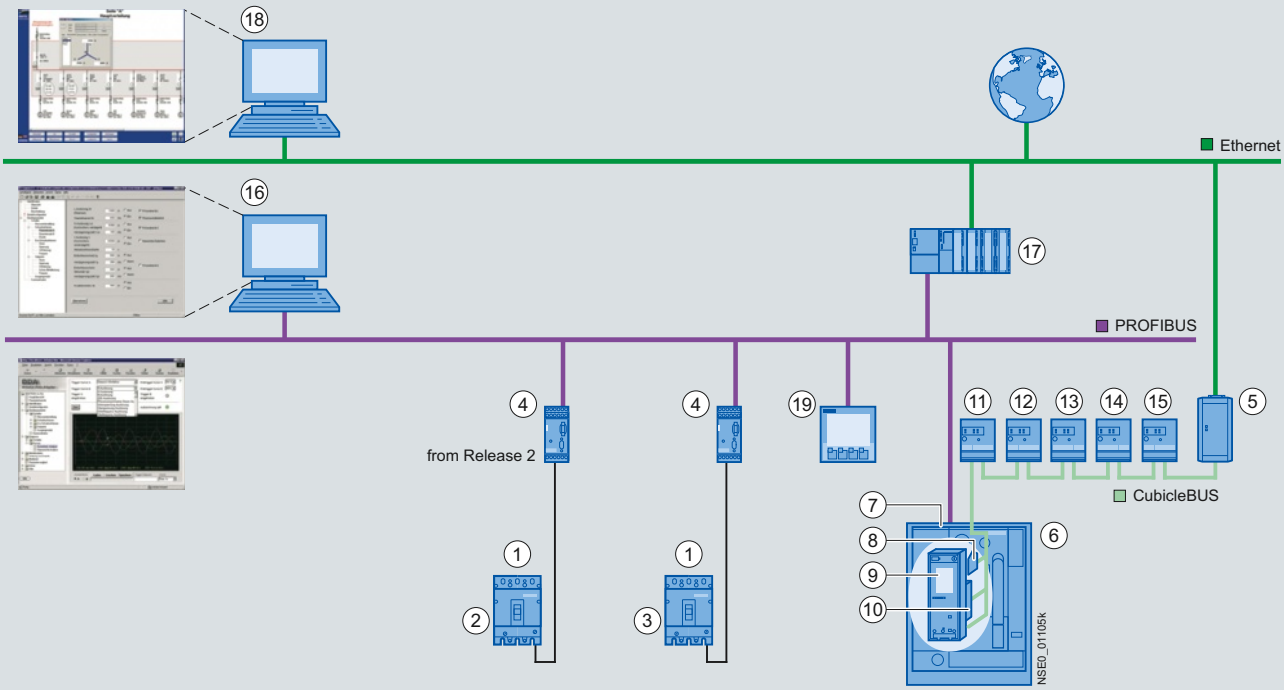
Introduction

3WL air circuit breakers:
Superior individual products integrated into uniform power distribution systems – up to and including industry-specific industrial and infrastructure solutions



① Guide frame (pages 1/38 to 1/41)
② Main circuit connection front, flange, horizontal, vertical (pages 1/36, 1/53 and 1/54)
③ Position signaling switch (pages 1/34 and 1/46)
④ Grounding connection, leading (page 1/50)
⑤ Shutters (pages 1/34 and 1/49)
⑥ COM15 PROFIBUS module or COM16 MODBUS module (pages 1/34 and 1/52)
⑦ External **Cubicle**BUS module (page 1/51)
⑧ Closing coil, auxiliary release (pages 1/31, 1/33 and 1/48)
⑨ Auxiliary conductor plug-in system (pages 1/35 and 1/47)
⑩ Auxiliary switching block (pages 1/31 and 1/48)
⑪ Door sealing frame (pages 1/33 and 1/49)
⑫ Interlocking set for mechanical ON/OFF (page 1/43)
⑬ Transparent panel, function insert (page 1/43)
⑭ EMERGENCY-STOP pushbutton, key operated (page 1/46)
⑮ Motorized operating mechanism (pages 1/33 and 1/48)
⑯ Operating cycles counter (pages 1/33 and 1/46)
⑰ Breaker status sensor (BSS) (pages 1/34 and 1/52)
⑱ Protective device with device holder, Electronic Trip Unit (ETU) (page 1/42)
⑲ Remote reset solenoid (pages 1/33 and 1/43)
⑳ Breaker data adapter (BDA *Plus*) (page 1/51)
㉑ Four-line display (page 1/42)
㉒ Ground-fault protection module (page 1/42)
㉓ Rating plug (pages 1/32 and 1/42)
㉔ Measurement function module (pages 1/34 and 1/42)
㉕ Circuit breaker (pages 1/9 to 1/30)

Communication-capable circuit breakers (with ETU45B or ETU76B Electronic Trip Unit)



1 3VL molded case circuit breakers
2 Electronic Trip Unit LCD
3 Electronic Trip Unit
4 COM20 Release 2 PROFIBUS module [1] Including ZSS
5 BDA *Plus* with Ethernet interface
6 3WL air circuit breakers
7 COM15 PROFIBUS module [2]
8 Breaker status sensor (BSS)
9 Electronic Trip Unit
10 Measurement function *Plus*
11 Zone Selective Interlocking modules
12 Digital output module with relay contacts
13 Digital output module with relay contacts, configurable
14 Analog output modules
15 Digital input module
16 Switch ES Power On PC / powerconfig as of V2.3
17 PLC, e. g. SIMATIC S7
18 e. g. Powermanager or SIMATIC powerrate
19 7KM PAC measuring devices

[1] For a MODBUS-RTU connection the COM21 module is required.
[2] For a MODBUS-RTU connection the COM16 module is required.

Features

- Coordinated communication concept using the PROFIBUS DP or MODBUS, ranging from 16 A to 6300 A with 3VL molded case circuit breakers and 3WL air circuit breakers
- The high level of modularity of circuit breakers and accessories allows easy retrofitting of all communication components
- Significant additional benefits for the switchgear due to the possibility of linking up external input and output modules to the circuit breaker-internal **Cubicle**BUS of the 3WL
- Innovative software products for parameterization, operation, monitoring, and diagnostics of circuit breakers, both locally or via PROFIBUS DP, MODBUS or Ethernet/Intranet/Internet
- Complete integration of the circuit breakers into the Totally Integrated Power and Totally Integrated Automation solutions

Communication:

- For air circuit breakers with optional communication function (ETU45B or ETU76B Electronic Trip Unit) see pages 1/9 to 1/30.
- For accessories see pages 1/51 and 1/52.
- For more information see also chapters "Measuring Devices and Power Management" and "Software".

Air Circuit Breakers

3WL Air Circuit Breakers/Non-Automatic Air Circuit Breakers up to 6300 A (AC), IEC

Introduction

Benefits

Low space requirements

The 3WL air circuit breakers require very little space. Size I devices (up to 2000 A) fit into a 400 mm wide switchgear panel. Size III devices (up to 6300 A) are the smallest of their kind and with their construction width of 704 mm fit into a 800 mm wide switchgear panel.

Modular design

Components like auxiliary releases, motorized operating mechanisms, Electronic Trip Units, current transformers, auxiliary circuit signaling switches, automatic reset devices, interlocks and engagement operating mechanisms can all be exchanged or retrofitted at a later stage, thus allowing the circuit breaker to be adapted to new, changing requirements.

The main contact elements can all be replaced in order to increase the endurance of the circuit breaker.

Retrofittable modules for Electronic Trip Units

Modularity is one of the main features of the new 3WL circuit breakers.
Special LCDs, ground-fault modules, rating plugs and communication modules for the Electronic Trip Units are available for fast and easy retrofitting and adaptation to changing requirements.

Communication/measurement functions

The use of modern communication-capable circuit breakers opens up completely new possibilities in terms of start-up, parameterization, diagnostics, maintenance and operation. This allows many different ways of reducing costs and improving productivity in industrial plants, buildings and infrastructure projects to be achieved.

- Fast and reliable parameterization
- Timely information and response can prevent plant stoppages
- Effective diagnostics management
- Measured values are the basis for efficient load management, for drawing up power demand profiles and for assigning energy to cost centers
- Preventive maintenance reduces the risk of expansive plant down-times
- Measurement function with a very wide range of measured values, such as current, voltage, energy, power etc.
- Can be used in 1000 V AC and 690 V IT networks

Applications

- As incoming-feeder, distribution, tie, and outgoing-feeder circuit breakers in electrical installations.
- For switching and protecting motors, capacitors, generators, transformers, busbars and cables.

When connected to an electronic I&C system, the air circuit breakers offer a wide range of options for monitoring network events.

The extensive, coordinated SENTRON range of devices covers applications between 16 A and 6300 A with molded case and air circuit breakers.

The AC devices are available as circuit breakers and non-automatic air circuit breakers. DC devices are only available as non-automatic air circuit breakers.

Standards

3WL circuit breakers comply with:

- IEC 60947-2
- Climate-proof according to IEC 60068-2-30.

Versions with UL 489 also available, see Catalog LV 16.

For further standards, see Appendix.

Footnotes for pages 1/9 to 1/13:

1) The rated current is determined by the rating plug. For the standard version, the supplied module is equal to the maximum rated current. If a lower rated current is required, adaptation by order code on page 1/32.

2) For permissible rated short-time current I_{cc} and rated short-circuit making capacity I_{cm} for non-automatic air circuit breakers see page 1/5.

3) Current transformers for protection of the N conductor and current transformers for detection of the ground-fault current in the grounded neutral point of the transformer are to be ordered separately, see page 1/42.

4) Current transformers for protection of the N conductor are to be ordered separately, see page 1/42.

5) ETU45B and ETU76B with ground-fault protection module GFM AT (alarm and tripping), see page 1/42.

6) ETU15B cannot be used with 3WL circuit breakers, size III.

* You can order this quantity or a multiple thereof.

✓ Additional price

Footnotes for pages 1/14 to 1/19:

1) The rated current is determined by the rating plug. For the standard version, the supplied module is equal to the maximum rated current. If a lower rated current is required, adaptation by order code on page 1/32.

2) Z options which are installed on the guide frame are not available.

3) For permissible rated short-time current I_{cc} and rated short-circuit making capacity I_{cm} for non-automatic air circuit breakers see page 1/5.

4) Current transformers for protection of the N conductor and current transformers for detection of the ground-fault current in the grounded neutral point of the transformer are to be ordered separately, see page 1/42.

5) Current transformers for protection of the N conductor are to be ordered separately, see page 1/42.

6) ETU45B to ETU76B with ground-fault protection module GFM AT (alarm and tripping), see page 1/42.

7) ETU15B cannot be used with 3WL circuit breakers, size III.

* You can order this quantity or a multiple thereof.

Footnotes for pages 1/20 to 1/24:

1) The rated current is determined by the rating plug. For the standard version, the supplied module is equal to the maximum rated current. If a lower rated current is required, adaptation by order code on page 1/32.

2) For permissible rated short-time current I_{cc} and rated short-circuit making capacity I_{cm} for non-automatic air circuit breakers see page 1/5.

3) Current transformers for protection of the N conductor and current transformers for detection of the ground-fault current in the grounded neutral point of the transformer are to be ordered separately, see page 1/42. The internal current transformers for N conductors can be ordered by adding the supplement "–Z" and the order code "F23", see page 1/34.

4) Current transformers for protection of the N conductor are to be ordered separately, see page 1/42.

5) ETU45B to ETU76B with ground-fault protection module GFM AT (alarm and tripping), see page 1/42.

6) ETU15B cannot be used with 3WL circuit breakers, size III.

* You can order this quantity or a multiple thereof.

✓ Additional price

Footnotes for pages 1/25 to 1/30:

1) The rated current is determined by the rating plug. For the standard version, the supplied module is equal to the maximum rated current. If a lower rated current is required, adaptation by order code on page 1/32.

2) Z options which are installed on the guide frame are not available.

3) For permissible rated short-time current I_{cc} and rated short-circuit making capacity I_{cm} for non-automatic air circuit breakers see page 1/5.

4) Current transformers for protection of the N conductor and current transformers for detection of the ground-fault current in the grounded neutral point of the transformer are to be ordered separately, see page 1/42. The internal current transformers for N conductors can be ordered by adding the supplement "–Z" and the order code "F23", see page 1/34.

5) Current transformers for protection of the N conductor are to be ordered separately, see page 1/42.

6) ETU45B to ETU76B with ground-fault protection module GFM AT (alarm and tripping), see page 1/42.

7) ETU15B cannot be used with 3WL circuit breakers, size III.

* You can order this quantity or a multiple thereof.

		6300	**B 6 3**		None

✓ Additional price

1) If ordering withdrawable circuit breaker and guide frame separately, specify order code "A05" for withdrawable circuit breaker and guide frame.

2) Not necessary for circuit breakers with very high breaking capacity C as these circuit breakers can be used as standard up to 1150 V AC.

3) Front connections are tinned as standard.

4) The permissible temperature-rise limits according to IEC 60947-2 are 5 K lower for a tin surface than for a silver surface.

* You can order this quantity or a multiple thereof.

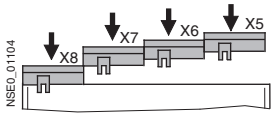
[1] Only horizontal connection and vertical connection are available for circuit breakers with very high breaking capacity C.

* You can order this quantity or a multiple thereof.

Overview

Determination of the number of auxiliary supply connectors required

This selection is only required if the guide frame is ordered under a separate Order No.



The required number of auxiliary supply connectors depends on:
- Operating mechanism type
- Electronic Trip Unit with/without current transformer
- Type and number of auxiliary releases
- Number of auxiliary switches
- COM15/COM16 communication interface

		Number of auxiliary supply connectors	Terminal
a	**First auxiliary supply connector X6 always required.**	**1**	X6
b	**Operating mechanisms**		
b1	Manual operating mechanism with stored-energy feature with mechanical closing	**0**	
b2	Manual operating mechanism with stored-energy feature with mechanical and electrical closing	**0**	X6
b3	Manual/motorized operating mechanism with stored-energy feature with mechanical and electrical closing	**+1**	X5
c	**Electronic Trip Units**		
c1	Electronic Trip Units ETU15B, ETU25B, ETU27B	**0**	
c2	Electronic Trip Units ETU45B, ETU76B (internal Cubicle**BUS**)	**+1**	X8
	Connections for external current transformers for overload protection in the N conductor and ground-fault protection		
c3	Current transformer installed in the N conductor (required with 3-pole circuit breakers if c2 is not selected)	**+1**	X8
c4	Current transformer in the neutral point of the transformer (required if c2 or c3 is not selected)	**+1**	X8
d	**Auxiliary releases**		
d1	With/without 1st auxiliary release (shunt release F1)	**0**	X6
d2	2nd auxiliary release (shunt release F2, undervoltage release F3, delayable undervoltage release F4)	**+1**	X5
e	**Auxiliary switch blocks**		
e1	1st auxiliary switch block 2 NO + 2 NC	**0**	X6
e2	1st and 2nd auxiliary switch block 4 NO + 4 NC or 6 NO + 2 NC or 5 NO + 3 NC (required if b3 or d2 is not selected)	**+1**	X5
f	**Communication modules**		
f1	Without communication module COM15/COM16	**0**	
f2	With communication module COM15/COM16 – occupies the entire terminal strip X7, making the following options no longer possible: • Tripped signal switch S24 • Stored-energy status indication S21 • Electrical ON button S10 • Signaling switch on first and second auxiliary release S22 + S23	**+1**	X7
g	**Optional signals/accessories**		
g1	Tripped signaling switch S24 (only when f2 not selected)	**+1**	X7
g2	Stored-energy status indicator S21 (only when f2 not selected, required if g1 not selected)	**+1**	X7
g3	Electric ON button S10 (only when f2 not selected, required if g1 or g2 not selected)	**+1**	X7
g4	Signaling switch at first auxiliary release S22 (only when f2 not selected, required if g1, g2 or g3 not selected)	**+1**	X7
g5	Signaling switch at second auxiliary release S23 (only when f2 not selected, required if g1, g2, g3 or g4 not selected)	**+1**	X7
g6	Switch on ready-to-close signaling switch S20	**0**	X6
g7	Motor shutdown switch S12 (only if motorized operating mechanism selected)	**0**	X5
g8	Remote reset solenoid F7 (required if c2 not selected)	**+1**	X8
h	**Total number of auxiliary supply connectors**	**(max. 4)**	

For ordering the auxiliary supply connectors see at "Accessories and spare parts, Guide frames for AC circuit breakers/non-automatic air circuit breakers", pages 1/38 to 1/41 and under "Accessories and spare parts, Auxiliary conductor connections, Auxiliary supply connectors", page 1/47.

EMC filters										
	EMC filters Common-mode interference suppressor filters (e. g. in IT networks, caused by frequency converters) Insertion loss (asymmetric) in the range 40 kHz to 10 MHz >40 dB.		Not for ETU Release 2	B	**3WL9 111-0AK32-0AA0**		1	1 unit	103	0.280
			Only for ETU Release 2	B	**3WL9 111-0AK34-0AA0**		1	1 unit	103	0.280

1) For replacement in existing circuit breakers please specify the circuit breaker ID No. when ordering.

2) With the rating plug selected, the maximum rated current $I_{n\,max}$ of the circuit breaker must not be exceeded. The following applies $I_n \leq I_{n\,max}$.

3) For direct measurement of the ground-fault current, e. g. in the neutral point of the transformer, a 1,200 A/1 A current transformer, class 1, is required. The internal load of the 3WL circuit breaker is 0.11 Ω. If the ground-fault current is to be determined using the vectorial sum of the phases, a current transformer must be installed in the neutral conductor.

* You can order this quantity or a multiple thereof.

3WL Air Circuit Breakers/Non-Automatic Air Circuit Breakers up to 6300 A (AC), IEC

Accessories and spare parts

	Designation		DT	Order No.	Price per PU	PU (UNIT, SET, M)	PS*/ P. unit	PG	Weight per PU approx. kg
Retrofitting and spare parts									
 3WL9 111-0AT15-0AA0	**PROFIBUS retrofit kits**	Retrofit kit for PROFIBUS communications including COM15, BSS and set of cables for all 3WL circuit breakers for ETU45B and ETU76B	B	**3WL9 111-0AT12-0AA0**		1	1 unit	103	0.260
	COM15 PROFIBUS module	For ETU45B and ETU76B	B	**3WL9 111-0AT15-0AA0**		1	1 unit	103	0.140
	COM16 MODBUS modules	For ETU45B and ETU76B	B	**3WL9 111-0AT17-0AA0**		1	1 unit	103	0.140
	MODBUS IEC retrofit kits	Retrofit kit for MODBUS communications including COM16, BSS and set of cables for all 3WL air circuit breakers for ETU45B and ETU76B	B	**3WL9 111-0AT18-0AA0**		1	1 unit	103	0.260
	Breaker status sensor (BSS)	For ETU45B and ETU76B	B	**3WL9 111-0AT16-0AA0**		1	1 unit	103	0.120
	Measurement function *Plus*[1)]	For ETU Release 2 (voltage transformer required)	B	**3WL9 111-0AT04-0AA0**		1	1 unit	103	0.250

All communication components, **Cubicle**BUS modules and measurement functions are available for the ETU45B and ETU76B.

1) A measuring accuracy of 3 % is reached if retrofitted.

* You can order this quantity or a multiple thereof.

	Designation		DT	Order No.	Price per PU	PU (UNIT, SET, M)	PS*/ P. unit	PG	Weight per PU approx. kg
Main conductor connections, fixed mounting (essential accessory)									
3WL9 111-0AL06-0AA0  NSE-01010	Specified for each connection								
	Front-accessible main connections, single hole at top	Size I, up to 1,000 A	B	**3WL9 111-0AL01-0AA0**		1	1 unit	103	1.100
		Size I, 1250 to 1600 A	B	**3WL9 111-0AL02-0AA0**		1	1 unit	103	1.600

		Size II, up to 2500 A	B	**3WL9 111-0AL04-0AA0**		1	1 unit	103	3.600
		Size II, up to 3200 A	B	**3WL9 111-0AL05-0AA0**		1	1 unit	103	3.500
		Size III, up to 4000 A	B	**3WL9 111-0AL06-0AA0**		1	1 unit	103	6.100
3WL9 111-0AL56-0AA0	**Front-accessible main connections, single hole at bottom**	Size I, up to 1,000 A	B	**3WL9 111-0AL51-0AA0**		1	1 unit	103	1.000
		Size I, 1250 to 1600 A	B	**3WL9 111-0AL52-0AA0**		1	1 unit	103	1.300
		Size II, up to 2000 A	B	**3WL9 111-0AL53-0AA0**		1	1 unit	103	1.800
		Size II, up to 2500 A	B	**3WL9 111-0AL54-0AA0**		1	1 unit	103	3.100
		Size II, up to 3200 A	B	**3WL9 111-0AL55-0AA0**		1	1 unit	103	3.000
		Size III, up to 4000 A	B	**3WL9 111-0AL56-0AA0**		1	1 unit	103	5.200
3WL9 111-0AL14-0AA0  NSE-01011	**Front-accessible main connections, acc. to DIN 43673, double hole at top**	Size I, up to 1,000 A	B	**3WL9 111-0AL07-0AA0**		1	1 unit	103	1.400
		Size I, 1250 to 1600 A	B	**3WL9 111-0AL08-0AA0**		1	1 unit	103	2.000
		Size II, up to 2000 A	B	**3WL9 111-0AL11-0AA0**		1	1 unit	103	2.400
		Size II, up to 2500 A	B	**3WL9 111-0AL12-0AA0**		1	1 unit	103	4.500
		Size II, up to 3200 A	B	**3WL9 111-0AL13-0AA0**		1	1 unit	103	4.400
		Size III, up to 4000 A	B	**3WL9 111-0AL14-0AA0**		1	1 unit	103	7.800
3WL9 111-0AL64-0AA0	**Front-accessible main connections, acc. to DIN 43673, double hole at bottom**	Size I, up to 1,000 A	B	**3WL9 111-0AL57-0AA0**		1	1 unit	103	1.300
		Size I, 1250 to 1600 A	B	**3WL9 111-0AL58-0AA0**		1	1 unit	103	1.700
		Size II, up to 2000 A	B	**3WL9 111-0AL61-0AA0**		1	1 unit	103	2.000
		Size II, up to 2500 A	B	**3WL9 111-0AL62-0AA0**		1	1 unit	103	3.700
		Size II, up to 3200 A	B	**3WL9 111-0AL63-0AA0**		1	1 unit	103	3.600
		Size III, up to 4000 A	B	**3WL9 111-0AL64-0AA0**		1	1 unit	103	6.400
 NSE-01012 3WL9 111-0AM03-0AA0	**Rear vertical main connections**	Size I[1], up to 1600 A	B	**3WL9 111-0AM01-0AA0**		1	1 unit	103	0.500
		Size II[2], up to 3200 A	B	**3WL9 111-0AM02-0AA0**		1	1 unit	103	2.200
		Size III, up to 6300 A	B	**3WL9 111-0AM03-0AA0**		1	1 unit	103	5.000

1) In the case of vertical connection size I, up to 1000 A one 3WL9 111–0AM01-0AA0 vertical connection is required, up to 1600 A two 3WL9 111-0AM01-0AA0 vertical connections are required.

2) In the case of vertical connection size II, up to 2500 A one 3WL9 111–0AM02-0AA0 vertical connection is required, up to 3200 A two 3WL9 111-0AM02-0AA0 vertical connections are required.

Air Circuit Breakers

		Size III, up to 6300 A, at top (4 busbar connection pieces for 4-pole circuit breakers)	B	**3WL9 111-0AN20-0AA0**		1	1 unit	103	18.410
		Size III, up to 6300 A, at bottom (4 busbar connection pieces for 4-pole circuit breakers)	B	**3WL9 111-0AN10-0AA0**		1	1 unit	103	18.300
	Rear horizontal main connections	Size I, up to 1,000 A	B	**3WL9 111-0AN32-0AA0**		1	1 unit	103	0.630
		Size I, 1250 to 1600 A	B	**3WL9 111-0AN33-0AA0**		1	1 unit	103	0.770
		Size II, up to 2000 A	B	**3WL9 111-0AN34-0AA0**		1	1 unit	103	1.020
		Size II, up to 2500 A	B	**3WL9 111-0AN35-0AA0**		1	1 unit	103	1.240
		Size II, up to 3200 A	B	**3WL9 111-0AN36-0AA0**		1	1 unit	103	2.170
		Size III, up to 5,000 A	B	**3WL9 111-0AN37-0AA0**		1	1 unit	103	3.860
 NSE-01016 3WL9 111-0AN24-0AA0	**Connecting flanges**	Size I, up to 1,000 A	B	**3WL9 111-0AN24-0AA0**		1	1 unit	103	0.610
		Size I, 1250 to 1600 A	B	**3WL9 111-0AN25-0AA0**		1	1 unit	103	0.640
		Size II, up to 2000 A	B	**3WL9 111-0AN26-0AA0**		1	1 unit	103	0.980
		Size II, up to 2500 A	B	**3WL9 111-0AN27-0AA0**		1	1 unit	103	1.020
		Size II, up to 3200 A	B	**3WL9 111-0AN28-0AA0**		1	1 unit	103	1.310
		Size III, up to 4000 A	B	**3WL9 111-0AN31-0AA0**		1	1 unit	103	2.370

[1)] When using front-accessible main connections (withdrawable circuit breakers) supports are required.

* You can order this quantity or a multiple thereof.

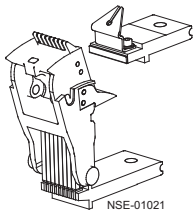
Conversion sets

For converting fixed-mounted circuit breakers into withdrawable circuit breakers
Guide frames and sliding contact modules must be ordered separately.

Number of poles	Size	DT	Order No.	Price per PU	PU (UNIT, SET, M)	PS*/ P. unit	PG	Weight per PU approx. kg
3-pole	I	B	**3WL9 111-0BC11-0AA0**		1	1 unit	103	5.100
	II	B	**3WL9 111-0BC12-0AA0**		1	1 unit	103	5.900
	III	B	**3WL9 111-0BC13-0AA0**		1	1 unit	103	8.100
4-pole	I	B	**3WL9 111-0BC14-0AA0**		1	1 unit	103	6.400
	II	B	**3WL9 111-0BC15-0AA0**		1	1 unit	103	6.450
	III	B	**3WL9 111-0BC16-0AA0**		1	1 unit	103	10.700

Main contact elements

You must specify the circuit breaker ID No. when ordering!
Specified for each connection (depending on the number of poles on the circuit breaker, order 3 or 4 units)



NSE-01021

Sizes	$I_{n\,max}$	DT	Order No. is automatically adapted to the circuit breaker ID number	Price per PU	PU (UNIT, SET, M)	PS*/ P. unit	PG	Weight per PU approx. kg
I	Up to 1600 A	B	**3WL9 111-0AM90 L1Y**[1)]		1	1 unit	103	2.800
II	Up to 2500 A	B	**3WL9 111-0AM91 L1Y**[1)]		1	1 unit	103	5.870
II	Up to 4000 A	B	**3WL9 111-0AM92 L1Y**[1)]		1	1 unit	103	7.700
III	Up to 6300 A	B	**3WL9 111-0AM93 L1Y**[1)]		1	1 unit	103	13.740

1) Please specify the circuit breaker ID No. in plain text when ordering.

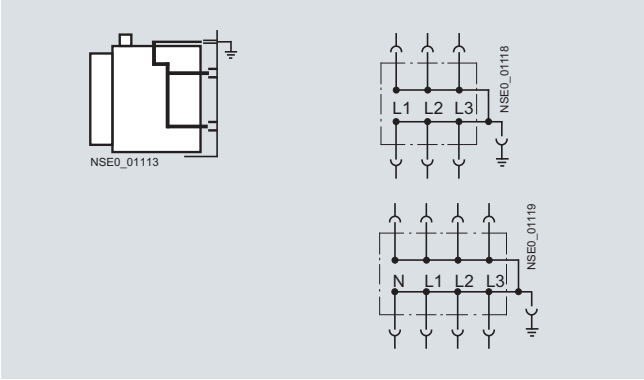
Air Circuit Breakers

3WL Air Circuit Breakers/Non-Automatic Air Circuit Breakers up to 6300 A (AC), IEC

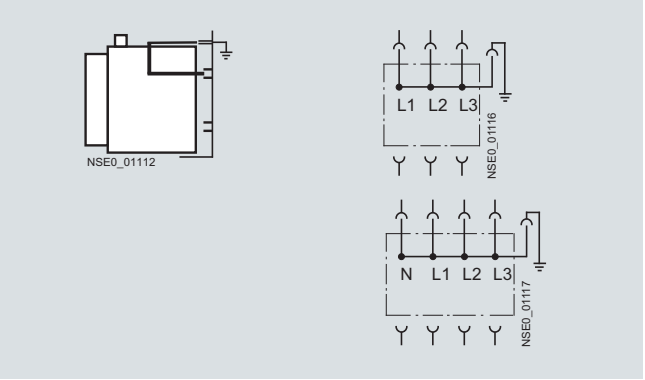
Accessories and spare parts

Circuit diagram in as-supplied state	Version	Size	DT	Order No.	Price per PU	PU (UNIT, SET, M)	PS*/ P. unit	PG	Weight per PU approx. kg
Withdrawable short-circuiting, grounding and bridging units									
  (as-supplied state) 	Top and bottom system components are short-circuited and grounded	3-pole							
		Up to 1600 A	I	C	**3WL9 111-0BD01-0AA0**	1	1 unit	103	30.000
		Up to 3200 A	II	C	**3WL9 111-0BD03-0AA0**	1	1 unit	103	40.500
		Up to 6300 A	III	C	**3WL9 111-0BD05-0AA0**	1	1 unit	103	65.000
		4-pole							
		Up to 1600 A	I	C	**3WL9 111-0BD02-0AA0**	1	1 unit	103	35.000
		Up to 3200 A	II	C	**3WL9 111-0BD04-0AA0**	1	1 unit	103	46.000
		Up to 6300 A	III	C	**3WL9 111-0BD06-0AA0**	1	1 unit	103	70.000

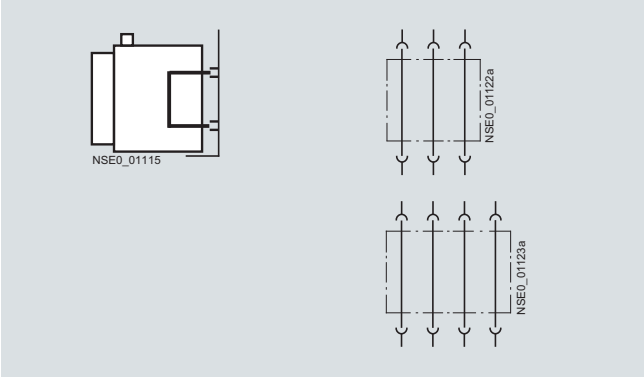
Conversion for the following applications is possible



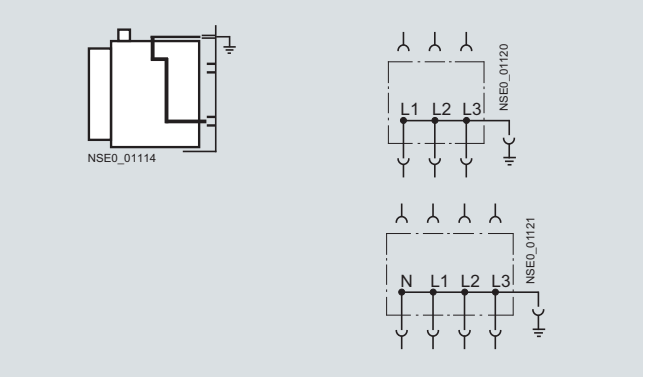
Top and bottom system components are short-circuited and grounded (as-supplied state)



Top system component is short-circuited and grounded, infeed from bottom



Withdrawable bridging unit, infeed and outgoing sides are permanently connected to each other



Bottom system component is short-circuited and grounded, infeed from top

* You can order this quantity or a multiple thereof.

Options

Structure of the Order No.

3WL1 2 2 0 – 4 N G 3 1 – 1 F A 2

Example

5th position:	Size	Size II
6th and 7th position:	Max. rated circuit breaker current $I_{n\,max}$	$I_{n\,max}$ = 2000 A
8th position:	Breaking capacity class	High breaking capacity "H": 100 kA
9th position:	Electronic Trip Units	ETU76B with graphics display
		...
10th position:	Electronic Trip Unit supplement	... with ground-fault protection
11th position:	Number of poles	Three-pole
12th position:	Installation type	Fixed mounting, main connections on rear, vertical
13th position:	Operating mechanism	Manual operating mechanism with mechanical closing
14th position:	1st auxiliary release	Shunt release 50/60 Hz 110 V AC
15th position:	2nd auxiliary release	Without 2nd auxiliary release
16th position:	Auxiliary switches	2 NO contact + 2 NC contact

An important prerequisite for computer-based order processing is that order numbers must be structured according to standardized criteria.

They are used as an unambiguous means of communication for various purposes:

- Offer processing
  Selection and configuration
- Order processing
  Orders
  Order confirmation
  Processing of products for storage
  Order processing in supply locations
  Supply and dispatch
- Reporting and planning
- Service and warranty

The standardized structure ensures that only one Order No. has to be administered for one device.

This saves time and effort during planning, configuring, ordering and stock keeping, and consequently above all it saves costs.

The example opposite explains the various positions within an Order No.

Accessories: with first order (components are already mounted)

Example

3WL1 2 1 6 – 4 J G 3 1 – 1 F A 3 – Z F 0 2

"–Z" with order code	Communications interface "Standard" + Breaker Status Sensor (BSS) + communication module COM15 for connection to PROFIBUS DP

Additional accessory components can be ordered ready-mounted.

These supplements are identified by **"–Z"**.

Even with additional components, one Order No. is sufficient.

Accessories: for retrofitting (components for subsequent fitting)

Example

3WL9 1 1 1 – 0 B A 2 1 – 0 A A 0

Interlocking set for mechanical ON/OFF without lock

Additional accessories which are not intended to be ready-mounted in the factory, such as spare parts for storage, can also be ordered separately from the circuit breaker.

Accessories for retrofitting are identified by the Order No. stem 3WL9.

without Electronic Trip Unit			**AA**	None				
Standard Order No. supplements (for further Order No. supplements, see page 1/31)								
Manual operating mechanism with mechanical closing			**1AA2**	None				

Add **"–Z"** to the complete Order No. and indicate the appropriate order code(s).		Order No. with "–Z" and additional order code	Additional price 3-pole	Additional price 4-pole
		1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 **3WL1 2 . 0 – 8 . . . . – . . . . –Z** □□□		
Rated voltage 1000 V DC				
Size II	Up to 2000 A	**A 0 5**	✓	✓
Size II	Up to 4000 A	**A 0 5**	✓	✓

Note:

For voltages over 600 V use the version for 1000 V DC rated voltage: Order with "-Z" and order code "A05".

All other accessory parts must be ordered by specifying "–Z" and the corresponding order code, see "3WL Air circuit breakers/non-automatic air circuit breakers up to 6300 A (AC), IEC", "Options", page 1/32 onwards.

An external overload and short-circuit protection device is available from the company "mat" for the 3WL non-automatic air circuit breakers.
Available only directly from the company mat – Maschinen- und Anlagentechnik (for address see page 1/60).

✓ Additional price

[1] Provisions to dissipate heat must be made on the line side.

[2] For permissible rated short-time current I_{cw} and short-circuit breaking capacity I_{cc} for non-automatic air circuit breakers, see page 1/5.

* You can order this quantity or a multiple thereof.

Overview

Devices		Page	Applications/individual components	Standards	Used in		
					Non-residential buildings	Residential buildings	Industry
	**3VL molded case circuit breakers for system protection**	2/10 ... 2/25, 2/34 ... 2/51	The overload and short-circuit releases are designed for the protection of cables, leads and non-motor loads.	IEC 60947-1, EN 60947-1, IEC 60947-2, EN 60947-2.	✓	✓	✓
	**3VL molded case circuit breakers for motor protection** **3VL molded case circuit breakers for generator protection**	2/26 ... 2/29	Circuit breakers for motor protection are specifically designed for the characteristic curve of the motor, and have additional function such as phase failure detection and adjustable trip class. The overload and short-circuit releases can be used for optimized protection of generators.	IEC 60947-1, EN 60947-1, IEC 60947-2, EN 60947-2.	✓	✓	✓
	**3VL molded case circuit breakers for starter protection**	2/30, 2/31	Starter combinations consist of: Motor starter protector + contactor + overload relay. The motor starter protector provides short-circuit protection and the isolating function. The task of the contactor is the operational switching of the feeder. The overload relay provides overload protection, which is specifically designed for the motor.	IEC 60947-1, EN 60947-1, IEC 60947-2, EN 60947-2.	✓	✓	✓
	**3VL non-automatic circuit breakers, compact**	2/30, 2/31, 2/52, 2/53	These circuit breakers are used as feeder circuit breakers, main control switches or disconnectors without overload protection. They have fixed short-circuit releases.	IEC 60947-1, EN 60947-1, IEC 60947-2, EN 60947-2. Isolating features acc. to IEC 60947-2 and EN 60947-2.	✓	✓	✓
 NSE0_00684	**Auxiliary switches and auxiliary releases for 3VL molded case circuit breakers**	2/59, 2/60	Auxiliary switches, alarm switches, undervoltage releases and shunt releases	As for circuit breakers	✓	✓	✓
 NSE0_00679	**Operating mechanisms**	2/62 ... 2/69	The manual operating mechanisms are available in two versions: • Front-operated rotary operating mechanisms, • Door-coupling rotary operating mechanism In the case of the motorized operating mechanisms there are also two versions: • MO for standard applications • SEO for network synchronization tasks	As for circuit breakers	✓	✓	✓
 NSE0_00717	**Plug-in versions/ withdrawable versions**	2/70 ... 2/75	Assembly in plug-in and withdrawable versions allows the 3VL molded case circuit breaker to be replaced quickly without accessing the terminals.	As for circuit breakers	✓	✓	✓

Devices		Page	Applications/individual components	Standards	Used in		
					Non-residential buildings	Residential buildings	Industry
 NSE0_00583	**RCD modules**	2/76	Protection of plant and personnel against damage or injury caused by residual currents and insulation faults.	As for circuit breakers	✓	✓	✓
 NSE0_00702	**Connection parts for fixed-mounted circuit breakers**	2/77 ... 2/82	Front connecting bars, rear terminals, box terminals, circular conductor terminals, multiple feed-in terminals, auxiliary conductor terminals, terminal plates, connections with screw terminals, terminal covers for circuit breakers, phase barriers for circuit breakers	As for circuit breakers	✓	✓	✓
 NSE0_00734	**Interlocks**	2/83 ... 2/88	Locking devices for toggle levers, rear interlocking modules, interlocking modules for Bowden wire interlocking	As for circuit breakers	✓	✓	✓
	**40 mm busbar systems and 60 mm busbar systems**	2/89, 2/90	Busbar adapters	As for circuit breakers	✓	✓	✓
 NSE-00574	**Further accessories**	2/94 ... 2/97	Masking frames (cover frames) for door cutouts, to increase degree of protection	As for circuit breakers	✓	✓	✓
 NSE0_02130	**Accessories for communication**	2/98	Data transmission through COM20, COM21: COM20 (PROFIBUS) for releases with communication function, COM21 (MODBUS) for releases with communication function, Switch ES Power parameterization software	As for circuit breakers	✓	✓	✓

Introduction

Benefits

- The compact design of the 3VL molded case circuit breakers coupled with excellent characteristics fulfills the high demands of today's electrical distribution systems.
- These circuit breakers offer a broad product range, improved technology, space savings and easy operation.
- They are available both in thermal-magnetic (16 A to 630 A) and in electronic versions (63 A to 1,600 A).

Communication

The use of modern communication-capable circuit breakers opens up completely new possibilities in terms of start-up, parameterization, diagnostics, maintenance and operation. This allows many different ways of reducing costs and improving productivity in industrial plants, buildings and infrastructure projects to be achieved:

- Fast and reliable parameterization
- Timely information and response can prevent plant stoppages
- Effective diagnostics management

Measured values are the basis for efficient load management, for drawing up power demand profiles and for assigning power to cost centers.

Communication:

- For molded case circuit breakers with communication function see pages 2/14 to 2/30, 2/42 to 2/52.
- For accessories, see page 2/93.
- For more information see also chapters "Measuring Devices and Power Management" and "Software".

Applications

The different versions of 3VL molded case circuit breakers are suitable for the following applications:

- Incoming and outgoing circuit breakers in distribution systems
- Switching and protection devices for motors, transformers and capacitors
- Disconnector units with features for stopping and switching off in an emergency (main control switches and EMERGENCY-STOP switches) in conjunction with lockable rotary operating mechanisms and terminal covers.

The 3VL molded case circuit breakers are available in the following versions:

1. For system protection (in 3- and 4-pole versions)
   The overload and short-circuit releases are designed for the protection of cables, leads and non-motor loads.
2. For motor protection (in 3-pole version)
   The overload and short-circuit releases are designed for optimized protection and direct-on-line starting of induction squirrel-cage motors. The circuit breakers for motor protection are susceptible to phase failure and feature an adjustable trip class. The Electronic Trip Units operate with a microprocessor.
3. For starter combinations (in 3-pole version)
   These circuit breakers are used both for short-circuit protection as well as for isolating functions, which may be required in starter combinations consisting of circuit breakers, overload relays and motor contactors. These circuit breakers exclusively feature adjustable, instantaneous short-circuit releases.
4. As non-automatic air circuit breakers (in 3- and 4-pole versions)
   These circuit breakers can be used as feeder circuit breakers, main control switches or non-automatic circuit breakers without overload protection. They incorporate an integrated short-circuit self-protection system, eliminating the need for back-up fuses.

Breaking capacity

(N)	Circuit breakers with standard breaking capacity N (I_{cu} up to 55 kA at 415 V)
(H)	Circuit breakers with high breaking capacity H (I_{cu} up to 70 kA at 415 V)
(L)	Circuit breakers with very high breaking capacity L (I_{cu} up to 100 kA at 415 V)
	These breaking capacities are indicated in the corresponding tables by the symbols shown on orange backgrounds.

Standards and specifications

3VL molded case circuit breakers comply with:

IEC 60947-1, EN 60947-1,
DIN VDE 0660, Part 100,
IEC 60947-2, EN 60947-2,
DIN VDE 0660, Part 101.
Isolating features according to IEC 60947-2, EN 60947-2.

Disconnecting features (main control switches) according to EN 60204 and DIN VDE 0113.
The 3VL molded case circuit breakers comply in addition with requirements for "disconnector units with features for stopping and switching off in an emergency" (EMERGENCY-STOP switches) in conjunction with lockable rotary operating mechanisms (red-yellow) and terminal covers.

Please contact Siemens for details of other standards.

The Electronic Trip Units of the circuit breakers for motor protection also fulfill IEC 60947-4-1, DIN VDE 0660, Part 102.

VL160X to VL400 circuit breakers can be equipped with a 3VL RCD module. They then comply with IEC 60947-2 Appendix B.

The 3VL RCD module complies with IEC 61000-4-2 to IEC 61000-4-6, IEC 61000-4-11 and EN 55011, Class B (equivalent to CISPR 11) with regard to electromagnetic compatibility.

Operating conditions

The 3VL molded case circuit breakers are designed for operation in enclosed areas.

Suitable enclosures must be provided for operation in areas with severe ambient conditions (such as dust, caustic vapors, hazardous gases).

RCD modules

The RCD module is designed for retrofitting to the circuit breaker. It can also be retrofitted by the customer.

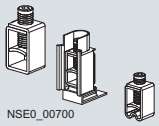
The combination of 3VL molded case circuit breaker and RCD module can be fed from the top or bottom.

All 3VL molded case circuit breakers with RCD modules are available with auxiliary switches, alarm switches, undervoltage and shunt releases.

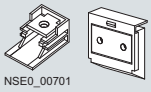
Protection of plant and equipment against overload or damage by ground faults (ground-fault protection).

The RCD module trips the circuit breaker through vectorial summation current formation for all phase currents if the vectorial sum of the currents in the poles (= the ground fault current) overshoots the pre-set response and delay time values. AC currents and pulsating DC currents are measured (CBR, design A according to EN 60947-2).

Main connections, basic equipment and options

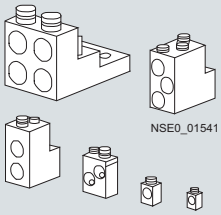


Box terminal
(for copper cables or solid/flexible busbars)



Connection with screw terminal (available with direct cable lug connection on VL160X, VL160, VL250, VL400)

Connection to front busbar connecting bars (screw terminal required)



Circular conductor terminals multiple feed-in terminal (for Al/Cu terminal)

Main connections (for conductor cross-sections see below)

Circuit breaker	Connection overview and further options				
	Box terminals	Screw terminals with metric thread for flat connection	Circular conductor terminal/multiple feed-in terminals	Rear terminals	Front-accessible connecting bars

Ground-fault protection
① Vectorial summation current formation (3-conductor system)
② Vectorial summation current formation (4-conductor system)
③ Direct detection of ground-fault current in the neutral point of the transformer

✓ Function is available.
-- Function not available.

1) Size dependent.
2) TM up to I_n = 630 A.
3) Motor protection up to I_n = 500 A.
4) With COM20/COM21.

✓ Additional price

-- Not available

1) Except for installation in the left accessory compartment of the VL160X molded case circuit breakers with RCD module.

2) With mounting adapter up to 3 HS.

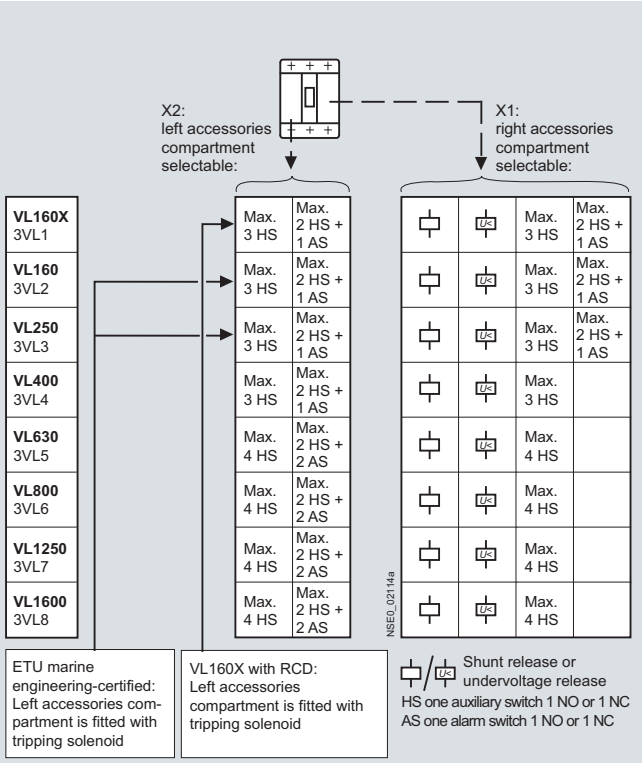
3) With mounting adapter up to 2 HS + 2 AS.

4) Not feasible for use of marine engineering ETU and additional use of shunt and undervoltage releases.
When using a communication-capable ETU, the accessory compartment X2 is fitted with an auxiliary switch and an alarm switch. The combination of 1st and 2nd Order No. supplement is only possible with restrictions. It is recommended to use the configurator in the Mall for selection purposes.

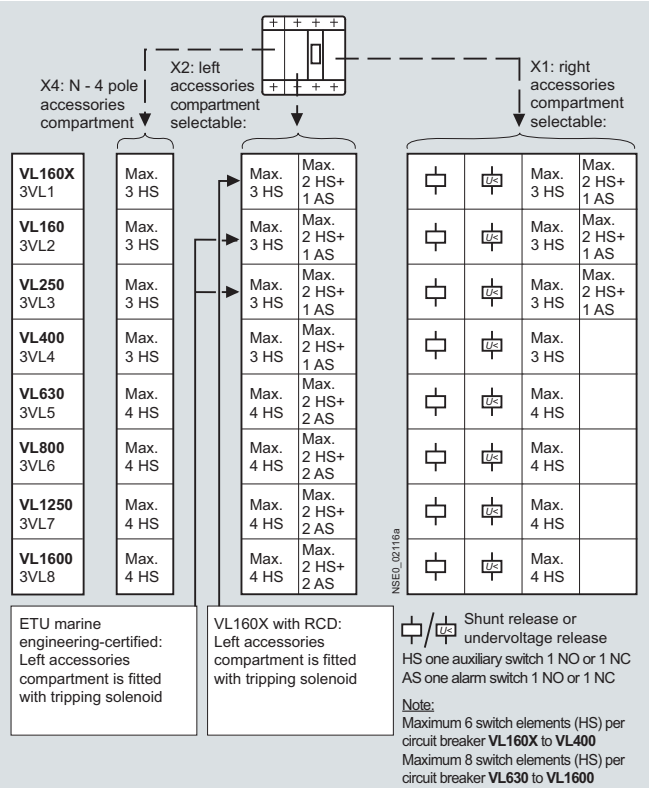
5) Not possible when using a communication-capable ETU.

Equipment options for the insulated accessory compartments in the 3VL molded case circuit breakers

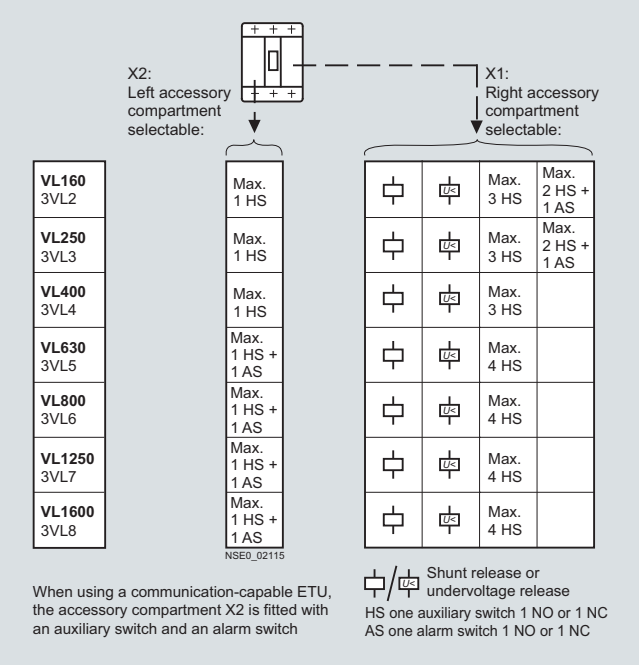
3-pole circuit breakers without communication preparation



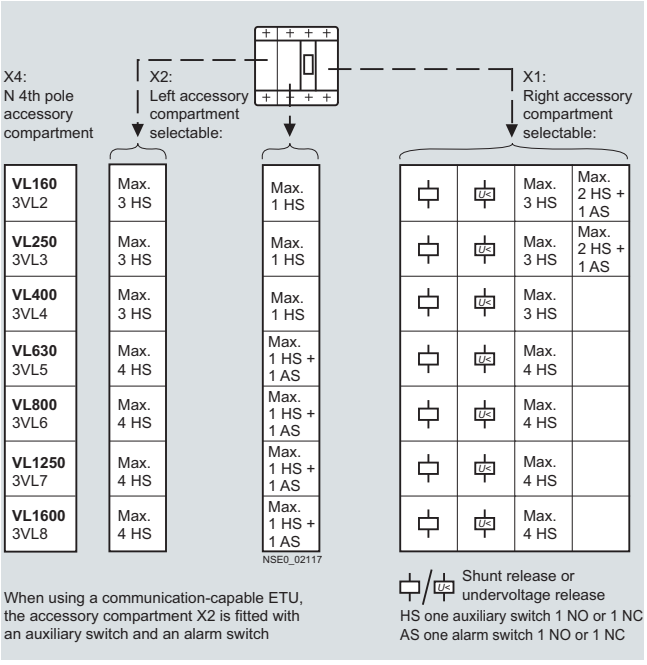
4-pole circuit breakers without communication preparation



3-pole circuit breakers with communication preparation



4-pole circuit breakers with communication preparation



Note:

Before ordering, use the tables above to check whether the required combination of shunt releases, undervoltage releases and auxiliary/alarm switches is feasible.

	2 HS + 2 AS		**--**					

[1] Except for installing in the left pole for VL160X (3VL1) molded case circuit breakers with RCD module.

[2] In the case of VL400: 3VL9 400-2AJ20 unsuitable for mounting in the right-hand accessory compartment.

For auxiliary/alarm switches	DT	Circuit breakers Type **VL160X to VL1600 (3VL1 to 3VL8)** Order No.	Price per PU	PU (UNIT, SET, M)	PS*/ P. unit	PG	Weight per PU approx. kg
Switching blocks for auxiliary and alarm switch combinations							
1 NO	B	**3SB34 00-0J**		1	1 unit	41J	0.010
1 NC	B	**3SB34 00-0K**		1	1 unit	41J	0.010

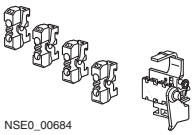
For auxiliary switch or alarm switch combinations not included in the kits provided as standard, the mounting adapters specified can be ordered separately together with the required contact blocks:

1 HS or 1 AS with NO contact 3SB34 00-0J
1 HS or 1 AS with NC contact 3SB34 00-0K

Note:

A maximum of 6 contact blocks (HS) per circuit breaker (VL160X, VL160, VL250, VL400; 3VL1 to 3VL4) and a maximum of 8 contact blocks (HS) per circuit breaker (VL630, VL800, VL1250, VL1600; 3VL5 to 3VL8) are possible.

Four 3SB34 auxiliary contact blocks and one mounting adapter (right), suitable for VL630, VL800, VL1250, VL1600 (3VL5 to 3VL8) circuit breakers.



NSE0_00684

For retrofitting/possible complement see Technical Information at www.siemens.com/lowvoltage/support.

Operating mechanisms								
	3- or 4-pole							
 3VL9 .00-3H.00	**Front-operated rotary operating mechanisms** For direct mounting on the circuit breaker, without leading auxiliary switch, degree of protection IP30[1], black, max. 3 padlocks	A	**3VL9 600-3HA00**		1	1 unit	113	0.834
	EMERGENCY-STOP version Red knob, yellow indicator plate	A	**3VL9 600-3HC00**		1	1 unit	113	0.834
	Safety locks for installation by the customer see pages 2/86 to 2/90.							
	Front-operated rotary operating mechanisms with shaft stub, without knob without leading auxiliary switch, for auxiliary switches see below.	A	**3VL9 600-3HE00**		1	1 unit	113	0.755
 3VL9 .00-3H.05	**Door-coupling rotary operating mechanisms, complete, installation in doors and covers** Degree of protection IP65, including handle, ti-grey, with masking plate, indicator plate, detachable door coupling (die cast, for VL800 (3VL6) with reduced tolerance compensation), extension shaft (8 × 8 mm for VL800 (3VL6), 12 × 12 mm for VL1250 (3VL7) and VL1600 (3VL8), length 300 mm and front-operated rotary operating mechanism for the respective circuit breaker, lockable with max. 3 padlocks, with door interlocking	A	**3VL9 600-3HF05**		1	1 unit	113	2.465
	EMERGENCY-STOP version, Red knob, yellow indicator plate, without leading auxiliary switch	A	**3VL9 600-3HG05**		1	1 unit	113	2.460
	Safety locks for installation by the customer see pages 2/86 to 2/90.							
 3VL9 .00-3A.10	**Leading auxiliary switches for installation in a front-operated rotary operating mechanism or door-coupling rotary operating mechanism** Standard or EMERGENCY-STOP version							
	"OFF after ON" Leading auxiliary switches when switching on							
	1 changeover contact with 1.5 m long cables	A	**3VL9 600-3AS10**		1	1 unit	113	0.080
	2 changeover contacts with 1.5 m long cables	A	**3VL9 600-3AT10**		1	1 unit	113	0.130
	"ON after OFF" Leading auxiliary switches when switching off							
	1 changeover contact with 1.5 m long cables	A	**3VL9 600-3AU10**		1	1 unit	113	0.080
	2 changeover contacts with 1.5 m long cables	A	**3VL9 600-3AW10**		1	1 unit	113	0.130
	Retaining brackets suitable for matching door-coupling rotary operating mechanisms, complete							
	Retaining bracket is mounted on the operating mechanism, recommended for extension shafts >250 mm	A	**3VL9 600-3HP00**		1	1 unit	113	0.437

Additional accessories and components for door-coupling rotary operating mechanism, see 2/69 and 2/71.

[1] IP40 with additional masking frame mounted on the door cutout.

Trip pins and springs							
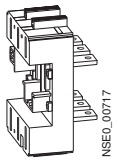
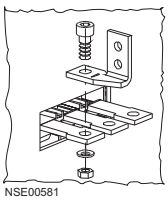
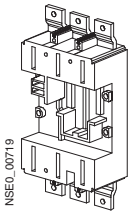
As replacement for plug-in/withdrawable circuit breaker	A	**3VL9 400-4PF00**		1	1 unit	113	0.015
Auxiliary circuit plug connections for plug-in bases Accessory connections for plug-in circuit breakers (factory-wired connectors) and for plug-in bases or withdrawable version (coupling with screw terminal)		[2]					
8 terminals	A	**3VL9 400-4PJ00**		1	1 unit	113	0.144
Position signaling switches (connected/disconnected position) For plug-in/withdrawable base, 1 changeover contact, max. 2 signaling switches possible	A	**3VL9 000-4WL00**		1	1 unit	113	0.019



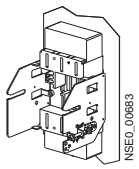
3VL9 .00-4PA30



3VL9 .00-4PE30



3VL9 .00-4WF30



3VL9 .00-4WA30

1) For 3-pole applications please use 4-pole withdrawable version with 4-pole RCD module and 4-pole circuit breaker.

2) It is recommended to use a maximum of 3 auxiliary circuit plug-in systems per circuit breaker (24 terminals).

3) With VL800 (3VL6) to VL1600 (3VL8) as vertical connection.

* You can order this quantity or a multiple thereof.

Busbar adapter systems with 40 mm or 60 mm busbar center-to-center spacing with components for busbar runs, adapters and switching device holders for individual equipment possibilities, devices with an integrated adapter, as well as accessories and flat copper profiles. Observe the short-circuit strength of the busbar system. Short-circuit strength greater than 50 kA on request.

See also chapter "Busbar Systems".

	Version	DT	Order No.	Price per PU	PU (UNIT, SET, M)	PS*/ P. unit	PG	Weight per PU approx. kg
40 mm busbar adapter systems								
According to DIN 43870 Part 2 for copper busbars with sharp (DIN 1759) and with rounded (DIN 46433) edges, width 12 mm and 15 mm, thickness 5 mm and 10 mm.								
	Up to 160 A **Busbar adapters**, length 175 mm With plug connection tags at top, 3-pole With terminal cover (degree of protection IP10)[1] For one VL160X (3VL1) circuit breaker[2] 108 mm wide	A	**8US10 11-4SL01**		1	1 unit	143	0.585

[1] For degree of protection IP30, the terminal covers from page 2/79 to 2/84 should be ordered.

[2] Usable only for 3VL circuit breakers with line-side box terminals.

* You can order this quantity or a multiple thereof.

	Version		DT	Order No.	Price per PU	PU (UNIT, SET, M)	PS*/ P. unit	PG	Weight per PU approx. kg
60 mm busbar adapter systems									
For copper busbars with sharp (DIN 1759) and with rounded (DIN 46433) edges, width 12 mm to 30 mm, thickness 5 mm and 10 mm, also for T and double-T special profiles									
 8US12 11–4SL01	***Up to 160 A*** **Busbar adapters**, length 175 mm With plug connection tags at top, 3-pole With terminal cover (degree of protection IP10)[1]								
	For one VL160X/VL160 (3VL1, 3VL2) circuit breaker[2]	108 mm wide	A	**8US12 11-4SL01**		1	1 unit	143	0.597
	Up to 250 A **Busbar adapters**, length 175 mm With plug connection tags at top, 3-pole With terminal cover (degree of protection IP10)[1]								
	For one VL250 (3VL3) circuit breaker	108 mm wide	A	**8US12 11-4SL00**		1	1 unit	143	0.662
 8US12 10–4AF00	***Up to 400 A*** **Busbar adapters**, length 320 mm With threaded inserts M4, M6 and M8 For various types of switchgears, 3-pole Without connecting cables, with M10 terminal screws at top and bottom[1]								
	Adapter	185 mm wide	A	**8US12 10-4AF00**		1	1 unit	143	2.769
	Mounting plates for 8US12 10–4AF00								
	For VL400 (3VL4) circuit breakers (also for VL160X+RCD, VL160, VL250 circuit breakers (3VL1 + RCD, 3VL2, 3VL3))		A	**8US19 27-4AF01**		1	1 unit	143	0.575
	For VL630 (3VL5) circuit breakers ($I_{n\,max}$ = 580 V)		A	**8US12 13-4AF00**		1	1 unit	143	2.880
	The connecting cable between adapter and switching device should be manufactured in accordance with the rated current as a round cable, e. g. H07V-R, with a cable lug or as a flat conductor for bolt-type connection M10 (adapter).								

[1] For degree of protection IP30, the terminal covers from page 2/79 to 2/84 should be ordered.

[2] Usable only for 3VL circuit breakers with line-side box terminals.

General criteria for the selection of current transformers for measurement purposes

4NC53 current transformers

Standards	IEC 60185, DIN VDE 0414 Parts 1 and 2
Window-type current transformers	The conductor to be measured (busbar or cable) is passed through the window opening and constitutes the primary circuit of the window-type current transformer. Pin-wound transformers: An economical solution especially for small primary currents of 5 ... 75 A are window-type current transformers when the conductor to be measured is pin-wound several times.
Rated primary current I_{pn}	Current transformers can be continuously loaded with 1.3 times the rated primary current (I_{pn}).
Rated secondary current I_{sn}	
1 A	Particularly suitable for longer measuring leads. Cable losses of only 4 % in contrast to 5 A current transformers.
5 A	5 A current transformers generate 25 times the power losses on measuring leads as compared with 1 A current transformers. These stray losses result in higher power in the case of long cables. Only recommended for use with short measuring leads.
Accuracy class	
Class 1	Operation measurement, internal metering Current error ±1 % at 1 x I_{pn} and 1.2 x I_{pn}
Class 3	Coarse measurement Current error ±3 % at 0.5 x I_{pn} and 1.2 x I_{pn}
Rated power P_n	The rated power of transformers is specified in VA. The actual load rating should be similar to the rated power; a lower actual load rating (underburden) increases the overcurrent factor and measuring devices are not sufficiently protected in case of a short-circuit, a higher actual load rating (overburden) has a negative effect on the accuracy. With a frequency of 60 Hz the rated power increases to 1.2 times. With $16^2/_3$ Hz the output power decreases to $^1/_3$ of the rated power.
Maximum voltage for equipment U_m	This is the rms value of the maximum voltage between the conductors of a system. For this voltage the insulation must be rated at normal operating conditions. 4NC5 current transformers are suitable for 720 V.
Overcurrent limiting factor FS	The overcurrent limiting factor is expressed using the characters FS and a factor, e. g. FS5 or FS10. When a short-circuit current flows through the primary winding of a current transformer, the stress on the measuring devices connected to the current transformer is the lower the smaller the overcurrent limiting factor is.
Rated short-time thermal current I_{th}	The rated short-time thermal current I_{th} is the rms value of the primary current with a duration of one second, whose heat effect the current transformer can resist without being damaged in the event of a short-circuited secondary winding.
Rated impulse current I_{dyn}	The rated impulse current I_{dyn} is the highest instantaneous value of the current after a short circuit whose force the current transformer can resist without being damaged. The rated impulse current is specified as peak value.

4NC51 window-type current transformers, used as pin-wound transformers, Classes 1 and 3, from 5 A to 75 A

Pin-winding increases the primary current of the current transformer. Consequently, window-type current transformers can also be used for low primary currents.

Overview

	Devices	Page	Field of application	Standards	Used in		
					Non-residential buildings	Residential buildings	Industry
	**5SL miniature circuit breakers**	3/4	For all 0.3 to 63 A applications with B and C tripping characteristics with a rated breaking capacity of 4500 A and 6000 A acc. to EN 60898-1.	EN 60898-1	✓	✓	--
	**5SY and 5SP miniature circuit breakers**	3/10	For all applications from 0.3 to 125 A with a rated breaking capacity of 10000 A and 15000 A acc. to EN 60898-1. Applications for universal current from 0.3 to 63 A, Version 25 kA, acc. to EN 60947-2.	EN 60898-1/-2 EN 60947-2 UL 1077 CSA 22.2 GB 10963.1/.2	--	✓	✓
	**5SJ6 . . . - . KS miniature circuit breakers with plug-in terminals**	3/26	For socket outlet and lighting circuits in all building installations. The plug-in terminals offer easy front connection for manual insertion of conductors, which considerably reduces mounting times.	EN 60898-1	✓	✓	--
	**5SY miniature circuit breakers, 1+N in 1 MW**	3/29	For socket outlet and lighting circuits in all building installations where a switchable neutral conductor is required. The miniature circuit breaker 1+N saves space in the distribution board.	EN 60898-1	✓	✓	✓
	**Additional components**	3/32	Auxiliary switches, fault signal contacts, shunt trips, undervoltage releases for higher plant availability, RC units for personal safety and remote controlled mechanisms for remote switching.		✓	--	✓
	**Busbars**	3/40	Busbars in 10 mm² and 16 mm² save space in the distribution board and time during mounting. Busbars in 18 mm² and 25 mm² acc. to UL 508 and CSA.	UL 508	✓	✓	✓
	**5SJ4 . . .-.HG miniature circuit breakers acc. to UL 489 and IEC, and accessories**	3/53	Miniature circuit breakers can be used as "branch circuit protection" and are approved for the connection type "same polarity" and "opposite polarity" in the characteristics B, C and D acc. to UL489, from 0.3 to 63 A.	UL 489	✓	✓	✓

Devices		Page	Field of application	Standards	Used in		
					Non-residential buildings	Residential buildings	Industry
	**SHU 5SP3 main miniature circuit breakers**	3/62	Voltage-independent selective main miniature circuit breakers (SHU) in the precounter sector support downstream miniature circuit breakers by providing better current limitation.	DIN VDE 0641-21	✓	✓	--
	**5SK9 circuit breaker terminals**	3/65	Circuit breaker terminals are used for short-circuit protection or for protection against overload and short circuits in auxiliary and control circuits down-stream of control transformers.		--	--	✓

Introduction

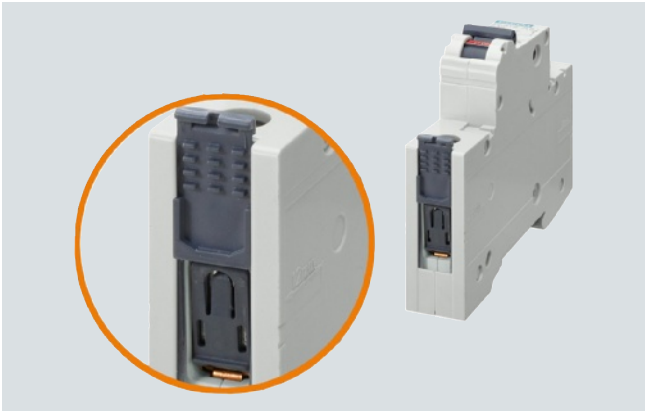
Overview

The 5SL miniature circuit breaker is intended for use up to 6 kA.

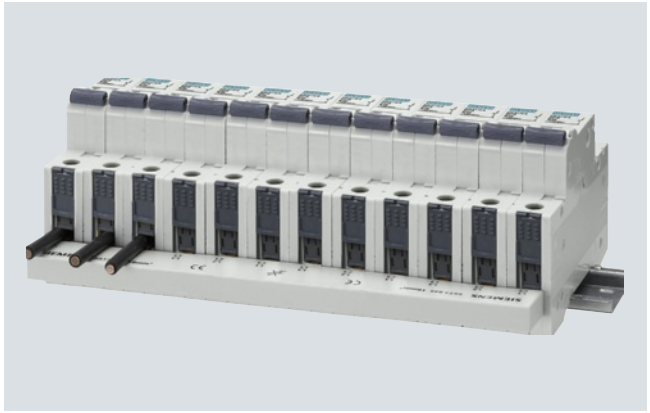
The 5SL miniature circuit breakers can be used as main switches for the disconnection or isolation of plants.

They are also suitable for the quick and easy mounting of additional components, such as auxiliary switches and fault signal contacts.

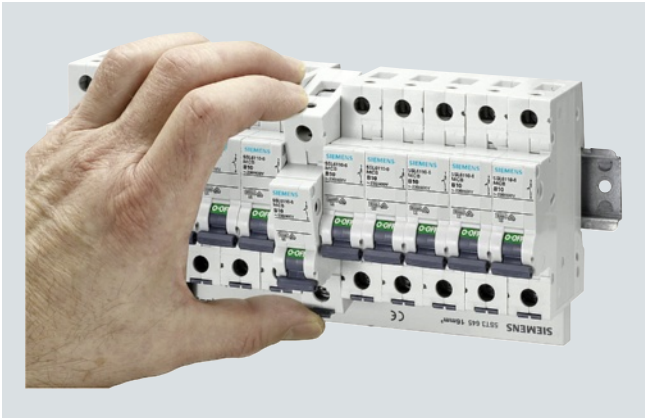
Benefits



- Effective touch protection when grasping and manually operating the latching slide with latch-down option.



- Easy-to-mount busbar assembly
- Consistent busbar concept throughout the Siemens miniature circuit breaker range.



- Individual devices can be removed from the bus-mounted assembly without the use of tools.

- The 5SL miniature circuit breakers are ideal for the quick and easy mounting of auxiliary switches and fault signal contacts.

Rated making and breaking capacity I_{cn}	Acc. to EN 60898-1	kA AC	4.5	6
Insulation coordination				
• Rated insulation voltage • Pollution degree for overvoltage category		V AC	250/440 2/III	
Touch protection	Acc. to EN 50274		Yes	
Handle end position, sealable			Yes	
Degree of protection			IP20, with connected conductors	
CFC and silicone-free			Yes	
Conductor cross-sections				
• Solid and stranded • Finely stranded with end sleeve		mm^2 mm^2	0.75 ... 35 0.75 ... 25	
Terminals	±screw (Pozidriv)		2	
• Terminal tightening torque		Nm	2.5 ... 3	
Mounting position			Any	
Service life, on average, with rated load			20000 actuations	
Storage temperature			-40 ... +75	
Ambient temperature		°C	-25 ... +45, occasionally +55, max. 95 % humidity	
Resistance to climate	Acc. to IEC 60068-2-30		6 cycles	

[1] The operational voltage 60 V DC/pole takes into account a battery charging voltage with a peak value of 72 V.

5SL3, 4 500 A

Overview

The 5SL miniature circuit breakers are particularly suitable for the demands of 4.5 kA and 6 kA applications in the infrastructure, such as residential buildings and small commercial buildings

Introduction

Overview

MCBs are used to protect plants in buildings and for industrial applications. The devices can be used as main control switches for the disconnection or isolation of plants.

Used in industrial applications and plant engineering, miniature circuit breakers can be supplemented with additional components, such as auxiliary switches, fault signal contacts, shunt trips, undervoltage releases, remote controlled mechanism and RC units.

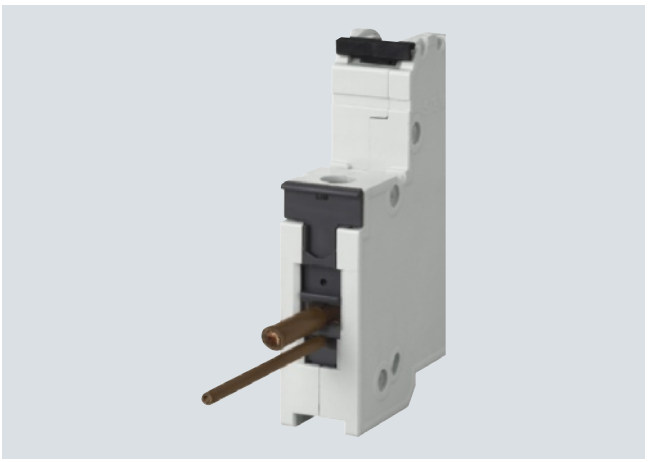
The devices are approved for worldwide use according to IEC standards for systems up to 250/440 V AC. 72 V DC per pole is permitted in DC systems.

For North America, there is an additional approval according to UL 1077 for use as "supplementary protectors" in systems up to 480Y/277 V AC. For use in ship building, the devices also have numerous certifications according to shipping classifications; BV, DNV, GL and LRS. References to this can be found in the appendix, chapter 20.

Benefits

- Optional top or bottom infeed as the terminals are identical
- Clear and visible conductor connection in front of the busbar facilitates controls
- The conductor is easily inserted into the terminal thanks to the large and easily accessible wiring space.

- Quick and easy manual removal of MCBs from the busbar assembly if e. g. connections need to be changed
- Time-saving replacement of parts as busbars no longer need to be freed from adjacent devices.



- Duplicate terminal clamps allow 2 conductors with different cross-sections (cross-section combinations upon request) to be fitted.

- The 5SY miniature circuit breakers are ideal for the quick and easy mounting of auxiliary switches and fault signal contacts. Captive metal brackets on additional components ensure the quick and easy mounting of devices on the miniature circuit breakers without the need for tools.

1) The operational voltage 60 V DC/pole takes into account a battery charging voltage with a peak value of 72 V.

2) For further information see Configuration manual 10/2011 "Miniature circuit breakers" at: www.siemens.com/lowvoltage/manuals.

3) Ensure compliance with the specified polarity when connecting DC.

4) 5SY4... 4-pole, degree of pollution 2 at overvoltage category III.

5) Not characteristic D 0.3 A

6) 5SY4... 4-pole 880 V is not a standardized voltage acc. to EN 60898-1, suitable for max. 1000 V DC, if the four poles are connected in series.

5SY6, 6 000 A

[1] 1 MW (modular width) = 18 mm.

Note:

The 5ST3 600 or 5ST3 630 busbars enable simple wiring of 4-pole miniature circuit breakers, see page 3/42.

For application examples, see engineering manual at: www.siemens.com/lowvoltage/manuals.

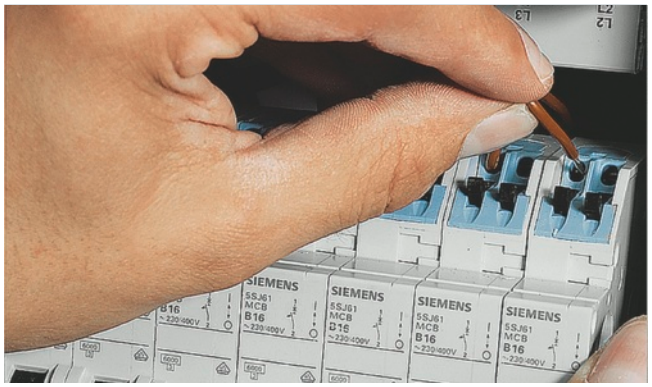
5SJ6 ...-.KS
miniature circuit breakers with plug-in terminals

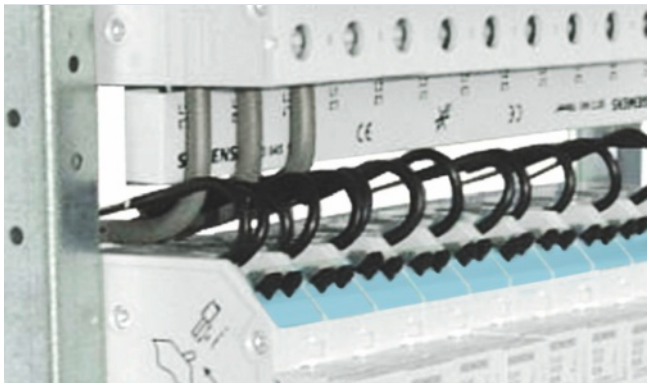
Overview

Miniature circuit breakers with plug-in terminals are used for the protection of socket outlets and lighting circuits with the most common rated currents of 10 to 20 A.

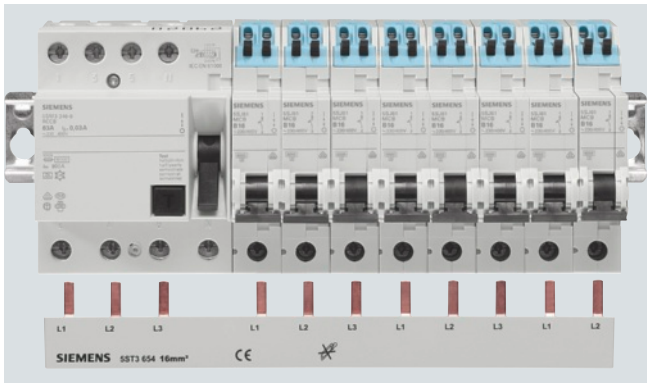
Benefits



- Double, self-contained, screwless outgoing terminals for fast connection of conductors.



- Removal of individual conductors requires no tools and ensures high operating safety
- No end sleeves required for finely stranded conductors. This saves mounting time.



- Conventional pin busbars are used for the incoming terminal. This ensures clear, manageable and convenient access to all terminals as part of the uniform Siemens connection concept.

* You can order this quantity or a multiple thereof.

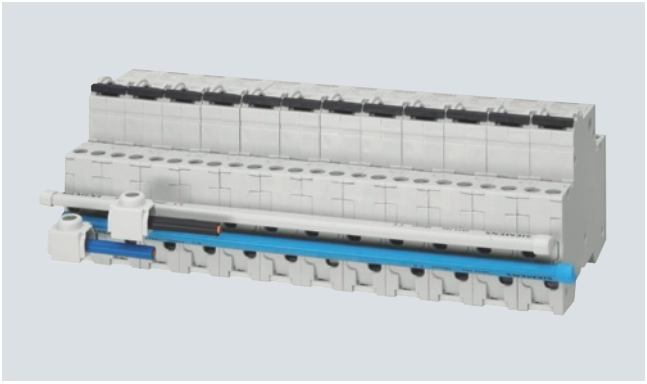
Overview

These miniature circuit breakers are used for the protection of plants with switched neutral conductors in distribution boards with little space. They are just a single modular width.

Compact busbars facilitate installation in space saving distribution boards.

Benefits

- Auxiliary switches and fault signal contacts from the high-capacity range can be freely mounted on these miniature circuit breakers. This increases availability and cuts down on logistics.



- The infeed can be implemented either from the top or the bottom. Additional terminals with lateral cable entry facilitate mounting when using large conductor cross-sections.

Electrical components

Overview

The Siemens mounting concept supports the combination of all 5ST3 additional components with Siemens 5SY and 5SP miniature circuit breakers and with 5SU1 RCBOs.

5SL and 5SY6 0.. miniature circuit breakers are suitable for mounting auxiliary switches and fault signal contacts. Auxiliary switches can also be mounted on 5TE8 flush-mounting circuit breakers and 5SG7 1 MINIZED switch disconnectors.

Auxiliary switches (AS)

The auxiliary switch (AS) always signals the contact position of the miniature circuit breaker, regardless of whether the miniature circuit breaker was tripped manually or as the result of a fault. An additional version is also available for the switching of small currents and voltages for the control of programmable control systems (PLCs) acc. to EN 61131-2. The auxiliary switch with test button enables the testing of control circuits without the need to switch the miniature circuit breaker.

Fault signal contacts (FC)

The fault signal contact (FC) signals the automatic tripping of the miniature circuit breaker in the event of a fault, such as an overload or a short circuit. If the fault signal contact is activated, the contact position does not change if the miniature circuit breaker is tripped manually. Fault signal contacts with TEST and RESET buttons enable the testing of control circuits without the need to trip the miniature circuit breaker. The red RESET button integrated in the handle also indicates the automatic tripping of the MCB. The signal can be acknowledged manually using the RESET button.

Shunt trips (ST)

Shunt trips are used for the remote tripping of miniature circuit breakers.

Undervoltage releases (UR)

Undervoltage releases are integrated (e. g. in EMERGENCY STOP loops), thus ensuring that the MCB trips in the event of an emergency, which, in turn, ensures disconnection of the control circuit according to EN 60204. In the event that the voltage is interrupted or too low, it also trips, i. e. prevents activation of the MCB.

Remote controlled mechanisms (RC)

Remote controlled mechanisms are used for the remote ON/OFF switching of miniature circuit breakers and the remote ON switching of RC units, as well as the local manual switching of these devices. A blocking function permits maintenance work. In the event that a miniature circuit breaker or RC unit is tripped, an acknowledgment must be carried out prior to switching back on. The remote controlled mechanism has an operating mode selector switch with the functions: "Locked", "Manual" and "Remote Switching".

Position of selector switch:
OFF: The remote controlled mechanism is switched off, blocked mechanically and can be sealed and/or locked.
RC OFF: Only manual operation is possible.
RC ON: Both manual and remote operation is possible.

In the event that a device is tripped by a fault (RC units, miniature circuit breakers), the handle of the basic device and remote controlled mechanism switches to the OFF position. The operator must then acknowledge the tripping by resetting the remote controlled mechanism (OFF command) before it can be reactivated. This serves the safety of the plant or to protect personnel during maintenance work.

In an RC unit/miniature circuit breaker combination, the RC unit is switched on asynchronously, i. e. prior to the miniature circuit breaker. The RC units for 5SY and 5SP4 can be switched ON via the MCB handle jumper using the supplied actuator attachment. There is no need to switch off the RC unit via the remote controlled mechanism as the MCB contacts ensure disconnection of the electrical circuit.

The switching frequency is max. 2 actuations per minute. If this actuation frequency is exceeded it may cause an internal tripping of the remote controlled mechanism as a protection against possible overload. In this case, the remote controlled mechanism must be switched OFF at the function selector switch and not switched back on again for at least 5 minutes. Further additional 5ST3 components ... , such as AS, FC, ST and UR, can be added to the right-hand side of the remote controlled mechanism acc. to the Siemens mounting concept.

RC units

RC units can be combined with miniature circuit breakers of characteristic A, B, C and D. They then form a combination of RCCB and MCB for personnel, fire and line protection. The combinations can be tailored to meet individual requirements.

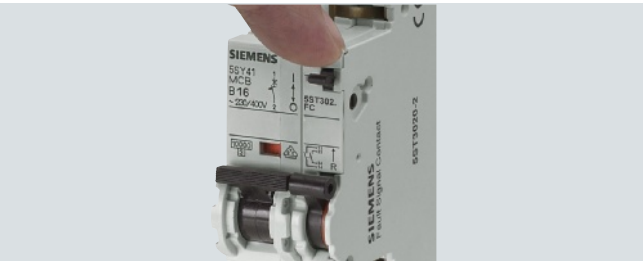
For information on RC units, see chapter "Residual current protective devices".

Benefits

Can be universally retrofitted with all additional components

- The 5SL, 5SY and 5SP miniature circuit breakers are ideal for the quick and easy mounting of auxiliary switches and fault signal contacts.
  Captive metal brackets on additional components ensure the quick and easy mounting of devices on the miniature circuit breakers without the need for tools.

- Fault signal contacts with TEST and RESET button enable the simple testing of auxiliary circuits and, in the event of a fault, acknowledgement of the fault over the RESET button, without the need to switch the miniature circuit breakers.



The auxiliary switches with TEST button enable the simple manual testing of control circuits during operation of the entire plant without the need to switch the miniature circuit breakers.

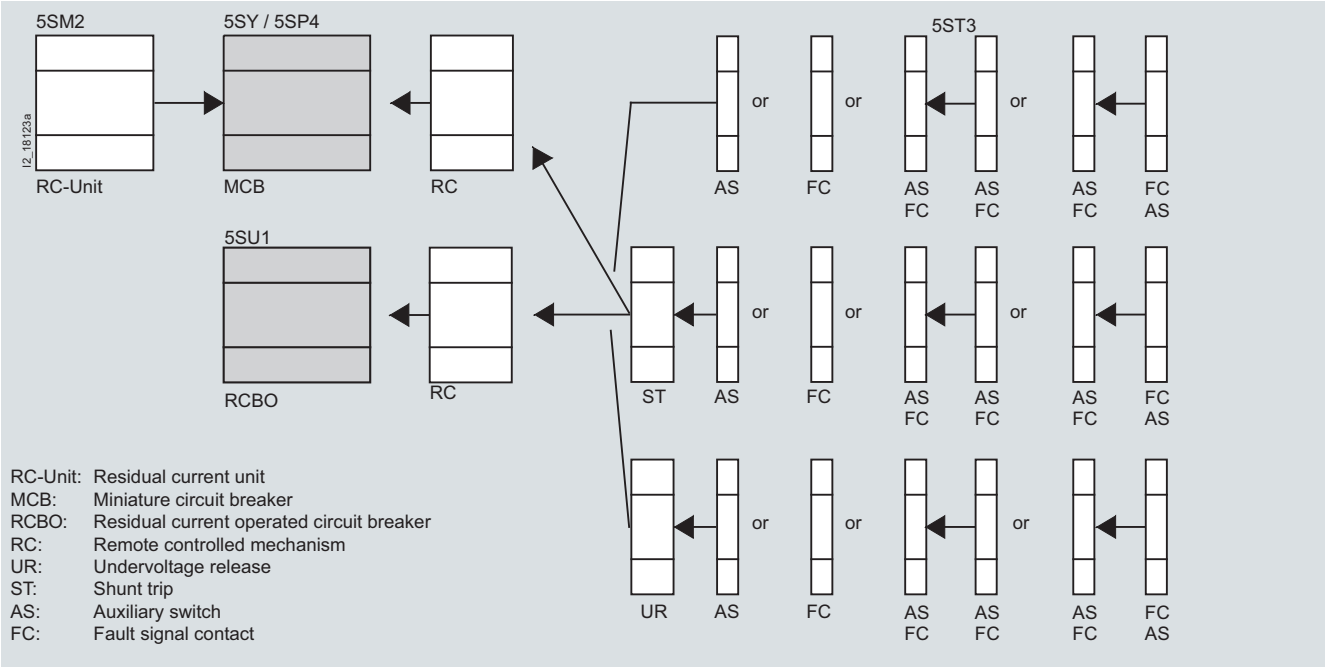
More information

The Siemens mounting concept supports the combination of all 5ST3 additional components with miniature circuit breakers of the 5SY and 5SP series and RCBOs of the 5SU1 series.

5SL and 5SY6 0.. miniature circuit breakers are suitable for mounting auxiliary switches and fault signal contacts. Auxiliary switches can also be mounted on 5TE8 flush-mounting circuit breakers and 5SG7 1 MINIZED switch disconnectors.

The chart shows which additional components can be mounted on either the right or the left.



For further information on the mounting concept for RCBOs, see chapter "Residual Current Protective Devices".

5ST standard busbars

Overview

The busbar system with pin-type connections can be used for all 5SL6 and 5SJ6 miniature circuit breakers . . .-.KS and 5SY miniature circuit breakers with or without mounted auxiliary switch (AS) or fault signal contact (FC).

Busbars in 10 mm^2 and 16 mm^2 versions are available.

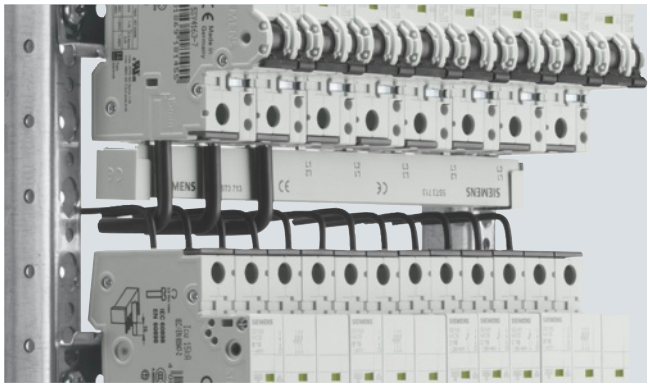
The 5ST3 7 busbar system with bars that can be cut to length can be tailored to any requirements.

The extremely flexible 5ST3 6 busbar system with fixed lengths also enables installation in any length as the busbars can be overlapped.
No further need for time-consuming tasks, such as cutting, cutting to length, deburring, cleaning of cut surfaces and mounting of end caps.

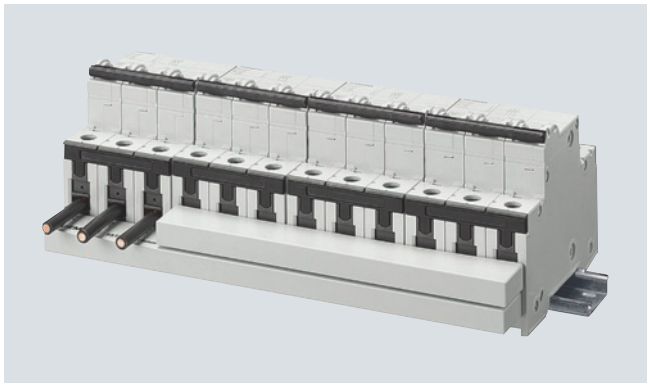
Any free pins on the busbars can be made safe by covering with touch protection.

For further information on busbar miniature circuit breakers with residual current operated circuit breakers, please refer to the chapter "Residual current protective devices".

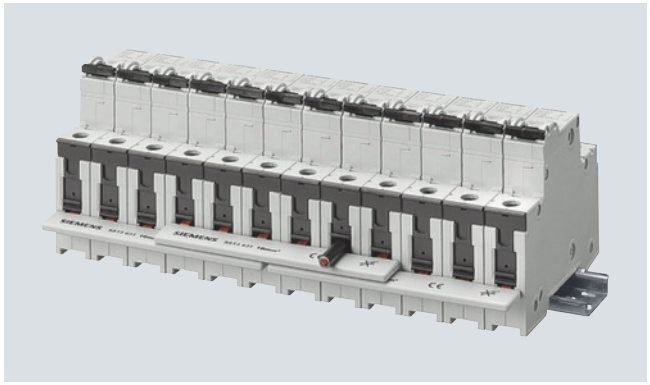
Benefits



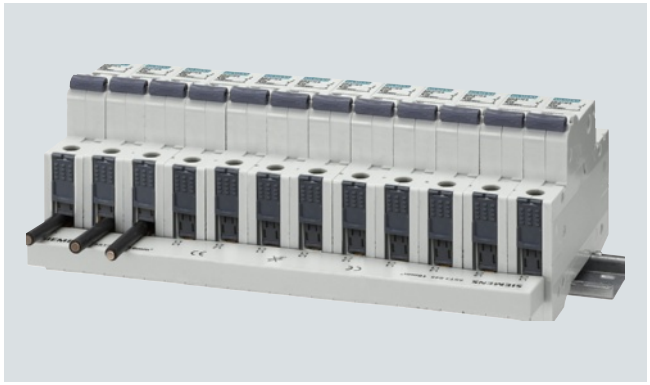
- Between the devices, the busbar, located at the bottom and behind the conductor, provides an optimum wiring space with easy view of the inserted conductor. This enables easy control of connections.



- The ability to overlap the busbar mounting enables a cross-section enlargement of up to 32 mm^2 using the respective components 10 mm^2 and 16 mm^2.



- By overlapping the busbars with fixed lengths, it is possible to achieve device combinations with any number of devices.

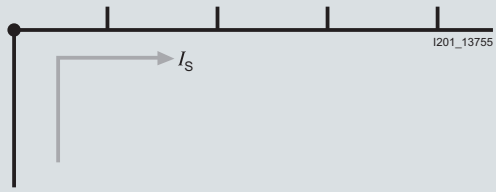


- The fact that the connection of the conductor is always clearly visible facilitates cable entry of all pole types and considerably reduces mounting times.

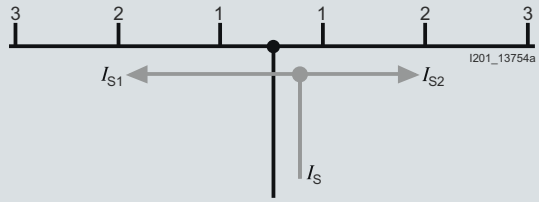
Technical specifications

			5ST3
Standards			EN 60439-1 (VDE 0660-500): 2005-01
Busbar material			SF-Cu F 24
Partition material			Plastic, Cycoloy 3600 heat-resistant over 90 °C flame-retardant and self-extinguishing, dioxin and halogen-free
Rated operational voltage U_c		V AC	400
Rated current I_n			
• Cross-section 10 mm^2		A	63
• Cross-section 16 mm^2		A	80
Rated impulse withstand voltage U_{imp}		kV	4
Test pulse voltage (1.2/50)		kV	6.2
Rated conditional short-circuit current I_{cc}		kA	25
Resistance to climate			
• Constant atmosphere	Acc. to DIN 50015		23/83; 40/92; 55/20
• Humid heat	Acc. to IEC 60068-2-30		28 cycles
Insulation coordination			
• Overvoltage category			III
• Pollution degree			2
Maximum busbar current I_S/phase			
• Infeed at the start of the busbar			
- Cross-section 10 mm^2		A	63
- Cross-section 16 mm^2		A	80
• Infeed at the center of the busbar			
- Cross-section 10 mm^2		A	100
- Cross-section 16 mm^2		A	130

Infeed at the start or end of the busbar



Infeed along the busbar or midpoint infeed



The sum of the output current per branch (1, 2, 3 ... n) must not be greater than the max. busbar current I_S/phase.

5ST3 busbars acc. to UL 508

Overview

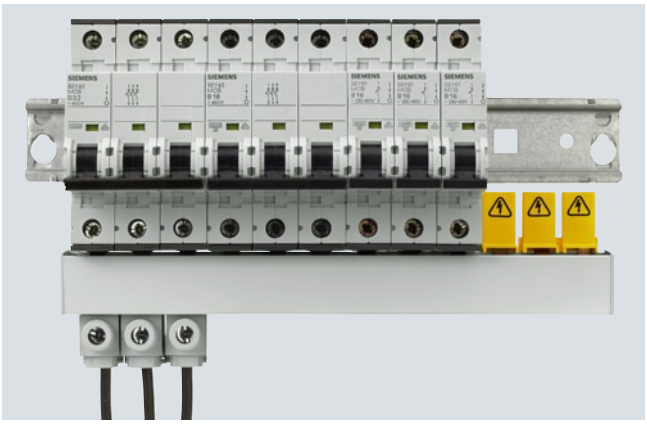
Products according to UL standards are used in North America, but also in several other countries. This is important in particular for exporting machines or electrical switchgear assemblies and equipment to the USA. Acceptance and delivery are possible only if the relevant UL standards are satisfied.

The 5ST3 7 busbar system according to UL 508 and CSA is suitable for both universal use worldwide with all 5SY and 5SP miniature circuit breakers for Supplementary Protection certified according to UL 1077 and for 3NW and 3NC fuse holders certified according to UL 512. Not approved for use in feeder circuits.

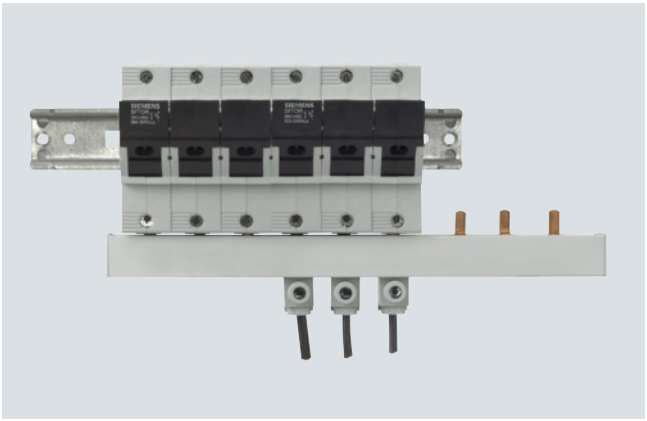
The busbars are available in single-, two- and three-phase version with different pin spacings and with two cross-sections 18 mm² and 25 mm². Infeed can be directly into the terminals of the miniature circuit breaker or through connection terminals.

The connection terminals are available in two versions – for direct infeed at the busbar or for infeed directly at the miniature circuit breaker/fuse holder. Pins that are not required can be covered with touch protection covers.

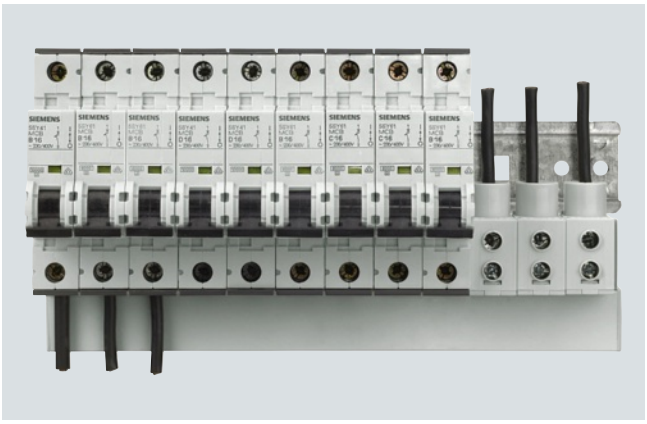
Benefits



- Busbar with infeed through a connection terminal directly on the miniature circuit breaker up to a conductor cross-section of 35 mm²



- Bus mounting with infeed at the fuse holder for conductor cross-sections up to 35 mm²



- Infeed directly on the miniature circuit breaker up to a cross-section of 35 mm² and connection terminal for connection directly on the busbar up to a conductor cross-section of 50 mm²
- Suitable for universal use according to both IEC and UL standards
- Can be used for 5SY, 5SP miniature circuit breakers and for Class CC, cylindrical and SITOR fuse holders
- UL-tested combination – device and busbar
- Different cross-sections 18 mm² and 25 mm².

Overview

Distribution blocks for standard rail mounting

Using distribution blocks it is possible to implement one, two, three and four-phase systems with a rated current of up to 400 A. This allows supply terminals to be divided into several load circuits with different cable cross-sections.

The distribution blocks are made of thermoplastic with electrical and mechanical components, which enables their use under high thermal and mechanical load acc. to IEC 60947-7-1.

SIKclip wiring system

Overview

SIKclip is a fast wiring system that simplifies the connection of flush-mounting circuit breakers:

- For mounting directly on the rear vertical CU busbar system
- Mounting using brackets on the rear of the DIN-rail

The 4-pole busbar can handle loads of up to 250 A, each individual contact up to 63 A.

High degree of protection because each contact is locked individually.

SIKclip is made of thermoplastic acc. to IEC 60439-3 and is suitable for high thermal loads.

Technical specifications

		5SK9 011-1KK2., 5SK9 011-2KK2.
Compliance to standards		EN 60947-1, EN 60439-3
Degree of protection		IP20
Max. rated current I_n	A	250 at 40 °C ambient temperature
Max. rated output current I_n	A	63 at 40 °C ambient temperature
Rated operational voltage U_n	V AC	400
Rated insulation voltage	V AC	660
Test voltage	kV	2.5, 50 Hz
Connecting cables		40 A (6 mm^2), 63 A (10 mm^2)
Connecting cable type		H07VK
Ambient temperature	°C	-5 ... +60

5SJ4 . . . - . HG miniature circuit breakers acc. to UL 489 and IEC, and accessories

Overview

UL standards are used in North America as well as in several other countries. This is of particular importance to European exporters of electrical switchgear assemblies and equipment for machines who export to the USA, as their products will only be accepted if they meet the relevant UL standards.

A wide range of low-voltage circuit protection devices from Siemens comply with UL standards and are therefore suitable for implementation worldwide in both IEC/EN and UL applications within the framework of their specified use.

Miniature circuit breakers certified to UL 489 permit use as an all-round solution for protection tasks in distribution boards, control cabinets and control systems to UL 508A as "branch protectors". In particular, they are also approved for the protection of electrical circuits in heating, ventilating and cooling systems (HVAC), as well as for DC applications up to 60 V/125 V.

This covers a wide range of protection tasks, in residential and non-residential buildings, as well as in industry. The tripping characteristics B, C and D to EN/IEC 60898-1 have been adapted so that they fall in the permissible tripping range according to UL 489, as well as for applications at 25 °C and 40 °C.

This means that the devices are approved for use according to both standards. The enclosure dimensions of the devices correspond to DIN format. This means that the device series are suitable for universal use worldwide according to IEC or UL standards.

The key difference between the three device series is their application in different power supply systems.

- 5SJ4 …-.HG40: 240/120 V AC, 1-pole, "same polarity only",
- 5SJ4 …-.HG41: 240 V AC, 1-, 2- and 3-pole,
- 5SJ4 …-.HG42: 480Y/277 V AC, 1-, 2- and 3-pole.

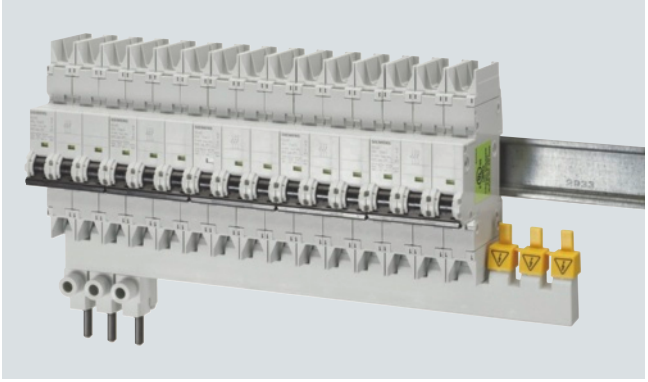
The terminals are suitable for "field wiring". This means that the devices can be installed not only in factory-finished distribution boards and control cabinets, but also on-site in a customer system.

Using this mounting concept, all additional 5ST3 . . .-.HG components can be combined with miniature circuit breakers of the 5SJ4 …-.HG range. The auxiliary switch (AS) signals the contact position. In the event of a fault, the fault signal contact (FC) signals the automatic tripping of the MCB as well as the contact position. Shunt trips (ST) are used for the remote tripping of miniature circuit breakers. Captive metal brackets on the additional components ensure fast mounting on the devices.

Single, two and three-phase busbars in 3 lengths with 6, 12 or 18 pins are available as accessories for all device series for "field wiring". The infeed is via connection terminals, which are available in two versions, for direct infeed at either the busbar or the miniature circuit breakers. Pins that are not required can be covered with touch protection covers.

Benefits

- Can be used globally for all applications in residential, non-residential and industrial buildings. This facilitates the planning of plants and enhances export opportunities
- The devices can be used according to IEC/EN 60898-1 and UL 489, which means these devices can be installed anywhere in the world
- Miniature circuit breakers with 480Y/277 V up to 40 A, with 240/120 V and 240 V up to 63 A
- Can be used for both AC voltage and DC voltage up to 125 V
- Rated making and breaking capacity up to 14 kA in acc. with UL 489 and up to 15 kA in acc. with IEC 60947-2
- Fast mounting with busbars up to 115 A and feeder terminals up to 50 mm^2.



- Infeed direct at miniature circuit breaker for conductor cross-sections up to 35 mm^2

- Bus mounting with central infeed directly on the busbar up to conductor cross-section of 50 mm^2

- Accessories: Auxiliary switches, fault signal contacts and shunt trips up to 480 V can be easily mounted onto the miniature circuit breaker.

AS: Auxiliary switch
FC: Fault signal contact

SHU 5SP3 main miniature circuit breakers

Overview

Selective main miniature circuit breakers are used as circuit breakers at meter panels and provide an optimum solution.

Characteristic E is adapted to the special application requirements for cascade circuits between melting fuses and miniature circuit breakers in distributor circuits.

An integrated adapter enables quick and easy mounting of the devices on 40-mm busbars. The reduced width of 1.5 MW creates lots of additional space in the meter cabinet.
The screwless outgoing terminal provides optimum user-friendliness.

Used in conjunction with the downstream miniature circuit breaker, selective main miniature circuit breakers ensure effective protection and optimum availability of the system.

Benefits

- Quick and easy installation due to direct busbar
- Space saving field installation due to reduced mounting width
- Tool-free connection of meter cable
- Reliable and high selectivity
- Optimum availability of customer system
- Voltage-independent operation of selective main miniature circuit breakers
- Practical locking options
- Excellent current limitation characteristics increase plant protection, thanks to the selective main miniature circuit breakers supporting downstream miniature circuit breakers.
- High and safe selectivity between sub-distribution and meter panel ensures the continued supply of the unaffected circuits in the event of a fault, thus improving plant availability
- The selective main miniature circuit breaker prevents the affected circuit from being reconnected until the fault is eliminated. Greater safety during operation
- No previous knowledge required for operation of the selective main miniature circuit breakers. This ensures fast and safe disconnection and reconnection of loads.
- Complies with all the requirements of TAB 2007.

Overview

Circuit breaker terminals are used for short-circuit protection or for protection against overloading and short-circuiting in auxiliary and control circuits after control transformers. All terminals are designed for 2 wires. The terminal block labeling accessories are used for inscription.

Benefits

- Integration of line protection switching function in the terminal connection of control cabinets in compact 12 mm design
- Display of switching position or the "Tripped" state for the fast detection of faults
- Switching/isolating function facilitates fault locating
- Device versions with integrated auxiliary switch (AS) signal the contact position
- Device versions with floating through-type connection parallel to the switching contacts facilitate line connection

These devices are listed as "Supplementary Protectors" according to UL 1077 (UL Recognized Components) and CSA 235 (CSA Component Accepted).

SIGRES

SIGRES RCCBs were developed for use in harsh ambient conditions, such as swimming baths as protection against chlorine and ozone, in the agricultural sector (ammonia), on building sites and in the chemical industry (nitrogen oxide, sulfur dioxide, solvents), in the food processing industry (hydrogen sulfide) and in unheated rooms (dampness). The patented active condensation protection requires a continuous power supply and bottom infeed if the RCCB is switched off.

When used in ambient conditions in accordance with product standard EN 61008-1, the operation interval for pressing the test button can be extended to 1x a year.

Super resistant K

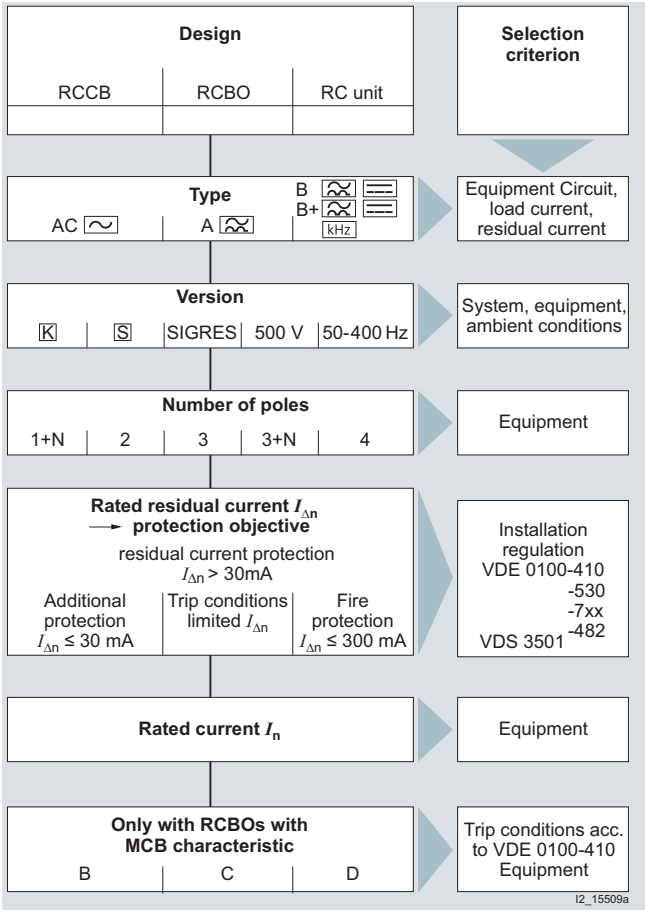
Super resistant (short-time delayed) RCCBs meet the maximum permissible break times for instantaneous devices. However, by implementing a short-time delay they prevent unnecessary trippings, and thus plant faults, when pulse-shaped leakage currents occur - as is the case when capacitors are switched on.

Selective S

Can be used as upstream group switch for selective tripping contrary to a downstream, instantaneous or super resistant RCCB.

Note:

You will find further information on the subject of residual current protective devices in the technology primer "Residual Current Protective Devices", Order No.: E10003-E38-9T-B3011 and in the Technology Manual at: www.siemens.com/lowvoltage/manuals



Selection aid for finding the suitable residual current protective device

5SM3 RCCBs

Overview

RCCBs of type A are used in all systems up to 240/415 V AC. They trip in the event of both sinusoidal AC residual currents and pulsating DC residual currents.

RCCBs with a rated residual current of maximum 30 mA are used for personnel, material and fire protection, as well as for protection against direct contact. RCCBs with a rated residual current of 10 mA are primarily used in areas that represent an increased risk for personnel.

Since the introduction of DIN VDE 0100-410, all socket outlet current circuits up to 20 A must also be fitted with residual current protective devices with a rated residual current of max. 30 mA. This also applies to outdoor electrical circuits up to 32 A for the connection of portable equipment.

Devices with a rated residual current of maximum 300 mA are used as preventative fire protection in case of insulation faults. RCCBs with a rated residual current of 100 mA are primarily used inside Europe.

Benefits

- Instantaneous RCCBs with the N connection on the left-hand side enable simple bus mounting with standard pin busbars with miniature circuit breakers installed on the right-hand side
- Instantaneous RCCBs with the N connection on the right-hand side can be bus-mounted with miniature circuit breakers using a special pin busbar
- Instantaneous devices have a surge current withstand capability with current waveform 8/20 µs of over 1 kA, super resistant of over 3 kA and selective of over 5 kA. This ensures safe operation
- SIGRES has an extremely long service life due to patented active condensation protection and the same dimensions for the quick and easy replacement of instantaneous RCCBs already installed
- Super resistant devices increase plant availability, as un necessary tripping is prevented in systems with short-time glitches
- Selective RCCBs increase plant availability, as in the event of a fault, a staggered tripping time enables the selective tripping of RCCBs connected in series
- Auxiliary switches or remote controlled mechanisms are also available as additional components
- The operating handle and the test button can be locked by means of a handle locking device.

Technical specifications

			Instantaneous	SIGRES	Super resistant	Selective
Standards			IEC/EN 61008-1 (VDE 0664-10), IEC/EN 61008-2-1 (VDE 0664-11); IEC/EN 61543 (VDE 0664-30)

SIQUENCE, 5SM3 and 5SU1 universal current-sensitive RCCBs, type B and type B+

Overview

Frequency converters, medical devices and UPS systems are seeing increasing use in industry. Smooth DC residual currents or currents with low residual ripple may occur in the event of faults on these devices.

Type A residual current protective devices are unable to detect these smooth DC residual currents. Furthermore, such smooth DC residual currents make type A devices increasingly insensitive to AC residual currents and pulsating DC residual currents. If a fault occurs, there is therefore no tripping and the desired protective function is no longer assured.

UC-sensitive residual current protective devices of types B and B+ have an additional transformer which is supplied with a control signal. This enables an evaluation of the change of the transformer's operating range caused by smooth DC residual currents, thus ensuring the desired protective function.

The residual current protective devices of type B are suitable for use in three-phase current systems before input circuits with rectifiers. They are not intended for use in DC systems and in networks with operating frequencies other than 50 Hz or 60 Hz.

The devices in this series are designed as residual current operated circuit breakers (RCCBs) up to 80 A and as residual current circuit breakers with integral overcurrent protection (RCBOs) for 100 A or 125 A in Characteristics C or D.

Type B+ residual current protective devices also offer enhanced, preventative fire protection. In these versions, the tripping value is limited to a maximum of 420 mA up to 20 kHz.

Benefits

- Universal current-sensitive residual current protective devices detect not only AC residual currents and pulsating DC residual currents, but also smooth DC residual currents, thus ensuring the desired protective function with all types of residual current.
- With type B, the tripping characteristic is adapted to the increase of leakage currents at higher frequencies in systems with capacitive impedances and results in increased operating safety
- Type B+ versions offer enhanced preventative fire protection and correspond to the prestandards DIN V VDE V 0664-110 and/or DIN V VDE V 0664-210 and VdS Directive 3501
- The RCBO is a compact device for up to 125 A. It provides not only personnel, property and fire protection but also overload and short-circuit protection for cables. Wiring and mounting outlay is reduced as a result
- The RCBOs offer external remote tripping over terminals Y1/Y2. This supports implementation of central OFF circuits.

Additional components

Overview

Auxiliary switches (AS) signal the contact position of the RCCB.

Remote controlled mechanisms are used for the remote ON/OFF switching of RCCBs. They also enable local manual switching. A blocking function permits maintenance work. A tripped RCCB must be acknowledged prior to switching back on.

The leakage current measurement device detects the leakage currents - like the circuit breaker - thus providing a direct statement as to the current loading of the RCCB. It is used to measure leakage currents up to 300 mA. This requires a voltmeter with an internal resistance over 1 MΩ/V and a measuring range for AC voltages of U_{eff} = 1 mV to 2 V. For the fault-free operation of an RCCB, the measured leakage current should be no greater than 1/3 of the rated residual current.

Benefits

- Using captive brackets, the remote controlled mechanism can be attached (or retroffitted) to the right-hand side of the basic device without the need for tools
- Bus systems, such as *instabus* KNX, AS-Interface bus or PROFIBUS, can be integrated in the communication over binary inputs
- The leakage current measurement device enables the systematic selection of the rated residual current, thus preventing the inadvertent tripping of RCCBs.

5SM2 RC units

Overview

RC units of type A can be used in all systems up to 240/415 V AC. They trip in the event of both sinusoidal AC residual currents and pulsating residual currents.

RCCBs with a rated residual current of maximum 30 mA are used for personnel, material and fire protection, as well as for protection against direct contact.

Devices with a rated residual current of maximum 300 mA are used as preventative fire protection in case of insulation faults.

RC units are combined with miniature circuit breakers with characteristics A, B, C and D, provided that these are available in the MCB range. The two components are simply plugged together without the need for any tools.

They then form a combination of RCCB and MCB for personnel, fire and line protection.

The dimensioning of the rated residual current depends on the size of the plant.

Benefits

- Our wide variety of RC unit types and comprehensive range of miniature circuit breakers offer a huge spectrum of combinations for all applications
- All devices have surge current withstand capability of more than 1 kA, thus ensuring safe and reliable operation
- All additional components for miniature circuit breakers can be retrofitted on the right-hand side
- All 100 A and 125 A RC units offer external remote tripping over terminals Y1/Y2. This supports implementation of central OFF circuits.
- Both components can be simply plugged into each other and secured with captive metal brackets - no tools required. This saves considerable time when mounting.

5SU1 RCBOs

Overview

RCBOs are a combination of a RCCB and a miniature circuit breaker in a compact design for personnel, fire and line protection. For personnel and fire protection, the residual current part of the type A trips in the event of sinusoidal AC residual currents and pulsating DC residual currents.

RCBOs with a rated residual current of maximum 30 mA are used for personnel, material and fire protection, as well as for protection against direct contact. RCBOs with a rated residual current of 10 mA are primarily used in areas that represent an increased risk for personnel and the outdoor installations of residential buildings.

Devices with a rated residual current of maximum 300 mA are used as preventative fire protection in case of insulation faults.

The MCB part of the RCBO protects lines against overload and short circuits and is available in characteristics B and C.

Since DIN VDE 0100-410 came into effect in June 2007, all socket outlet current circuits up to 20 A must now also be fitted with residual current protective devices with a rated residual current of max. 30 mA. This also applies to outdoor electrical circuits up to 32 A for the connection of portable equipment.

In order to implement this protection, we recommend the national use of RCBOs with 30 mA.

Assignment to each individual branch circuit helps preventing the unwanted tripping of fault-free circuits induced by the accumulation of operation-related leakage currents or by transient current pulses during switching operations.

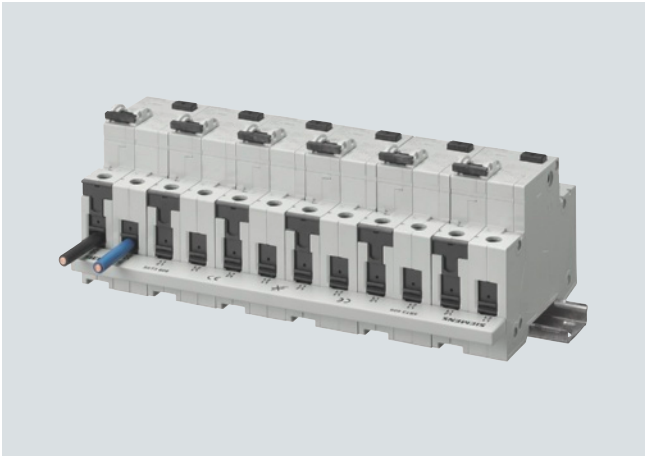
Additional components of the 5SY miniature circuit breakers can be mounted at the side and carry out additional functions.

For further details on additional components, please refer to the chapter "Miniature circuit breakers".

RCBOs comprise one part for fault-current detection and one part for overcurrent detection. They are equipped with a delayed overload/time-dependent thermal release (thermal bimetal) for low overcurrents and with an instantaneous electromagnetic release for higher overload and short-circuit currents.

The special contact materials used guarantee a long service life and offer a high degree of protection against contact welding.

Benefits



For all versions

- Clear and visible conductor connection in front of the busbar facilitates controls
- Large and easily accessible wiring space enables easy insertion of conductor in the terminals
- The surge current withstand capability of over 1 kA ensures safe and reliable operation
- All additional components for miniature circuit breakers can be retrofitted on the right-hand side.

For all 10 kA versions up to 40 A

- Integrated movable terminal covers located at the cable entries ensure that the terminals are fully insulated when the screws are tightened. The effective touch protection when grasping the device considerably exceeds the requirements of BGV A3.
- The RCBOs can be quickly and easily removed from the assembly by hand if connections need to be changed. This saves time if parts need to be replaced because the busbars no longer need to be freed from the adjacent miniature circuit breakers.

For all 125 A versions

- The RCBOs offer external remote tripping over terminals Y1/Y2. This supports implementation of central OFF circuits.

Technical specifications

			Up to 40 A	125 A
Standards			IEC/EN 61009-1 (VDE 0664-20), IEC/EN 61009-2-1 (VDE 0664-21) IEC/EN 61543; VDE 0664-30	
Approvals			IEC 61009-1, IEC 61009-2-1; EN 61009-1, EN 61009-2-1	
Rated voltages U_n		V AC	125 ... 230	400

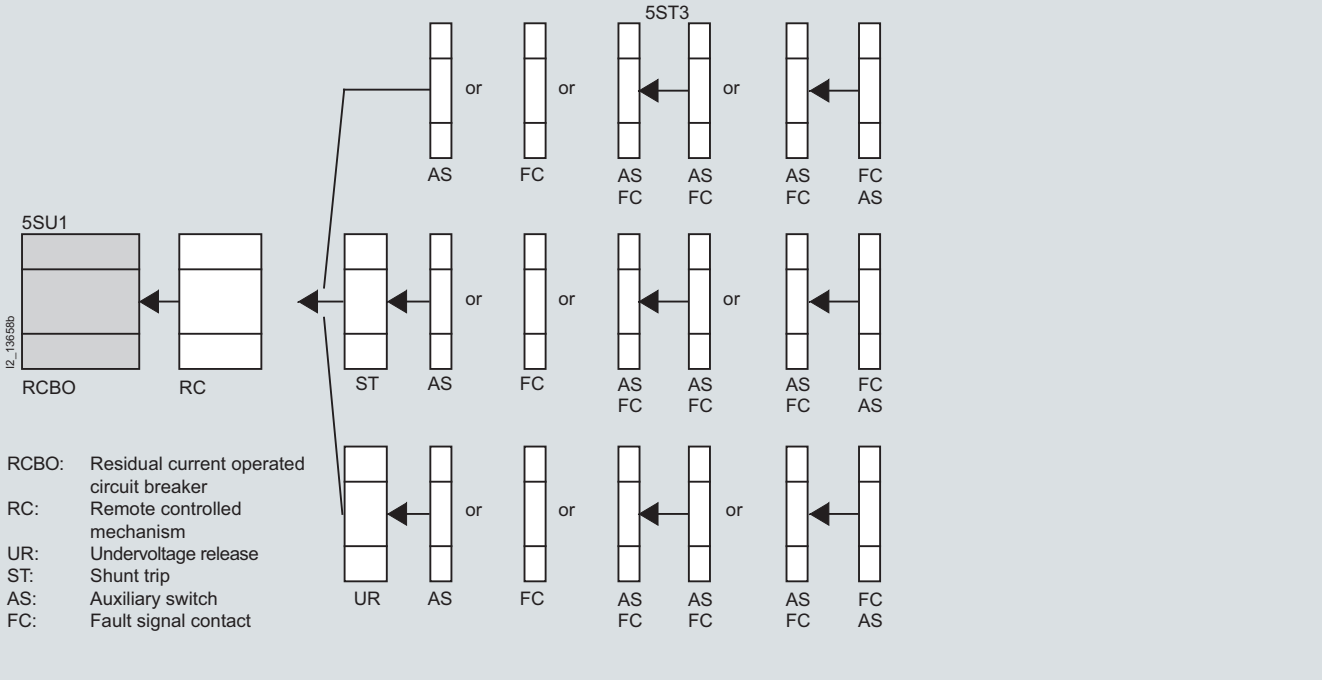
	**Handle couplers for additional components** For mounting additional components auxiliary switches, fault signal contacts, shunt trips and undervoltage releases onto 5SU1 RCBOs, you require a handle coupler (1 set = 5 units).	►	**5ST3 805-1**		1	1 set	027	0.006
	**Locking devices** For RCBOs, sealable and lockable	B	**5ST3 801-1**		1	1 unit	027	0.013

Note:

The same additional components are used for RCBOs as for miniature circuit breakers. See chapter "Miniature Circuit Breakers".



* You can order this quantity or a multiple thereof.

Overview

4-pole 5SM3 RCCBs are bus-mounted either together or in combination with miniature circuit breakers. RCCBs with a N wire connection on the left-hand side facilitate installation because standard busbars are used, as those used for bus mounting miniature circuit breakers.

Busbars in 10 mm^2 and 16 mm^2 versions are available.

The extremely flexible 5ST3 6 busbar system with fixed lengths enables installation in any length as the busbars can be overlapped.

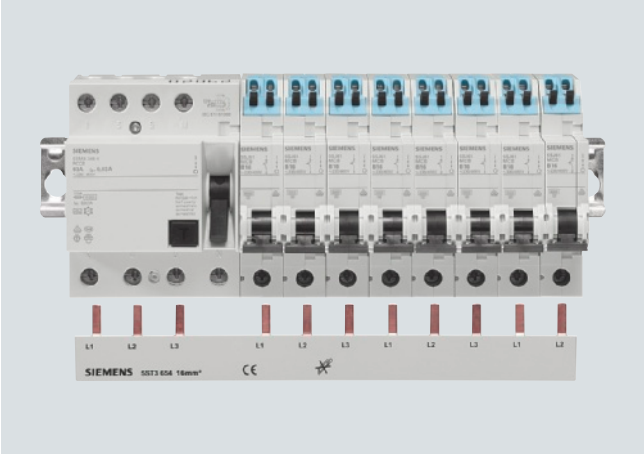
No further need for time-consuming tasks, such as cutting, cutting to length, deburring, cleaning of cut surfaces and mounting of end caps.

Any free pins on the busbars can be made safe by covering with touch protection.

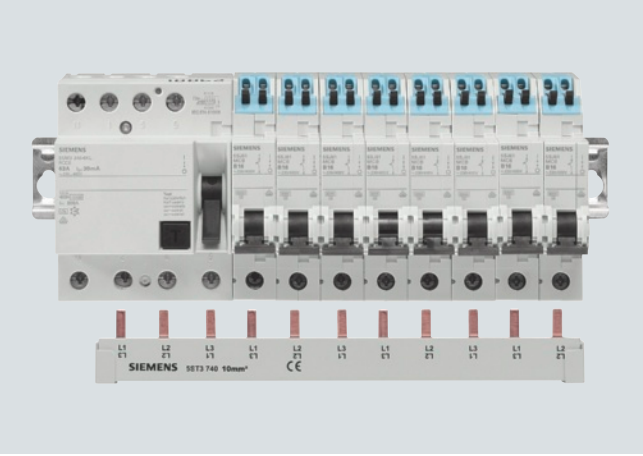
If several RCBOs are bus-mounted together, this is implemented with two-phase busbars, which are used as 1+N busbars.

Benefits

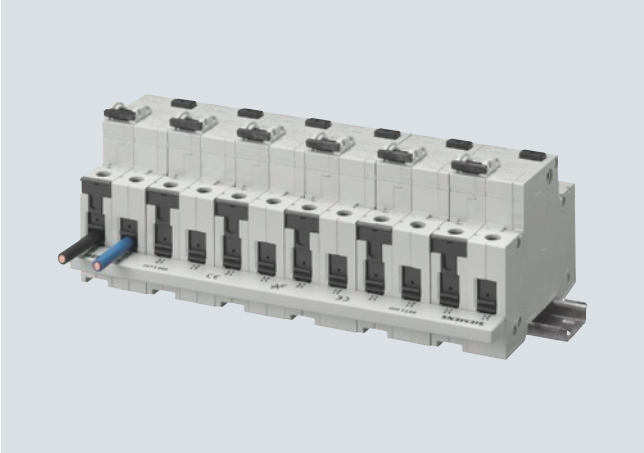
- Connection of miniature circuit breakers to 4-pole RCCBs with N connection right and three-phase busbar, using busbar specially designed for this application. No cutting or end caps required.



- Connection of miniature circuit breakers to 4-pole RCCBs with N connection left, with three-phase busbar that can be cut. No additional items to be stored and busbars that are always available.



- Connection of 1P+N RCBOs with two-phase busbar. No cutting or end caps required.



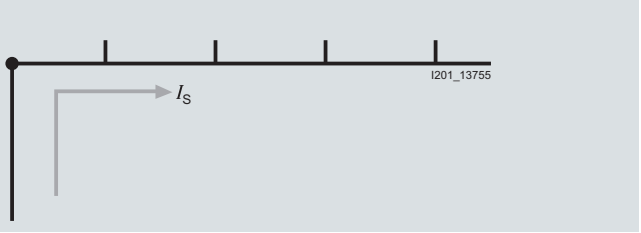
- Bus mounting of RCCBs on busbar (3-phase +N) that can be cut. A proven and frequently used application.

Busbars

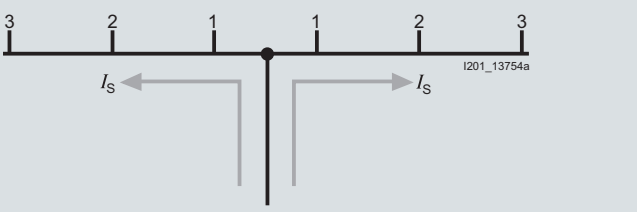
Technical specifications

			5ST3, 5ST2
Standards			EN 60439-1 (VDE 0660-500): 2005-01
Busbar material			SF-Cu F 24
Partition material			Plastic, Cycoloy 3600 Heat-resistant over 90 °C Flame-retardant and self-extinguishing, dioxin and halogen-free
Rated operational voltage U_e		V AC	400
Rated current I_n			
• Cross-section 10 mm²		A	63
• Cross-section 16 mm²		A	80
Rated impulse withstand voltage U_{imp}		kV	4
Test pulse voltage (1.2/50)		kV	6.2
Rated conditional short-circuit current I_{cc}		kA	25
Resistance to climate			
• Constant atmosphere	Acc. to DIN 50015		23/83; 40/92; 55/20
• Humid heat	Acc. to IEC 68-2-30		28 cycles
Insulation coordination	Acc. to IEC 664 (VDE 0110-1)		
• Overvoltage category			III
• Pollution degree			2
Maximum busbar current I_S/phase			
• Infeed at the start of the busbar			
- Cross-section 10 mm²		A	63
- Cross-section 16 mm²		A	80
• Infeed at the center of the busbar			
- Cross-section 10 mm²		A	100
- Cross-section 16 mm²		A	130

Infeed at the start or end of the busbar



Infeed along the busbar or midpoint infeed



The sum of the output current per branch (1, 2, 3 ... n) must not be greater than the max. busbar current I_S/phase.

• Molded-plastic enclosures, equipped with RCCB and SCHUKO® socket outlet	2	16	10	✓

⏦ = type A for AC and pulsating DC residual currents.

Application

RCCB protective socket outlets

- Molded-plastic enclosure equipped with RCCB and flush-type SCHUKO® socket outlet or flush-type SCHUKO® double socket outlet
- For electric devices where there is a risk of accidental contact with live parts in the event of damage
- Rated voltage: 230 V AC, 50 Hz to 60 Hz
- For outdoor connection of gardening equipment and socket outlets in workshops or for agricultural purposes
- Degree of protection IP21 (5SM1 920-.), Degree of protection IP54 (5SZ9 2.6).

					Non-resid. buildings	Residential buildings	Industry
LV HRC fuse systems							
	**LV HRC fuse links**	5/33	Fuse links from 2 A to 1250 A for selective line protection and plant protection in non-residential buildings, industry and power supply companies.	IEC 60269-1, -2; EN 60269-1; DIN VDE 0636-2	✓	✓	✓
	**LV HRC signal detectors**	5/42	Signal detectors for when a fuse is tripped on all LV HRC fuse links with combination or front indicators with non-insulated grip lugs. Plus the comprehensive accessory range required for LV HRC fuse systems.	--	✓	✓	✓
	**LV HRC sockets and accessories**	5/44	Fuse bases for screw or snap-on mounting onto standard mounting rails, available as 1-pole or 3-pole version	IEC 60269-1, -2; EN 60269-1; DIN VDE 0636-2	✓	✓	✓
SITOR semiconductor fuses							
	**SITOR LV HRC design**	5/50	Fuse links in LV HRC design and a huge variety of models support a wide range of applications from 500 V to 1500 V and 150 A to 1600 A. Fuses with slotted blade contacts, bolt-on links or female thread and special designs.	--	--	--	✓
	**SITOR, cylindrical fuse design**	5/58	Fuse links, fuse holders – usable as fuse switch disconnectors and fuse bases up to 600/690 V AC and 400/700 V DC from 1 A to 100 A in the sizes 10 mm × 38 mm, 14 mm × 51 mm and 22 mm × 58 mm.	--	--	--	✓
	**NEOZED and DIAZED, SILIZED design**	5/61	NEOZED fuse links for 400 V AC and 250 V DC and DIAZED for 500 V AC and 500 V DC.	--	--	--	✓
Photovoltaic fuses							
	**Cylindrical fuse design**	5/64	Fuses with a rated voltage of 1000 V DC and gPV operational class for the protection of photovoltaic modules, their connecting cables and other components.	IEC 60269-6	✓	✓	✓
	**PV cumulative fuses**	5/65	Fuses with a rated voltage of 1000 V DC, a rated current of 63 A to 400 A and gPV operational class for the protection of connecting cables and other components.	IEC 60269-6	3	3	✓

Introduction

Overview

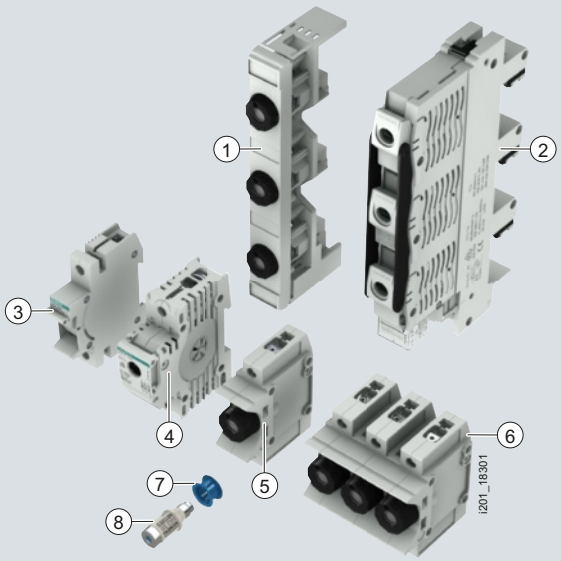
The NEOZED fuse system is primarily used in distribution technology and industrial switchgear assemblies. The system is easy to use and is also approved for domestic installation.

The MINIZED switch disconnectors are primarily used in switchgear assemblies and control engineering. They are approved for switching loads as well as for safe switching in the event of short circuits. The MINIZED D02 is also suitable for use in the pre-counter sector in household applications in compliance with the recommendations of the VDEW according to TAB 2007.

Due to its small footprint, the MINIZED D01 fuse switch disconnector is primarily used in control engineering.

The NEOZED fuse bases are the most cost-effective solution for the application of NEOZED fuses. All NEOZED bases must be fed from the bottom to ensure that the threaded ring is insulated during removal of the fuse link. The terminals of the NEOZED bases are available in different versions and designs to support the various installation methods.

Benefits



1. NEOZED bus-mounting base D02 for 60 mm busbar system, with NEOZED screw cap
2. NEOZED bus-mounting switch disconnector D02 for 60mm busbar system
3. MINIZED fuse switch disconnector D01
4. MINIZED switch disconnector D02
5. NEOZED comfort base, 1-pole (fuse base with touch protection BGV A3), with NEOZED screw cap
6. NEOZED comfort base, 3-pole (fuse base with touch protection BGV A3), with NEOZED screw cap
7. NEOZED adapter sleeve
8. NEOZED fuse link

Compared to the older DIAZED fuse system, the NEOZED fuse system is significantly more modern:

- Much more compact which saves space in the distribution board.
- Modern devices like the MINIZED switching devices, which combine the functions of a switch disconnector and a fuse base.
- Wide range of accessories, such as busbars for one, two, or three-phase wiring.
- Modern terminals for MINIZED D02 and NEOZED comfort bases: Visible, clear and controllable connection simplifies cable entry.

Double terminal chambers permit the connection of two wires of different cross-sections.

- Lower power loss of the fuse links.

Even when compared to the internationally prevalent cylindrical fuse system, the NEOZED fuse system has considerable advantages:

- Non-interchangeability - thanks to use of adapter sleeves (i. e. it is not possible to insert a fuse for larger currents). This is a requirement of numerous wiring regulations in Germany and other European countries.
- Switching devices with load switching characteristics allow the safe switching of load currents up to 63 A.

Technical specifications

DIAZED fuse systems

Overview

The DIAZED fuse system is one of the oldest fuse systems in the world. It was developed by Siemens as far back as 1906. It is still the standard fuse system in many countries to this day. It is particularly widely used in the harsh environments of industrial applications.

The series is available with rated voltages from 500 V to 750 V.

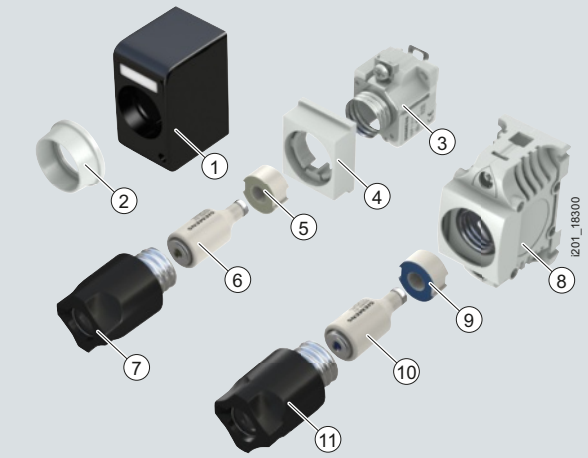
All DIAZED bases must be fed from the bottom to ensure an insulated threaded ring when the fuse link is being removed. Reliable contact of the fuse links is only ensured when used together with DIAZED screw adapters.

The terminals of the DIAZED bases are available in different versions and designs to support the various installation methods.

The high-performing EZR bus-mounting system for screw fixing is an outstanding feature. The busbars, which are particularly suited for bus-mounting bases, have a load capacity of up to 150 A with lateral infeed.

DIAZED stands for **Dia**metral gestuftes **z**weiteiliges Sicherungssystem mit **Ed**isongewinde (diametral two-step fuse system with Edison screw).

Benefits



1 DIAZED cap for fuse bases
2 DIAZED collar for fuse bases
3 DIAZED fuse bases
4 DIAZED cover for fuse bases
5 9 DIAZED screw adapter
6 10 DIAZED fuse link
7 11 DIAZED screw cap
8 DIAZED fuse base (with touch protection BGV A3)

Technical specifications

			5SA, 5SB, 5SC, 5SD
Standards			IEC 60269-3; DIN VDE 0635; DIN VDE 0636-3; CEE 16
Operational class	Acc. to IEC 60269; DIN VDE 0636		gG
Characteristic	Acc. to DIN VDE 0635		Slow and quick
Rated voltage U_n		V AC V DC	500, 690, 750 500, 600, 750
Rated current I_n		A	2 ... 100
Rated breaking capacity		kA AC kA DC	50, 40 at E16 8, 1.6 at E16
Mounting position			Any, but preferably vertical
Non-interchangeability			Using screw adapter or adapter sleeves
Degree of protection	Acc. to IEC 60529		IP20, with connected conductors
Resistance to climate		°C	Up to 45, at 95 % rel. humidity
Ambient temperature		°C	-5 ... +40, humidity 90 % at 20

Cylindrical fuse links and cylindrical fuse holders

Overview

Cylindrical fuses are standard in Europe. There are a range of different cylindrical fuse links and holders that comply with the standards IEC 60269-1, -2 and -3, and which are suitable for use in industrial applications.
In South West Europe they are also approved for use in residential buildings.

The cylindrical fuse holders are also approved according to UL 512. The cylindrical fuse holders are tested and approved as fuse disconnectors according to the switching device standard IEC 60947-3. They are not suitable for switching loads.

Cylindrical fuse holders can be supplied with or without signal detectors. In the case of devices with signal detector, a small electronic device with LED is located behind an inspection window in the plug-in module. If the inserted fuse link is tripped, this is indicated by the LED flashing.

The switching state of the fuse holder can be signaled over a side-retrofitted auxiliary switch, which enables the integration of the fuses in the automation process.

Benefits

- Devices with pole number 1P+N are available in a single modular width. This reduces the footprint by 50 %.
- The sliding catch for type ranges 8 x 32 mm and 10 x 38 mm enables the removal of individual devices from the assembly.
- Space for a spare fuse in the plug-in module enables the fast replacement of fuses. This saves time and money and increases plant availability.
- A flashing LED signals that a fuse link has been tripped. This enables fast detection during runtime.

More information

Mounting

Fuse holders, sizes 8 mm x 32 mm and 10 mm x 38 mm, have a sliding catch that enables the removal of individual devices from the assembly.

The infeed can be from the top or the bottom. Because the cylindrical fuse holders are fitted with the same anti-slip terminals at the top and the bottom, the devices can also be bus-mounted at the top or the bottom.

Auxiliary switches

Auxiliary switches are available for the cylindrical fuse holders. These are simply clipped onto the base using the factory-fitted brackets.

Sizes 8 mm × 32 mm and 10 mm × 38 mm:
The auxiliary switches support the remote display of the switching state ON or OFF of the fuse holder.

Sizes 14 mm × 51 mm and 22 mm × 58 mm:
The auxiliary switches support the remote display of fuse failure. However, fuse links with strikers are required for this function. When the fuse is tripped, a small striking pin - the striker - shoots out of the front of the fuse. Over an armature link in the auxiliary switch, the kinetic energy of this striker is used to switch a mini switch, which then initializes this signal over a floating contact.

* You can order this quantity or a multiple thereof.

Compact fuse holders for motor starter combinations

Overview

Fused motor starter combinations can be configured with the fuse holders. The contactor and the fuse holder can be mounted directly next to each other.

The strong current-limiting fuses ensure a type 2 protection level (coordination according to IEC 60947-4, no damage protection) for the contactors.

The UL version has an SCCR value of 200 kA.

The accessories are generally UL-certified.

Customers can mount an auxiliary switch which signals the switching state or prevents the fuse holder from switching off under load by interrupting the contactor control, thus increasing safety for the operator and process.

Busbars and a matching three-phase feeder terminals complete the product range.

Cylindrical fuse holder class CC with signal detector and mounted auxiliary switch

Installation configuration of a cylindrical fuse holder and a SIRIUS contactor on busbar adapter for the 60 mm busbar system.

Overview

Class CC fuses are used for "branch circuit protection".

The enclosed fuse holders are designed and tested to comply with the US National Electrical Code NEC 210.20(A). This means that when subject to continuous operation, only 80 % of the rated current is permissible as operational current.

An operational current of 100 % of the rated current (30 A) is only permissible short-time.

The devices are prepared for the inscription labels of the ALPHA FIX terminal blocks 8WH8 120-7AA15 and 8WH8 120-7XA05.

There are three different series:

- Characteristic: slow 3NW1 ...-0HG
  For the protection of control transformers, reactors, inductances. Significantly slower than the minimum requirements specified by UL for class CC Fuses of 12 s at 2 × I_n.
- Characteristic: quick 3NW2 ...-0HG
  For a wide range of applications, for the protection of lighting installations, heating, control systems
- Characteristic: slow, current-limiting, 3NW3 ...-0HG
  Slow for overloads and quick for short circuits. High current limitation for the protection of motor circuits.

Note:

Compact fuse holders for motor starter combinations class CC, see page 5/24.

Benefits

- For switchgear assemblies and machine manufacturers who export their systems to the USA or Canada.
- Easier export due to UL and CSA approvals for typical applications
- Modern design with touch protection to BGV A3 ensures safe installation.

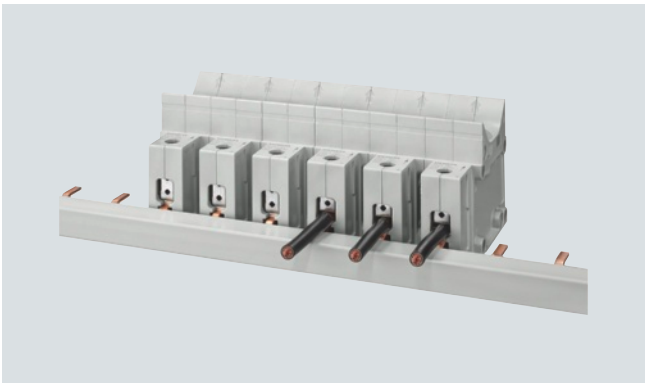
Overview

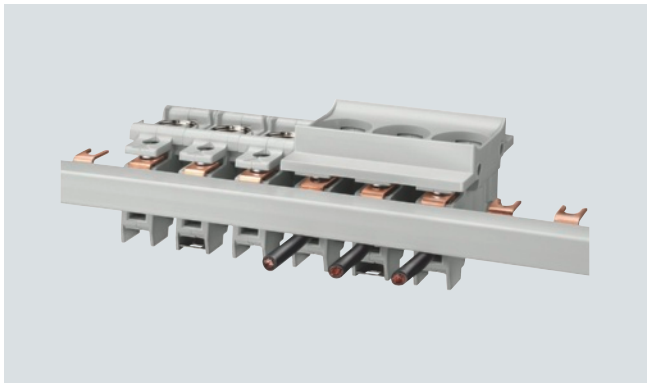
Busbars with pin-type connections can be used for NEOZED safety switching devices and fuse bases. Busbars in 10 mm^2 and 16 mm^2 versions are available.

Busbars with fork plugs are used for the most frequently used NEOZED fuse bases made of ceramic.

Benefits

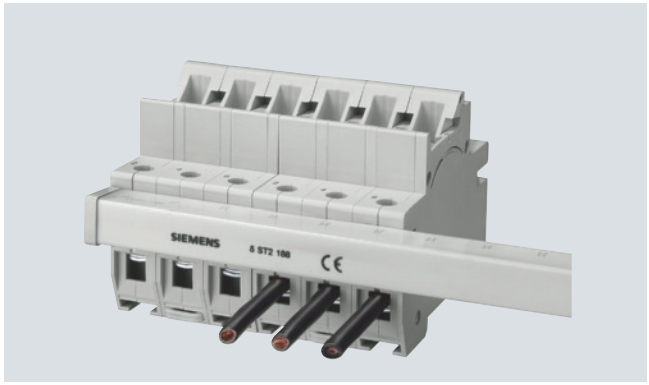


- Clear and visible conductor connection that can be easily checked when using NEOZED comfort base D02 and which facilitates cable entry.

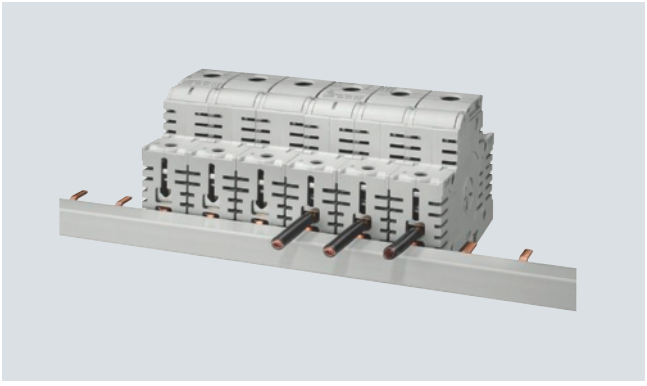


- Bus mounting of NEOZED fuse bases made of molded plastic on three-phase busbar with fork plug, which can be cut to length.

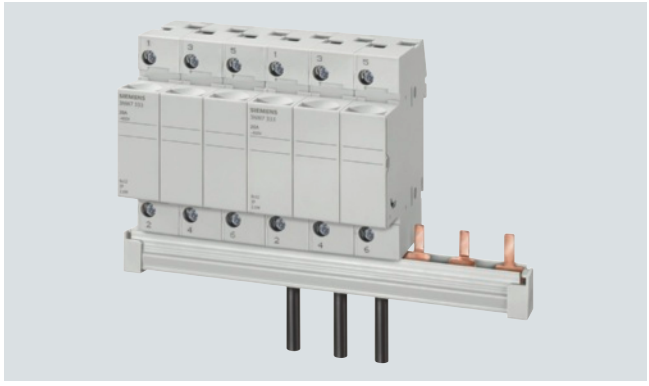
- Bus mounting of NEOZED fuse bases made of ceramic on three-phase busbar with fork plug, which can be cut to length.



- Bus mounting of MINIZED fuse switch disconnectors D01 with three-phase pin busbar, which can be cut to length with fork plug.

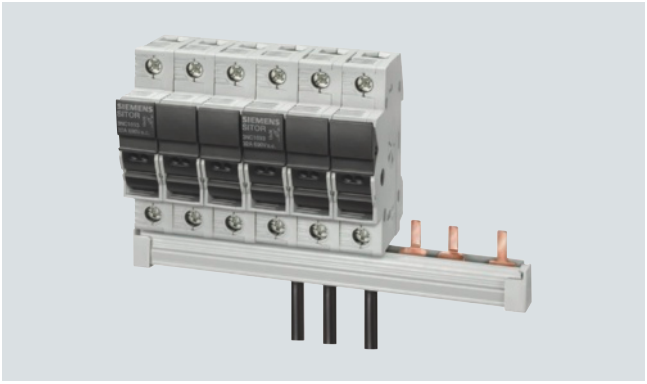


- Clear and visible conductor connection that can be easily checked when using MINIZED switch disconnectors D02. This facilitates cable entry and saves time.

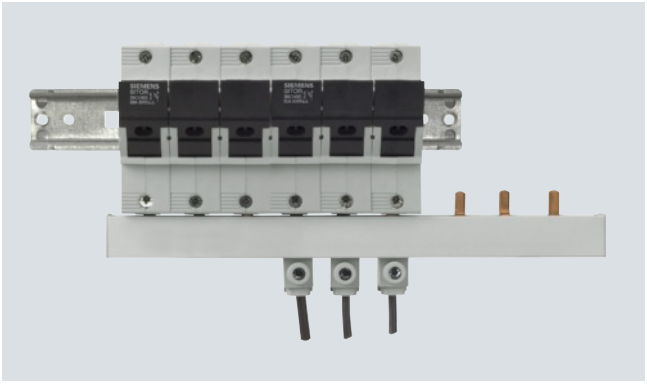


- Bus mounting of cylindrical fuse holders 8 mm × 32 mm and 10 mm × 38 mm with three-phase pin busbar which can be cut to length.

Busbar systems



- Bus mounting of SITOR cylindrical fuse holders 10 mm x 38 mm with the same terminal connection as class CC fuse holders with three-phase pin busbar which can be cut to length.



- Bus mounting with infeed through a connection terminal directly on the fuse holder up to a conductor cross-section of 35 mm².

Overview

LV HRC fuse systems (NH type) are used for installation systems in non-residential, commercial and industrial buildings as well as in switchgear assemblies of power supply companies. They therefore protect essential building parts and plants.

LV HRC fuse systems (NH type) are fuse systems designed for operation by experts. There are no constructional requirements for non-interchangeability of rated current and touch protection.

The components and auxiliary equipment are designed in such a way as to ensure the safe replacement of LV HRC fuse systems or isolation of systems.

LV HRC fuse links are available in the sizes 000, 00, 0, 1, 2, 3, 4 and 4a.

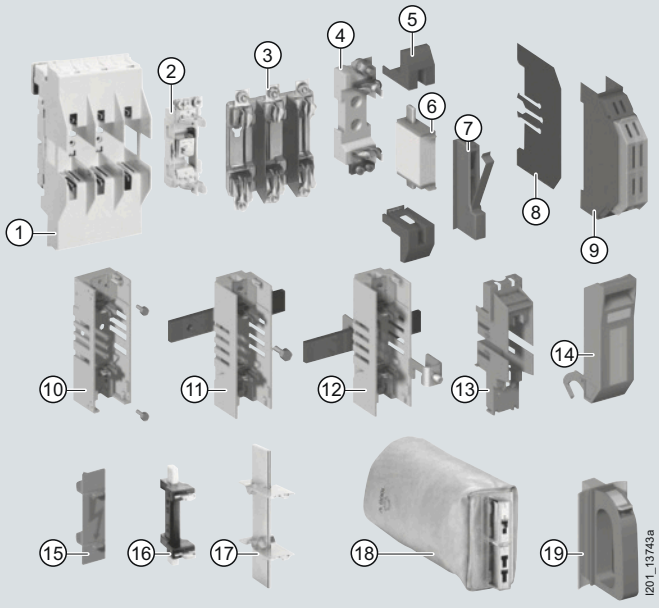
LV HRC fuse links are available in the following operational classes:

- gG for cable and line protection
- aM for the short-circuit protection of switching devices in motor circuits
- gR or aR for the protection of power semiconductors
- gS: The new gS operational class combines cable and line protection with semiconductor protection.

LV HRC fuse links of size 000 can also be used in LV HRC fuse bases, LV HRC fuse switch disconnectors, LV HRC fuse strips as well as LV HRC in-line fuse switch disconnectors of size 00.

The fuse links 300 A, 355 A and 425 A comply with the standard but do not have the VDE mark.

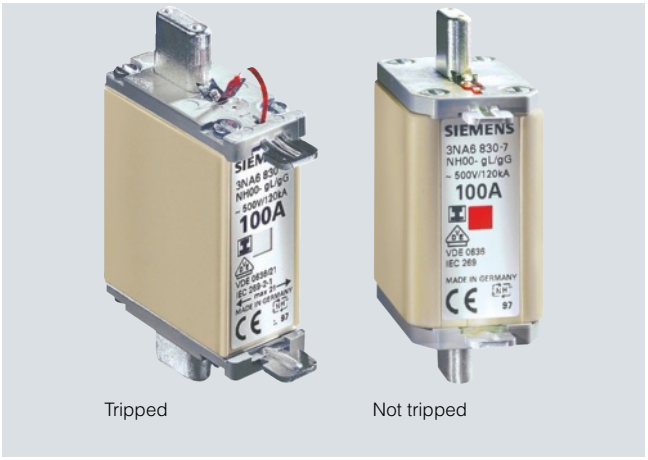
LV HRC components

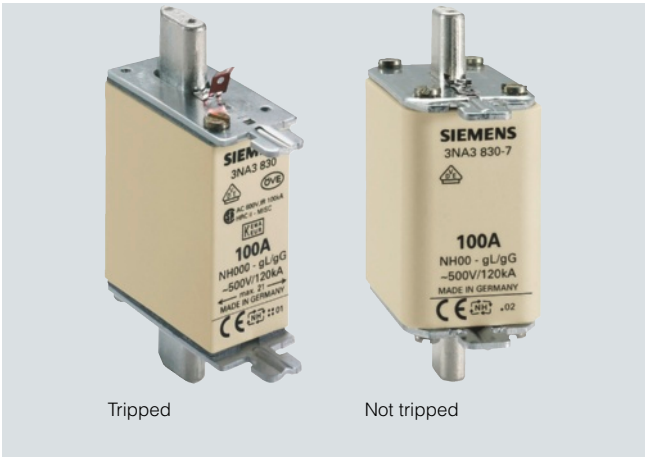


1 LV HRC fuse bases from the SR60 busbar system
2 LV HRC fuse bases for busbar mounting
3 LV HRC fuse base, 3-pole
4 LV HRC fuse base, 1-pole
5 LV HRC contact covers
6 LV HRC fuse link
7 LV HRC signal detectors
8 LV HRC partitions
9 LV HRC protective covers
LV HRC fuse bases with swivel mechanisms,
10 - For screw mounting on mounting plate
11 - For screw fixing on busbar systems
12 - For claw fixing on busbars
13 LV HRC protective cover for LV HRC fuse bases with swivel mechanism
14 LV HRC swivel mechanisms
15 LV HRC fuse base covers
16 LV HRC isolating links with insulated grip lugs
17 LV HRC isolating links with live grip lugs
18 LV HRC fuse pullers with sleeve
19 LV HRC fuse pullers

LV HRC fuse links

Benefits





- LV HRC fuse links with combination alarm signal the tripping of a fuse by a clear color change from red to white. This enables fast identification and replacement of the tripped fuse links. This increases plant availability.
- The insulated grip lugs made of metal are integrated in the top and bottom covers of the fuse link in molded plastic and provide greater safety during replacement. The mark shown below indicates that the grip lugs are insulated .
- In the standard series with front indicator, the front-mounted red indicator signals the tripping of a fuse.
- LV HRC fuse links are always equipped with silver-plated contact pins. This means that they are non-corroding and have less contact resistance. This ensures the long-term operational safety of the plants.

LV HRC signal detectors

Overview

LV HRC signal detectors are used for remotely indicating that the LV HRC fuse links have been tripped. 3 different solutions are available:

- 3NX1 021 signal detectors with signal detector link
  The LV HRC signal detectors with signal detector link support monitoring of LV HRC fuse links with non-insulated grip lugs of sizes 000 to 4 at 10 A or more. The signal detector link is connected in parallel to the LV HRC fuse link. In the event of a fault, the LV HRC fuse links are released simultaneously with the LV HRC fuse signaling link. A tripping pin switches a floating microswitch
- 3NX1 024 signal detector top
  The signal detector top can be used with LV HRC fuse links, sizes 000, 00, 1 and 2, which are equipped with non-insulated grip lugs and have a front indicator or combination alarm. It is simply plugged into the grip lugs
- 5TT3 170 fuse monitors
  If a fuse is tripped, the front indicator springs open and switches a floating microswitch. This solution should not be used for safety-relevant plants. For this purpose, we recommend our electronic fuse monitors.

Benefits

Uniform solution for all sizes

LV HRC signal detectors reliably indicate when a fuse has tripped. Tripped fuses are quickly located. This saves time and increases plant availability.

The LV HRC signal detector top is a cost-effective solution for the monitoring of Siemens LV HRC fuse links of sizes 000, 00, 1 and 2.

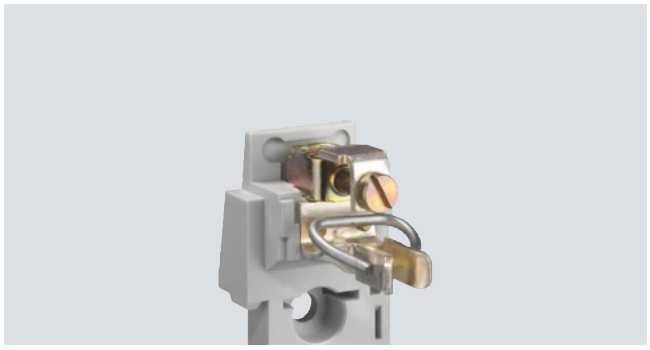
LV HRC sockets and accessories

Overview

Terminals for all applications

Flat terminals with screws are suitable for connecting busbars or cable lugs. They have a torsion-proof screw connection with shim, spring washer and nut. When tightening the nut, always ensure compliance with the specified torque due to the considerable leverage effect.

The double busbar terminal differs from the flat terminal in that it supports connection of two busbars, one on the top and one at the bottom of the flat terminal.



The modern box terminal ensures efficient and reliable connection to the conductors. They support connection of conductors with or without end sleeves.

With the flat terminal with nut, terminal lug of the nut is torsion-proof. When tightening the nut, the torque must be observed because of the considerable leverage effect.

Up to three conductors can be clamped to the terminal strip.

The plug-in terminal is equipped for connecting two conductors.

One conductor can be clamped to the saddle-type terminal.

Benefits

- The silver-plated Lyra contact provides a large contact area for the pin of the LV HRC fuse link. This improves heat transmission and lowers the temperature. It also minimizes the aging of the fuse link in the maximum load range, in particular when using SITOR fuses
- The large contact area also facilitates replacement of LV HRC fuse links
- The spring washer tensioning the contact is mechanically galvanized. This will prevent hydrogen embrittlement. The contact is resistant to aging and there will be no dreaded annealing of contacts, which considerably improves operating safety.

SITOR LV HRC design

Overview

SITOR fuses protect power semiconductors from the effects of short circuits because the super quick disconnect characteristic is far quicker than with conventional LV HRC fuse systems. They protect expensive devices and system components, such as converters with fuses in the input and the DC link, UPS systems and soft starters for motors.

Panel mounting requirements have given rise to various connection versions and designs.

The fuses with blade contacts comply with IEC 60269-2 and are suitable for installation in LV HRC fuse bases, in LV HRC fuse switch disconnectors and switch disconnectors with fuses. They also include fuses with slotted blade contacts for screw fixing with 110 mm mounting dimension, whose sizes are according to IEC 60269-4.

Fuses with slotted blade contacts for screw fixing with 80 mm or 110 mm mounting dimension are often screwed directly onto busbars for optimum heat dissipation. Even better heat transmission is provided by the compact fuses with M10 or M12 female thread, which are also mounted directly onto busbars.

Bolt-on links with 80 mm mounting dimension are another panel-mounting version for direct busbar mounting.

The fuses for SITOR thyristor sets, railway rectifiers or electrolysis systems were developed specially for these applications.

The LV HRC bases and safety switching devices that can be used with SITOR fuses can be found on pages 5/44ff.

Fuse characteristics, configuration notes and the assignments of SITOR fuses to the fuse bases and 3NP and 3KL safety switching devices can be found at:
www.siemens.com/lowvoltage/manuals.

The new size 3 type ranges have a round ceramic body instead of a square one. These series are characterized by small I^2t values with low power dissipation and high capability under alternating load. The dimensions and functional dimensions correspond to the current standards IEC 60269-4/ EN 60269-4.

Note:

The ordering data of the fuses are listed in ascending order of the rated voltage in the selection tables.

Benefits

- SITOR fuses have a high varying load factor, which ensures a high level of operating safety and plant availability - even when subject to constant load change.
- The use of SITOR fuses in LV HRC bases or Siemens switch disconnectors has been tested with regard to heat dissipation and maximum current loading. This makes planning and dimensioning easier and prevents consequential damage.
- Our high standard of quality ensures good compliance with the characteristic curve and accuracy. This ensures long-term protection of devices.

Operational classes

Fuses are categorized according to function and operational classes. SITOR semiconductor fuses, in LV HRC design, are available in the following operational classes:

- aR: for the short-circuit protection of power semiconductors (partial range protection)
- gR: for the protection of power semiconductors (full range protection)
- gS: The gS operational class combines cable and line protection with semiconductor protection (full range protection).

[1] Special design

SITOR, cylindrical fuse design

Overview

SITOR cylindrical fuses protect power semiconductors from the effects of short circuits because the super quick disconnect characteristic is far quicker than that of conventional fuses. They protect high-value devices and system components such as semiconductor contactors, electronic relays (solid state), converters with fuses in the input and in the DC link, UPS systems and soft starters for motors up to 100 A.

The cylindrical design is approved for industrial applications. The cylindrical fuse links comply with IEC 60269.

Cylindrical fuse holders also comply with IEC 60269 and UL 512. The cylindrical fuse holders for 10 x 38 mm and 14 x 51 mm have been tested and approved as fuse switch disconnectors and the cylindrical fuse holders for 22 x 58 mm as fuse disconnectors according to the switching device standard IEC 60947-3. The utilization category and the tested current and voltage values are specified in the Table "Technical Specifications".

The cylindrical fuse holders have been specially developed for the application of SITOR fuse links with regard to heat tolerance and heat dissipation and are therefore not recommended for standard applications.

Cylindrical fuse bases do not offer the same comprehensive touch protection as the fuse holders, but have better heat dissipation. The single-pole cylindrical fuse bases for 14 x 51 mm and 22 x 58 mm allow modular expansion to multipole bases.

Benefits

- Cylindrical fuses have an extremely compact design and a correspondingly small footprint
- The cylindrical fuses have IEC and UL approval and are suitable for universal use worldwide
- The use of SITOR cylindrical fuses in the cylindrical fuse holders and bases has been tested with regard to heat dissipation and maximum current loading. This makes planning and dimensioning easier and prevents consequential damage.
- The use of fuse holders as switch disconnectors expands the area of application of these devices and increases operating safety.

Overview

SILIZED is the brand name of the NEOZED fuses (D0 fuses) and the DIAZED fuses (D fuses) with super quick characteristic for semiconductor protection.
The fuses are used in combination with fuse bases, fuse screw caps and accessory parts of the standard fuse system.

SILIZED fuses protect power semiconductors from the effects of short circuits because the super quick disconnect characteristic is far quicker than that of conventional fuses. They protect high-value devices and system components, such as semiconductor contactors, static relays, converters with fuses in the input and in the DC link, UPS systems and soft starters for motors up to 100 A.

When using fuse bases and fuse screw caps made of molded plastic, always heed the maximum permissible power loss values due to the high power loss (power dissipation) of the SILIZED fuses.
When using these components, the following maximum permissible power loss applies:
- NEOZED D02: 5.5 W
- DIAZED DII: 4.5 W
- DIAZED DIII: 7.0 W

For this reason, sometimes a thermal permanent load of only 50 % is possible.

The DIAZED screw adapter DII for 25 A is used for the 30 A fuse link.

Benefits

- SILIZED fuses have an extremely compact design. This means they have a very small footprint – particularly the NEOZED version.
- The rugged and well-known DIAZED design complies with IEC 60269-3. It is globally renowned and can be used in many countries.
- A huge range of fuse bases and accessories are available for the NEOZED and DIAZED versions of the SILIZED fuses. This increases the application options in many areas.

Overview

- Special requirements are placed on fuses for application in photovoltaic systems. These fuses have a high DC rated voltage and a disconnect characteristic specially designed to protect PV modules and their connecting cables (the newly defined operational class gPV). Moreover, highly variable load currents and a broad temperature range play an important role. The requirements were incorporated into an international standard only in recent years, now published as IEC 60269-6. All Siemens PV fuses comply with this new standard.
- The cylindrical fuses of size 10 x 38 are used in order to protect trains.
- The LV HRC fuse systems of size 1 to 3L are used in order to protect groups (PV sub-arrays) or as cumulative fuses before the inverter. For the fuses of size 1 the standard 3NH fuse bases are available. For the fuses of size 1L, 2L and 3L we have developed a special 3NH7..-4 fuse base with a swiveling mechanism which offers comprehensive touch protection. Here, it is possible to change fuses in safety and without a fuse handle.
- The cylindrical fuse holders can be supplied in single-pole and two-pole versions with and without signal detectors. In the case of devices with signal detector, a small electronic device with LED is located behind an inspection window in the plug-in module. If the inserted fuse link is tripped, this is indicated by the LED flashing.
- The fuse holders, size 10 mm × 38 mm, have
- A sliding catch that enables the removal of individual devices from the assembly. The infeed can be from the top or the bottom. Because the cylindrical fuse holders are fitted with the same anti-slip terminals at the top and the bottom, the devices can also be bus-mounted at the top or the bottom.
- The cylindrical fuse holders and the 3NH7..-4 fuse bases comply with IEC 60269-2 and are regarded as fuse disconnectors in the sense of the switching device standard IEC 60947. Under no circumstances are they suitable for switching loads.
- The correct selection and dimensioning of these fuses must take account of the specific operating conditions as well as the data of the PV modules when calculating the voltage and the current.

Benefits

- Protection of the modules and their connecting cables in the event of reverse currents
- Safe tripping in case of fault currents reduces the risk of fire due to DC electric arcs
- Safe separation when the fuse holder / fuse base is open

	**5SD7 surge arresters for measuring and control technology**	6/14	With plug-in protective modules for measuring and control technology for installation in signal circuits.	EN 61643-21	✓	--	✓

Overview

Type 1 lightning arresters are the most powerful overvoltage protection. They protect low-voltage systems against any overvoltage or high impulse currents that may be triggered by a direct or indirect lightning strike.

All lightning arresters are fitted with a mechanical fault indication, which does not require an extra power supply. The lightning conductors can therefore also be used in the pre-counter area.

The protective modules are available as connectors. The majority of lightning arresters have a remote signaling contact, which signals if the device fails.

Overview

Combination surge arresters, type 1 + 2 are compact designs comprising lightning arresters (type 1) and surge arresters (type 2). They protect low-voltage systems against overvoltages triggered by lightning strikes or by switching operations in the network.

A thermal isolating arrester for the varistors offers a high degree of protection against overload. The protective modules are available as connectors. All combination surge arresters have a remote signaling contact, which signals if the device fails.

Overview

Surge arresters type 2 are used downstream of lightning arresters type 1 in main distribution boards or sub-distribution boards. They protect low-voltage systems against transient overvoltages, such as those caused by switching operations. A thermal isolating arrester for the varistors offers a high degree of protection against overload. The protective modules are available as connectors. The surge arresters have an optional remote signaling contact, which signals if the device fails.

5SD7 surge arresters, type 3

Overview

Type 3 surge arresters are installed downstream of type 2 surge arresters in sub-distribution boards, as close as possible to the load. The protective modules are available as connectors. In the event of a power failure, a remote signaling is output over an optocoupler with open collector output.

	TN-C systems	**5SD7 lightning arresters, type 1** Narrow design 5SD7 414-2, 5SD7 414-3 Wide design 5SD7 413-1, 5SD7411-1 With or without remote signaling 
	TN-S and TT systems	**5SD7 combination surge arresters, type 1 and type 2** 5SD7 444-1 With remote signaling 
	TN-C systems	**5SD7 combination surge arresters, type 1 and type 2** 5SD7 443-1, 5SD7441-1 With remote signaling 
	IT systems without N conductor incorporated in the cable	Typically, IT systems are only installed in special building sections. TN-C, TN-S and TT systems are generally still used in the area of the main distribution board. In this case, the protective devices shown above must be installed.
	IT systems with N conductor incorporated in the cable	

Medium protection

For installation upstream of counters in main distribution boards or in combined main/sub-distribution boards

Fine protection

For installation directly upstream of the terminal equipment

5SD7 surge arresters, type 2

Narrow design
5SD7 424-0, 5SD7 424-1

Standard design
5SD7 464-0, 5SD7 464-1

With or without remote signaling

Only required if the distance between the main and sub-distribution boards is **> 10 m**

Surge arresters, type 3

For installation in sub-distribution boards or control cabinets

5SD7 432-x and 5SD7 434-1

With remote signaling

5SD7 surge arresters, type 2

Narrow design
5SD7 423-0, 5SD7 423-1

Standard design
5SD7 463-0, 5SD7 463-1

With or without remote signaling

Only required if the distance between the main and sub-distribution boards is **> 10 m**

5SD7 surge arresters, type 2

Narrow design
5SD7 424-0, 5SD7 424-1

Standard design
5SD7 464-0, 5SD7 464-1

With or without remote signaling

5SD7 surge arresters, type 2

Narrow design
5SD7 423-0, 5SD7 423-1

Standard design
5SD7 463-0, 5SD7 463-1

With or without remote signaling

5SD7 surge arresters, type 2

Narrow design
5SD7 424-0, 5SD7 424-1

Standard design
5SD7 464-0, 5SD7 464-1

With or without remote signaling

Only required if the distance between the main and sub-distribution boards is **> 10 m**

5SD7 surge arresters, type 2

Narrow design
5SD7 423-0, 5SD7 423-1

Standard design
5SD7 463-0, 5SD7 463-1

With or without remote signaling

Only required if the distance between the main and sub-distribution boards is **> 10 m**

5SD7 surge arresters, type 2

5SD7 473-0, 5SD7 473-1
3-pole (3+0 circuit)
U_c = 580 V AC
With or without remote signaling

5SD7 surge arresters, type 2

5SD7 485-0, 5SD7 485-1
4-pole (4+0 circuit)
U_c = 440 V AC
With or without remote signaling

5SD7 surge arresters for measuring and control technology

Overview

The surge arresters for measuring and control technology are overvoltage protection modules that comprise two parts, a basic element and a plug-in part. Their application area is the protection of signal circuits.

The cable shields of basic elements can be either directly or indirectly grounded.

The mounting width of the new surge arrester is 1 MW.

Through the number of integrated paths, it is possible to protect up to four signal cores or two double cores against overvoltages.

The arresters are made up of two parts (plug-in part and base element).

Mechanical encoding ensures protection against reverse polarity.

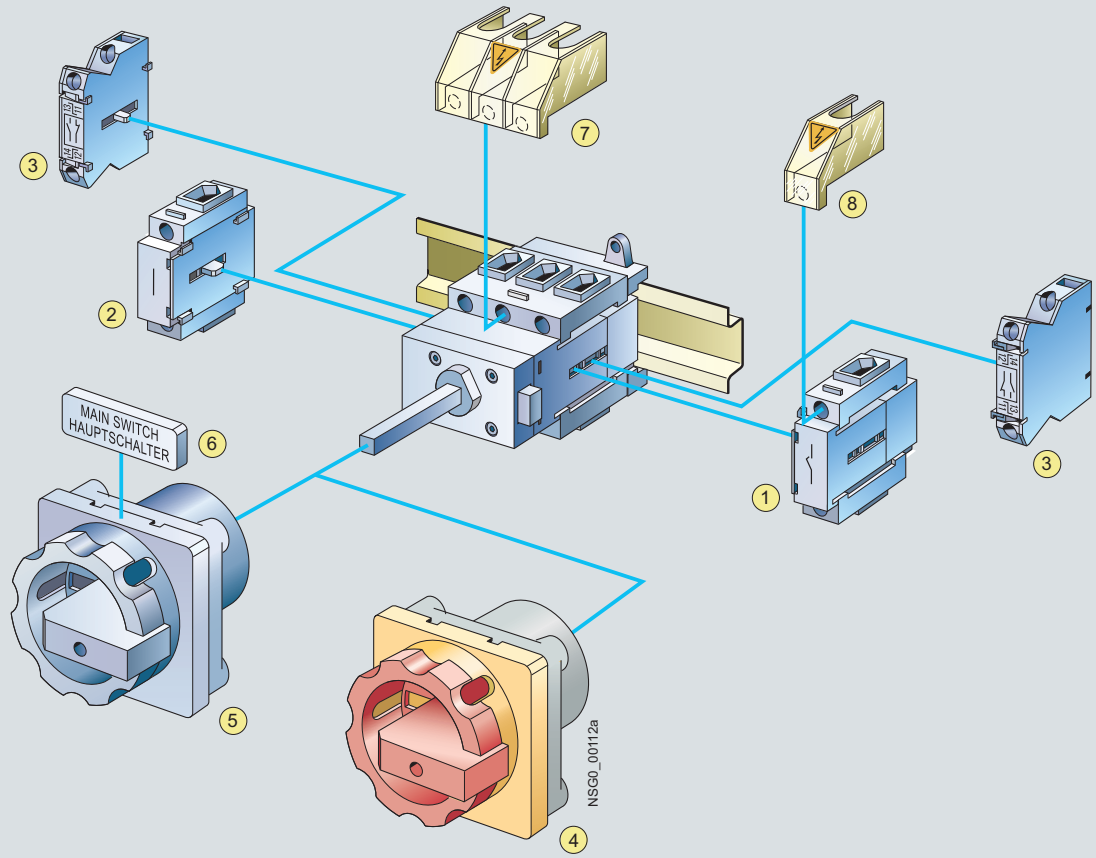
		Order No.	Page
Switch disconnectors			
 3LD	**Main control and EMERGENCY-STOP switches 16 A to 250 A** • Devices for front mounting, floor mounting with door-coupling rotary operating mechanism, distribution board mounting and in molded-plastic enclosures • Front mounting with four-hole and center hole arrangement • 3, 4 and 6-pole versions • 3 and 4-pole load transfer switches • Solar plant isolators 800 V DC	**3LD**	7/3
 5TE1	**100 A switch disconnectors up to 200 A** • For floor and distribution board mounting • 2, 3 and 4-pole versions	**5TE1**	7/27
 3KA/3KE	**63 A switch disconnectors up to 1000 A** • Devices for floor mounting with handle, with door-coupling rotary operating mechanism, in molded-plastic enclosures and for mounting in control cabinet side panels • 3 and 4-pole versions • Accessories for use as load transfer switches and parallel switches	**3KA, 3KE**	7/32
 3VT	**160 A switch disconnectors up to 1600 A** • Compact design allowing it to be used where space is limited. • 3 and 4-pole versions • Coordinated, comprehensive range of accessories for greater functionality, e. g. - Motorized operating mechanisms - Shunt and undervoltage releases for remote control - Switching state interrogation by means of auxiliary and alarm switches	**3VT**	7/44
Switch disconnectors with fuses			
 3KL	**Switch disconnectors with fuses up to 800 A** • Devices for floor mounting with door-coupling rotary operating mechanism and for mounting in control cabinet side panels • 3KM versions with isolating plug connector for mounting on vertical busbars • 3 and 4-pole versions • Suitable for NH and BS 88 fuse systems	**3KL, 3KM**	7/66
 3NJ62	**In-line switch disconnectors with fuses, plug-in type, up to 630 A** • 2, 3 and 4-pole versions • Suitable for NH and BS 88 fuse systems • Manually operated or with motorized operating mechanism • Optionally with integrated current transformers, auxiliary switches and electronic fuse monitoring	**3NJ62**	7/86
Fuse switch disconnectors			
 3NP1	**Fuse switch disconnectors up to 630 A** • Connection components are available for flat connection, saddle terminal connection, prism terminal connection and box terminal connection • Electromechanical and electronic fuse monitoring with/without network monitoring function • Mounting versions for floor mounting and 40/60 mm busbar system	**3NP1 / 3NP5**	7/111
 3NJ4/3NJ5	**In-line fuse switch disconnectors up to 2000 A** • 1- and 3-pole switchable versions • Versions for secondary-side protection of transformers • In-line infeed block versions up to 2000 A with isolating links • Connection components are available for flat connection, stud bolt connection, saddle terminal connection, prism terminal connection and box terminal connection • Versions with/without integratable current transformer • Versions with/without electronic fuse monitoring	**3NJ4, 3NJ5**	7/141

Overview



1. 4th contact (N conductor)
2. N or PE/ground terminal, continuous
3. Auxiliary switch 1 NO + 1 NC
4. Rotary operating mechanism, red/yellow
5. Rotary operating mechanism, black
6. Front plate, English/German
7. Terminal cover, three-pole
8. Terminal cover, single-pole

The 3LD main control and EMERGENCY-STOP switches are manually operated switch disconnectors according to IEC 60947-3/VDE 0660 Part 107 (EN 60947-3) and comply with the conditions for switch disconnectors.

In EN 60204-1 (VDE 0113 Part 1), main control switches are called "disconnector units", while EMERGENCY-STOP switches are termed "devices for emergency shutdown".

The 3LD switches for 16 to 250 A are approved according to UL 508 and can be used as "manual motor controllers" and "motor disconnects". In addition, the 3LD switch disconnectors have CCC certification.

Maintenance personnel can protect themselves against unauthorized startup with padlocks (up to three can be fitted).

The 3LD switches can be used in any mounting position.

Application

The 3LD switches are used for switching main and auxiliary circuits, but also for switching induction motors and other loads during maintenance and repair work.

They can be used as:

- ON-OFF switches
- EMERGENCY-STOP switches
- Main control switches according to EN 60204-1.

Introduction

Design

Construction of the contacts

Each switch has three adjacent contact elements[1]. A fourth leading contact for switching the N conductor, a continuous PE terminal, an auxiliary switch (1 NO + 1 NC) can be fitted to each side of the switch. The auxiliary switches operate as leading contacts on opening. On opening, the NO contact opens before the main contacts, so that a contactor carries the switching capacity in the circuit and the maintenance or safety switch switches at zero current. On closing, the auxiliary switch switches later than or at the same time as the main contacts.

Construction of rotary operating mechanisms

The rotary operating mechanisms of the switches for front or floor mounting are mounted on control cabinet doors, front or side panels with four-hole or center-hole mounting with a standard diameter of 22.5 mm and operated from the outside. In their Off position, they can be locked with up to three padlocks with a hasp thickness of 8 mm. Controls with defeatable door-coupling rotary operating mechanism are available in addition.

- Switch position indicator:
  The switch position is clearly marked with direction arrows and an "O" for OFF and a "I" for ON at the front.
- Switches for front mounting:
  The switches for front mounting are connected directly to the rotary operating mechanism through the fixing screws or - in the case of center-hole mounting - a special-purpose coupling.
- Switches for floor mounting:
  The switches for floor mounting are snapped onto 35 mm standard mounting rails according to EN 60715 or screw-mounted on mounting plates. The actuators are connected to the lower section of the switch through a door coupling, which can be released in its zero position, and a 300 mm long switch shaft. When the control cabinet door is open, the switch can be protected against inadvertent operation by removing the switch shaft from the lower section of the switch.
  The mounting depth can be adapted to individual requirements by adjusting the switch shaft length.
- Switches for distribution board mounting:
  The switches for distribution board mounting are suited for operation in switchboards and for switching inside control cabinets or distributors. They have cap and mounting dimensions according to DIN 43880 and can be fitted under the same cover together with miniature circuit breakers. The selector switches can be locked in their Off position with up to 2 padlocks with a hasp thickness of 6 mm.
- Switches in molded-plastic enclosure:
  For surface mounting of individual main control and EMERGENCY-STOP switches, molded plastic-enclosed switches to degree of protection IP65 are used. The actuators can be locked in their Off position with three padlocks with a hasp thickness of 8 mm.
  The molded-plastic enclosures each contain an N and/or a PE terminal.

[1] 16 A versions have four contact elements; 3-pole changeover switches and 6-pole main control switches have six contact elements.

3LD2 704-0TK53 switch for front mounting with rotary operating mechanism

3LD2 222-0TK1 switch for front mounting with knob

3LD2 122-7UK01 3-pole changeover switch for front mounting with knob

3LD2 103-3VK53 6-pole switch for front mounting with rotary operating mechanism

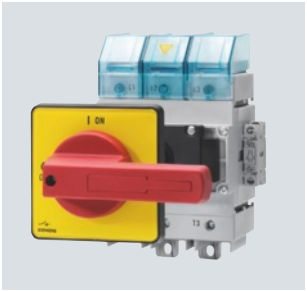
3LD2 144-0TK53 switch for floor mounting with rotary operating mechanism and door coupling

3LD2 530-0TK11 switch for distribution board mounting with knob

3LD2 264-0TB5 switch in molded-plastic enclosure

3LD2 217-1TL13 switch for floor mounting with rotary operating mechanism and defeatable door coupling

3LD2 265-8VQ51-0AF6 solar plant isolator



3LD2 418-0TK13 switch for floor mounting, 250 A, with rotary operating mechanism and door coupling

3LD Main Control and EMERGENCY-STOP Switches up to 250 A

Front mounting

Selection and ordering data

Main control and EMERGENCY-STOP switches with rotary operating mechanism/knob-operated mechanism

- Lockable in 0 position with up to 3 padlocks
- Degree of protection at front side IP65
- All versions with rotary operating mechanism
  Exception: 3LD2 3 & 3LD2 4 with knob-operat. mechanism
- Including terminal cover for the infeed side
- Front plate: - 3LD2 0, 3LD2 1, 3LD2 2: 67 mm × 67 mm
  - 3LD2 5 to 3LD2 8: 90 mm × 90 mm
  - 3LD2 3 to 3LD2 4: 96 mm × 96 mm

Four-hole mounting

3LD2 203-0TK51

3LD2 704-0TK53

	Main control and EMERGENCY-STOP switches with defeatable door-coupling rotary operating mechanism										
	The 3LD main control and EMERGENCY-STOP switch with defeatable door-coupling rotary operating mechanism enables you to conduct repairs, maintenance work or tests on electrical plants and machines without having to interrupt their operation. With the help of the defeatable door-coupling rotary operating mechanism, an electrician can bypass the interlock in ON position and open the control cabinet door with the plant activated.										
	3LD main control and EMERGENCY-STOP switches with defeatable door-coupling rotary operating mechanism are approved according to UL508.										
	• With 300 mm switch shaft										
	• Lockable in 0 position with up to 3 padlocks										
	• Degree of protection at front side IP65										
	• Door-coupling rotary operating mechanism with integrated tolerance compensation										
	• Mounting using screws or snap-on mounting on 35 mm standard mounting rails										
	• Including terminal cover for the infeed side

Defeatable door-coupling rotary operating mechanisms from 100 A - 250 A

For switch disconnectors with door-coupling rotary operating mechanisms, a defeatable door-coupling rotary operating mechanism can be assembled with the following components from the 8UC7 series.

The following components are to be used for this purpose:

- For switch disconnectors with door-coupling rotary operating mechanisms 3LD2 7 and 3LD2 8:
  - 8UC71 10-1BB
  - 8UC71 20-3BB
  - 8UC6 011
- For switch disconnectors with door-coupling rotary operating mechanisms 3LD2 3 and 3LD2 4:
  - 8UC72 10-1BB
  - 8UC72 20-3BB
  - 8UC6 012

Overview

The 5TE1 switch disconnectors are available from 100 A to 200 A in 3 and 4-pole versions and can be used as main control switches, repair switches, outgoing feeder switches and emergency mains switching off device.

The series corresponds to the requirements of IEC/EN 60947-3 and its key features are its compact and robust design, high short-circuit strength, high DC breaking capacity and comprehensive accessories.

Its small footprint means it is easy to install in all types of enclosures, distribution boards and control cabinets.

The devices are approved to UL 508 and KEMA certified.

Benefits

- Transparent enclosures ensure that the contact position is always visible
- Contacts with double breaks ensure reliable insulation characteristics
- Can be locked in the OFF position to allow for maintenance work
- With a red knob and yellow cap, it can also be used as an emergency system interrupter.

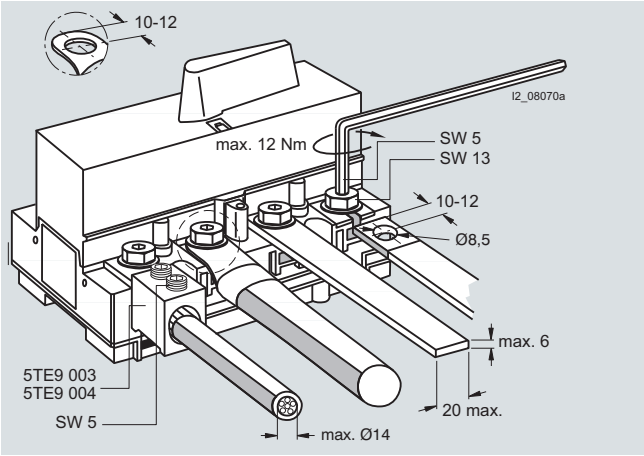
More information

Connection of 5TE1 3 and 5TE1 4 switches, 160 and 200 A

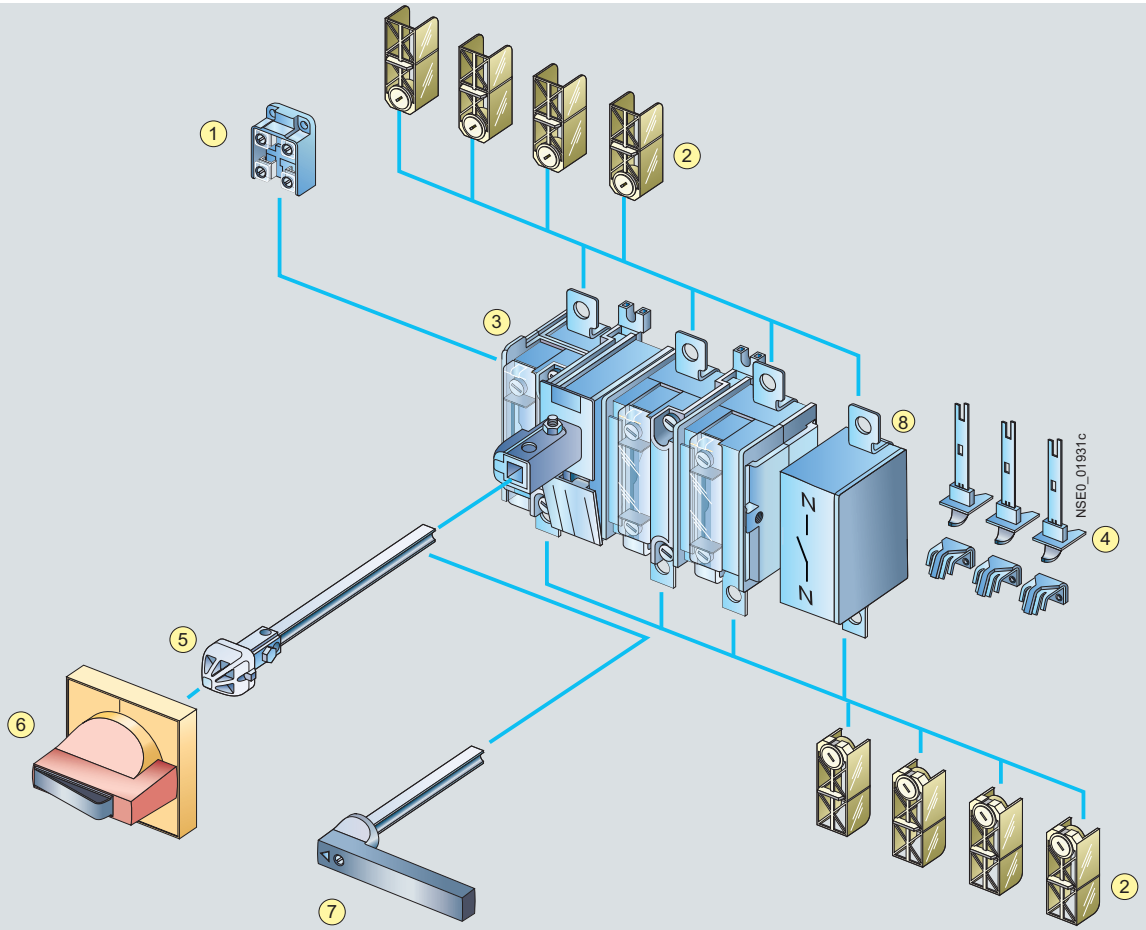


Design

- From 160 A: supplied with one terminal cover
- 160 A and 200 A: version for connection with cable lug
- Screw fixing on base plate
- Installation on standard mounting rail according to EN 60715, which is raised at least 5 mm from the base plate.

Introduction

Overview



1. Auxiliary switch (3SB for 3KA; 3KX for 3KE)
2. IP20 terminal cover (Operator side)
3. 3K switch disconnector
4. Arcing contacts (only for 3KE)
5. Coupling driver with extension shaft
6. 8UC7 door-coupling rotary operating mechanism in standard version (ti-grey) or EMERGENCY-STOP version (red/yellow).
7. 8UC9 handle for fixed mounting in standard version (black) or EMERGENCY-STOP version (red).
8. 4. Pole (optional, only for 3KA)

All components from the switch to the actuator are provided with non-interchangeability features.

For the 3KA switch disconnectors, complete kits for standard and EMERGENCY-STOP application are available for installation in the side and rear panels of control cabinets.

A changeover operating mechanism is available for the use of 2 switch disconnectors in the 3KE series as load changeover switches.

An operating linkage permits simultaneous switching of two 3KE switch disconnectors with identical or different rated operational currents.

Identical accessories for 3KA switch disconnectors and for 3KL and 3KM switch disconnectors with fuses simplify stock keeping.

Application

3KA and 3KE switch disconnectors are used as main control, EMERGENCY-STOP, maintenance and transfer switches in distribution boards for residential and non-residential buildings as well as industrial switchgears. As three and four-pole versions, they ensure activation and deactivation of the specified rated current under load. At the same time, they constitute a safety isolating function and isolating distance in all low-voltage circuits.

All 3K switch disconnectors are climate-proof and meet the requirements of IEC 60947-1, IEC 60947-3 and VDE 0660 Part 107. Switch disconnectors in the type-tested 8HP molded-plastic distribution board enclosure (degree of protection IP65) are available for use as safety switches.

For additional data, see catalog LV 10.2, chapter 18 "Installation distributors" and chapter 19 "Terminal blocks".

Applications

3KA switch disconnectors are implemented as main control switches and EMERGENCY-STOP switches for normal switching duty and isolation of main circuits and auxiliary circuits. Another field of application is the switching of induction motors and other loads in the event of maintenance and repair.

Main control and EMERGENCY-STOP switches are manually operated switch disconnectors according to IEC 60947-3 and VDE 0660 Part 107 (EN 60947-3) and comply with the conditions for switch disconnectors and the requirements of the machinery directive EN 60204-1.

Selection and ordering data

All switch disconnectors with degree of protection IP00
Conductor connecting screws are generally included in the scope of supply.

3KA, 3KE Switch Disconnectors up to 1000 A

Molded-plastic enclosures

Benefits

- Lockable with 3 padlocks
- Generous terminal compartment
- Degree of protection IP65
- Maintenance-free
- Easy mounting.

Application

Our main control and EMERGENCY-STOP switches provide absolute safety, even during maintenance and repair work. All-round safety for people and machines.

With their high degree of protection IP65, they can even withstand dust and water spray, providing unparalleled safety in the building and industrial installations as well as the food and chemical industry. Even with the enclosure open, they comply with protection class 2. IP20 is the minimum!

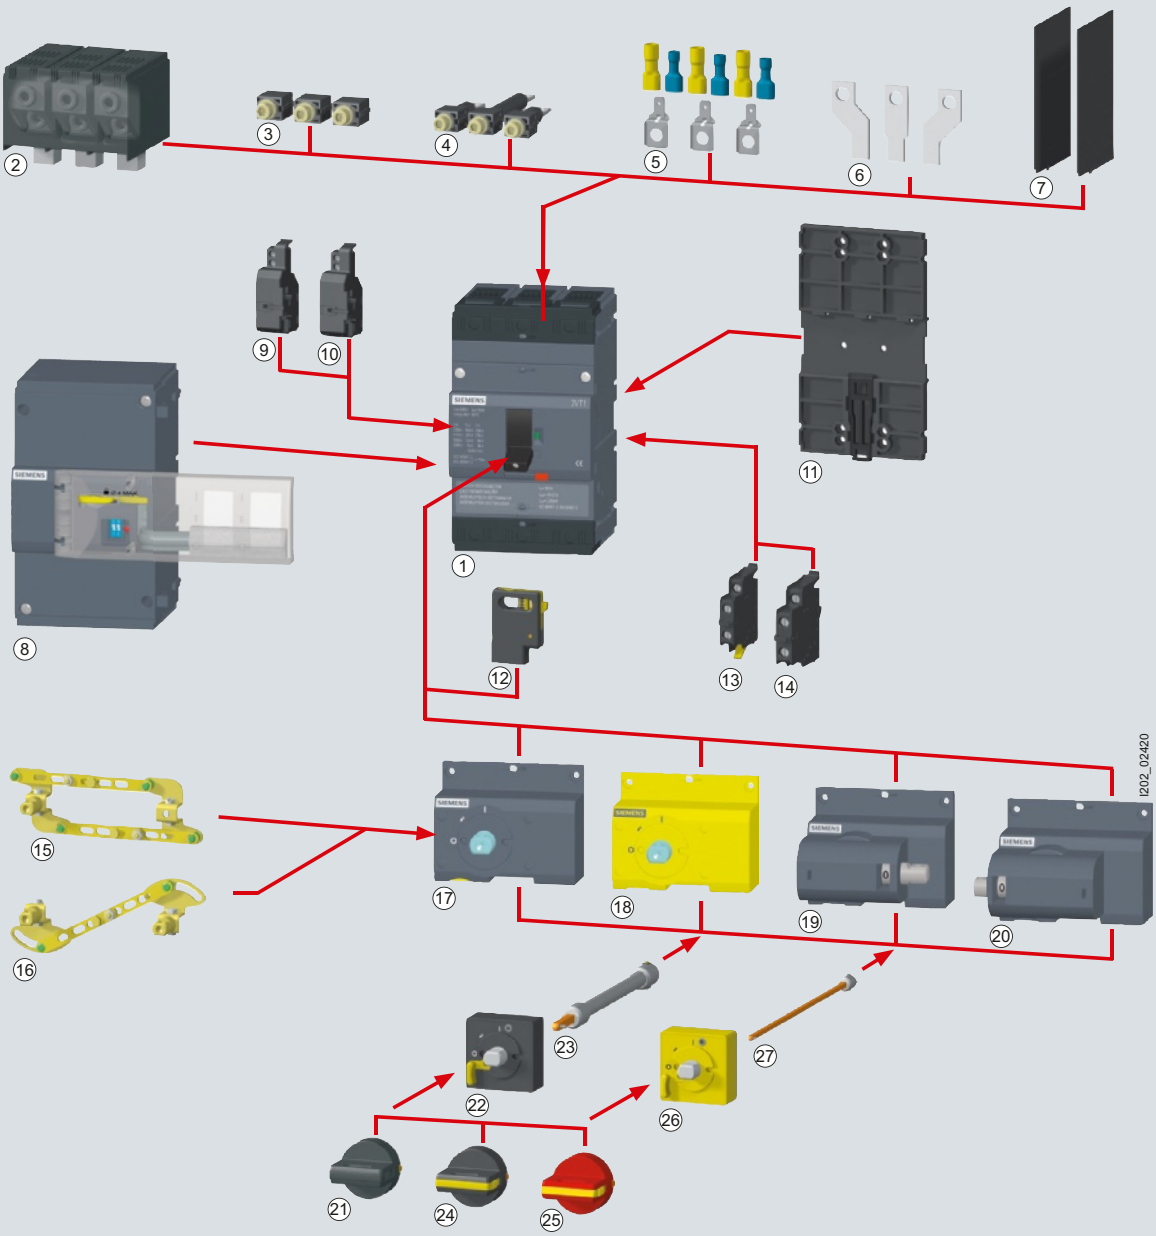
Introduction

Overview



1 Circuit breaker
2 Circular conductor terminal
3 Front connection
4 Rear connection
5 Auxiliary conductor terminal
6 Front connecting bus with increased pole spacing
7 Insulating barriers
8 Lateral rotary operating mechanism
9 Shunt release
10 Undervoltage release
11 Adapter to install on 35 mm DIN rail
12 Locking type lever
13 Signal switch
14 Auxiliary switch
15 Mechanical parallel switching
16 Mechanical interlocking
17 Front manual operating mechanism
18 Front manual operating mechanism
19 Lateral manual operating mechanism (right)
20 Lateral manual operating mechanism (left)
21 Non lockable knob
22 Coupling driver
23 Telescopic extension shaft
24 Lockable knob
25 Lockable knob
26 Coupling driver
27 Extension shaft

The 3VT switch disconnectors are a derivative of the corresponding 3VT circuit breakers. This has the advantage that they can be equipped with accessory components in a wide range of ways. The only difference between this version of the switch connectors and the circuit breakers is the absence of a release. They can be used up to a rated voltage of 690 V AC and 440 V DC.

Application

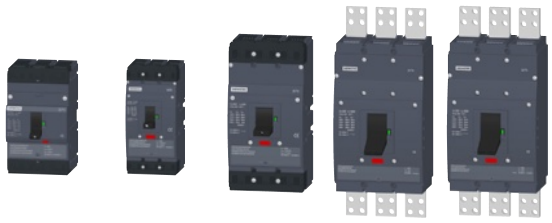
3VT switch disconnectors can be used as main control switches for sub-distribution boards, repair and transfer switches for cables, busbars or unit combinations.

As three and four-pole versions, they ensure activation and deactivation of the specified rated current under load. At the same time, they constitute a safety isolating function and isolating distance in all low-voltage circuits.

The position of the operating toggle lever always matches that of the contacts (positive operation).

All 3VT switch disconnectors meet the requirements of IEC 60947-1 and IEC 60947-3.

Technical specifications



Rated current	A	160	250	630	1000	1600
Number of poles		3 and 4	3 and 4	3 and 4	3	3
Rated insulation voltage	V	690				
Utilization category						
• 690 V AC		AC-23B				
• 440 V DC		DC-23B				
Rated short-time withstand current I_{cw}	kA_{rms}/1s	2	3	7.5	15	20
Rated short-circuit making capacity I_{cm}/U_e						
• At 415 V AC	kA	2.8	4.26	12.5	30	40
• At 440 V DC	kA	2.8	4.26	12.5	30	40
Endurance						
• Mechanical		20,000	30,000	20,000	10,000	10,000
• Electrical		6,000	3,000	5,000	4,000	4,000

Further accessories

	Version	DT	Order No.	Price per PU	PU (UNIT, SET, M)	PS*/ P. unit	PG	Weight per PU approx. kg
Accessories								
	Phase barriers In the case of a reversed connection (supply via terminals 2, 4 and 6) the phase barriers must also be installed on the underside. Not included in all switching units for the fixed-mounted version.							
	• For switching units, fixed-mounted versions	B	**3VT9 500-8CE30**		1	1 unit	193	0.264
	• For withdrawable version	B	**3VT9 500-8CF30**		1	1 unit	193	0.142
	**Terminal covers** Increases the degree of protection to IP20. Designed for withdrawable versions with front terminals. To improve safety during maintenance of the electrical device, we recommend installation of a terminal cover on both sides of the withdrawable device.							
	• For fixed-mounted versions with rear terminals	B	**3VT9 500-8CD30**		1	1 unit	193	0.287
	• For withdrawable versions with front terminals	B	**3VT9 500-8CC30**		1	1 unit	193	0.168
	**Insulator seals** Designed for fixed-mounted and withdrawable versions of switching units with rear terminals. The insulation seals are used to insulate the connection combinations for rear connection of the switchgear. Installation is recommended for all connection combinations with rear terminals.							
	• For rear terminals	B	**3VT9 500-8CG30**		1	1 unit	193	0.100
	**Locking devices for knob** Allows switch disconnector to be locked in the "manual off" position. For locking purposes up to three padlocks with a max. diameter of 4 ... 6 mm can be used.	B	**3VT9 500-3HL00**		1	1 unit	193	0.041
	**Sealing devices** Sealing for: • Overcurrent releases • Accessory compartment covers	B	**3VT9 500-8BN00**		1	1 unit	193	0.002
	**Fixing screws** • For withdrawable version	B	**3VT9 500-4SA40**		1	1 unit	193	0.144
	**Covers for pushbuttons** • In the case of motorized operating mechanisms the cover is sealable.	B	**3VT9 500-3MF20**		1	1 unit	193	0.019

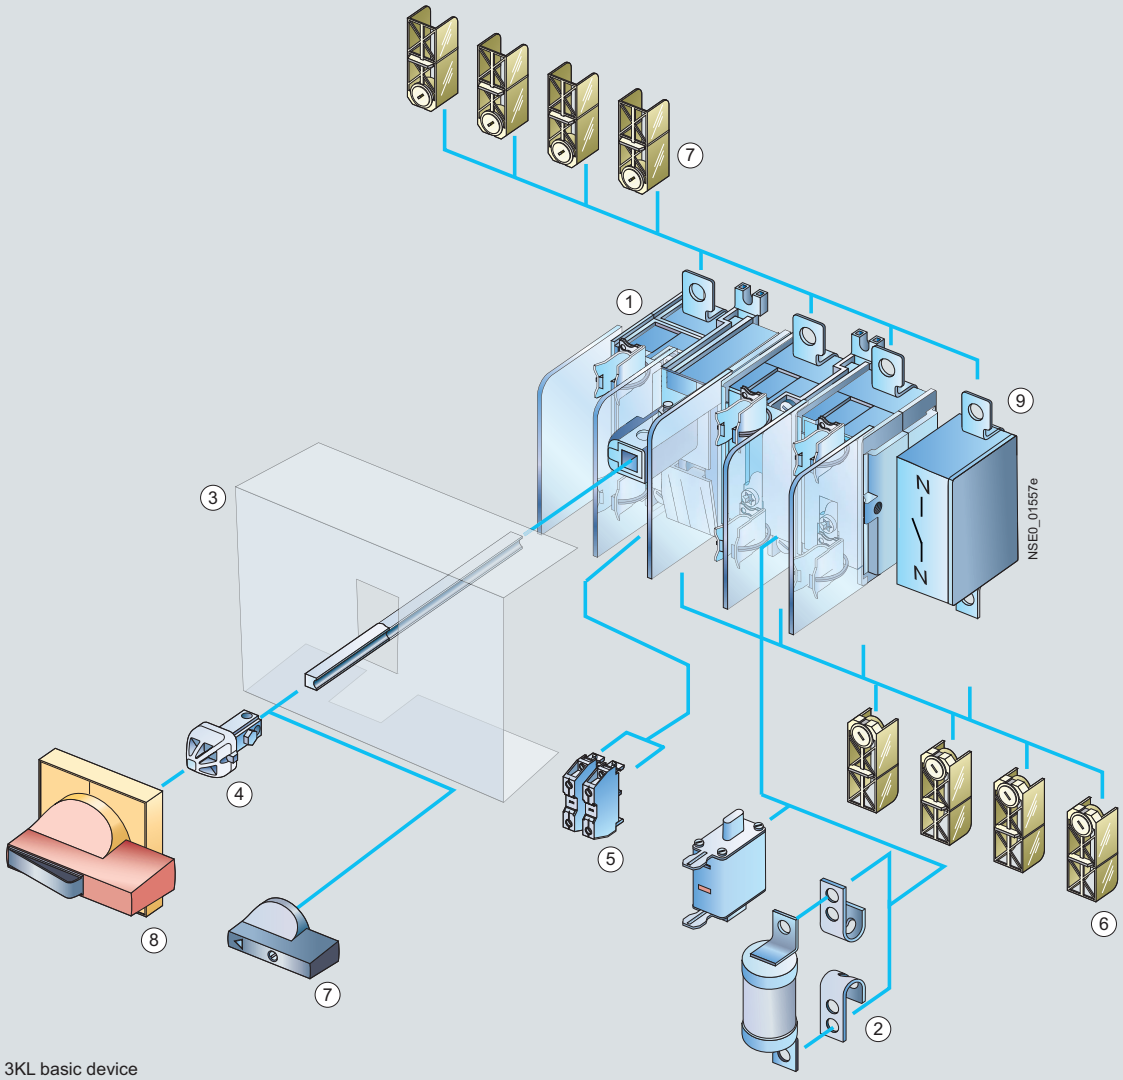
3KL Switch Disconnectors with Fuses up to 800 A

Introduction

Overview



1. 3KL basic device
2. Fuses, optionally BS-88 or LV HRC fuses
3. Terminal cover, IP20 (vertical to operator side)
4. Coupling driver with extension shaft
5. Standard products from the Siemens 3SB1 range are used as auxiliary switches.
6. Single-pole terminal cover from 63 A to 630 A, IP20 (vertical to operator side)

All components from the switch to the actuator are provided with non-interchangeability features.

Optional

7. 8UC9 knob for fixed mounting in standard version (black) or EMERGENCY-STOP version (red), or
8. 8UC7 door-coupling rotary operating mechanism in standard version (ti-grey) or EMERGENCY-STOP version (red/yellow)
9. 4. Pole (optional)

All switch disconnectors feature double contact interruption and an isolating distance. As a result, the fuses of the switch disconnectors are de-energized in the OFF position.
Generally, all 3K.5 switch disconnectors can be secured to the shaft with padlock against unauthorized reclosing.

Identical accessories for 3KA switch disconnectors and 3KL and 3KM switch disconnectors with fuses simplifies inventory.
Please inquire about a special version with reduced values that is particularly resistant to atmospheres high in sulfur, e. g. in the paper and cellulose processing industries.

Application

3KL switch disconnectors with fuses protect against overload and short-circuits as main control and EMERGENCY-STOP switches of switchgear assemblies, distribution boards, power supply and motor outgoing feeders.
In conjunction with Siemens SITOR semiconductor fuses, they are also used in UPS systems, frequency converters and capacitor control systems.

All 3K switch disconnectors are climate-proof and meet the requirements of IEC 60947-1, IEC 60947-3 and VDE 0660 Part 107.

1) Technical specifications for approval on request.

2) Configuring note: Max. permissible operating temperature for fuse blades 135 °C, for connections 100 °C.

3) 110 V (one conducting path).

4) With 3KL61 for operation -25 °C ... +35 °C, at +55 °C: I_{th} = 570 A.

5) With 3ND1 switchgear protection fuse.

6) AC-23B.

7) 220 V DC (L1 and L3 series-connected) or 110 V DC (one conducting path) at DC-23A.

8) At 440 V L/R = 4 ms, at 220 V L/R = 15 ms.

9) Only DC-22A (L/R = 2.5 ms).

10) At 440 V DC-22A, at 220 V DC-23A.

Note:

For the 3KL switch disconnectors, complete kits for standard and EMERGENCY-STOP application are available for installation in the side and rear panels of control cabinets.

3KL Switch Disconnectors with Fuses up to 800 A

Floor mounting

Selection and ordering data

All switch disconnectors with degree of protection IP00
Conductor connecting screws and fuse partitions are generally included in the scope of supply.

Fuse monitoring through 5TT3 170 safety monitor with a floating 1 NO signaling contact, see chapter 5 "Fuse systems".

Footnotes for page 7/68 and page 7/69:

1) Silver-plated fuse blades. Silver-plated isolating blades can be used if desired.

2) For the assignment of semiconductor fuses, see "Accessories".

3) With SITOR 3NE fuse links cULus-approved.

* You can order this quantity or a multiple thereof.

Selection and ordering data

All switch disconnectors with degree of protection IP00
Conductor connecting screws and fuse partitions are generally included in the scope of supply.

[1] Permissible load current in the switch disconnector.
In the case of cyclic loads, the currents may have to be reduced again (precise values on request).

[2] Due to the mechanical stress on the relatively long fuse blades, SITOR 3NE4 1 fuses should be switchable only occasionally and only at zero current.

[3] Values in black brackets apply to 3KL62 switch disconnectors.

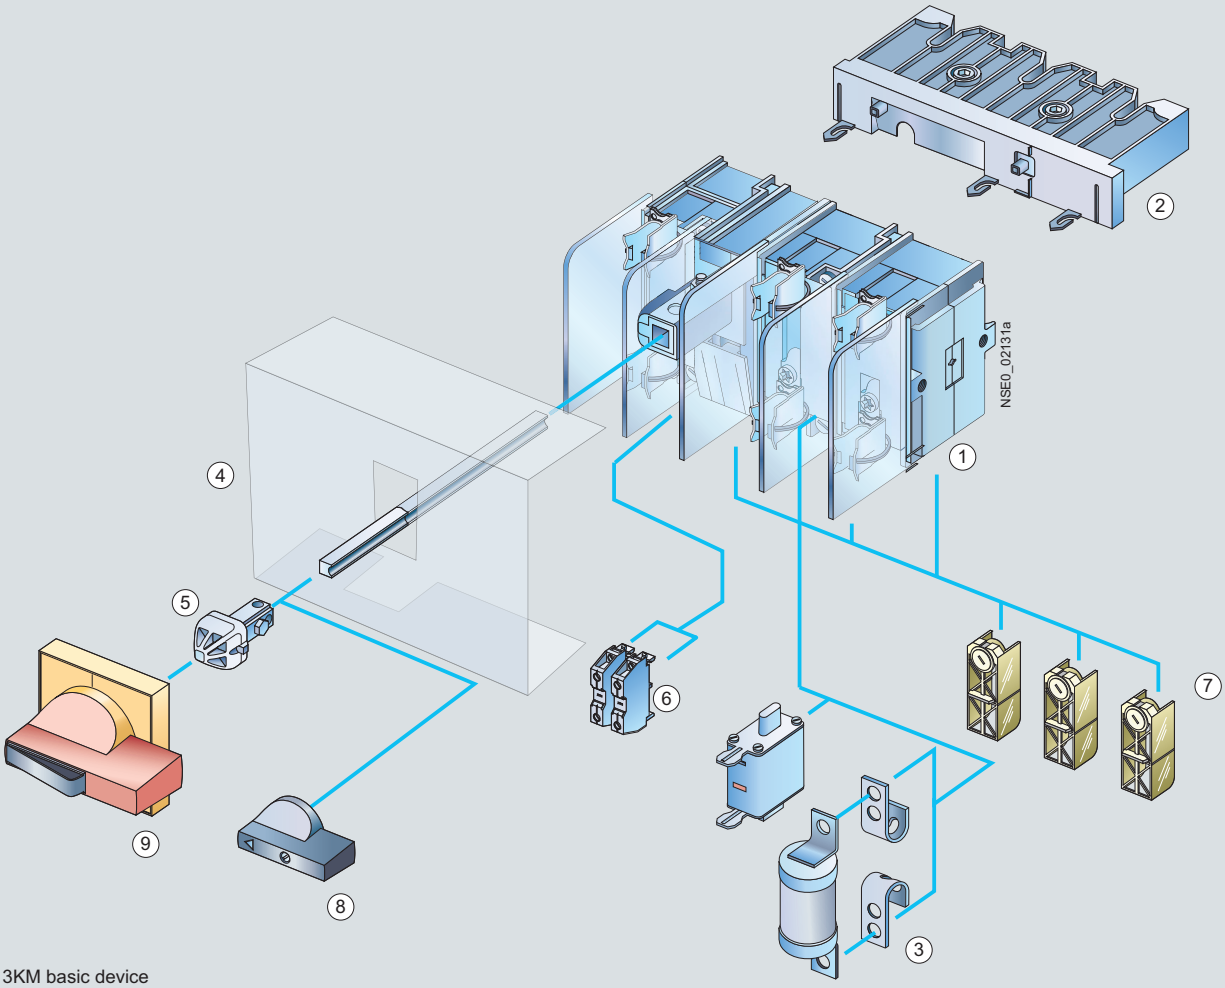
[4] Values in blue brackets apply to 3KM switch disconnectors.

For technical specifications and dimensional drawings of the SITOR fuses, see chapter 5 "Fuse Systems".

* You can order this quantity or a multiple thereof.

3KM Switch Disconnectors with Fuses and Isolating Plug Connector up to 400 A

Overview



1. 3KM basic device
2. Plug-in contact strip for 3KM (part of basic device)
3. Fuses, optionally BS-88 or LV HRC fuses
4. Terminal cover, IP20 (vertical to operator side)
5. Coupling driver with extension shaft
6. Standard products from the Siemens 3SB1 range are used as auxiliary switches.
7. Single-pole terminal cover from 63 A to 630 A, IP20 (vertical to operator side)

All components from the switch to the actuator are provided with non-interchangeability features.

Optional

8. 8UC9 knob for fixed mounting in standard version (black) or EMERGENCY-STOP version (red), or
9. 8UC7 door-coupling rotary operating mechanism in standard version (ti-grey) or EMERGENCY-STOP version (red/yellow)

All switch disconnectors feature double contact interruption and an isolating distance. As a result, the fuses are de-energized when the switch disconnectors are in the disconnected position.

The 3KM switch disconnectors with fuses also feature an isolating plug connector. This facilitates mounting and contact establishment in motor control centers (MCCs) in conjunction with vertical busbars. Generally, all 3K.5 switch disconnectors can be secured to the shaft with padlock against unauthorized reclosing.

Identical accessories for 3KA switch disconnectors and for 3KL and 3KM switch disconnectors with fuses simplify stock keeping. Please inquire about a special version with reduced values that is particularly resistant to atmospheres high in sulfur, e. g. in the paper and cellulose processing industries.

Application

3KM switch disconnectors with fuses protect against overload and short-circuits as main control and EMERGENCY-STOP switches of switchgear assemblies, distribution boards, power supply and motor outgoing feeders.
In conjunction with Siemens SITOR semiconductor fuses, they are also used in UPS systems, frequency converters and capacitor control systems.

All 3K switch disconnectors are climate-proof and meet the requirements of IEC 60947-1, IEC 60947-3 and VDE 0660 Part 107.

3KM Switch Disconnectors with Fuses and Isolating Plug Connector up to 400 A

Introduction

Cable lug, max. conductor cross-section (stranded)	mm^2	--	--	--	70	120

[1] Configuring note: Max. permissible operating temperature for fuse blades 135 °C, for connections 100 °C.

[2] 110 V (one conducting path).

[3] 220 V DC (L1 and L3 series-connected) or 110 V DC (one conducting path) at DC-23A.

[4] At 440 V L/R = 4 ms, at 220 V L/R = 15 ms.

[5] At 440 V DC-22A, at 220 V DC-23A.

[6] 3ND1 switchgear protection fuse.

3KM Switch Disconnectors with Fuses and Isolating Plug Connector up to 400 A

Selection and ordering data

All switch disconnectors with degree of protection IP00
Mounting on vertical busbars with busbar center-to-center spacing of 60 mm and bar thickness from 5 mm to 6.35 mm
Conductor connecting screws and fuse partitions are generally included in the scope of supply.

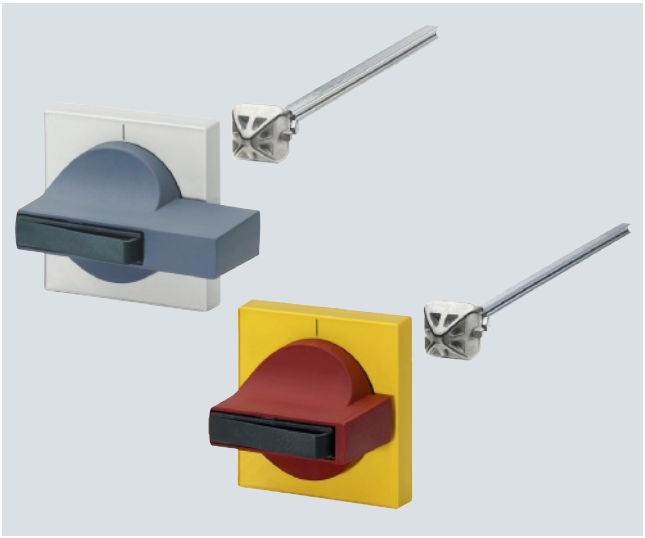
For 3K switch disconnectors

Overview



8UC7 rotary operating mechanism in STANDARD version (left) and EMERGENCY-STOP version (right)

With door-coupling rotary operating mechanisms it is also possible to operate switch disconnectors from the outside with the control cabinet doors closed.

The rotary operating mechanisms are available in "STANDARD" and "EMERGENCY-STOP" versions with the following differences:

- STANDARD version: Masking plates in light-gray with black inscription, handles in ti-grey
- EMERGENCY-STOP version: Masking plates in yellow with black inscription, handles in red

Available sizes

Rotary operating mechanisms	Size	Rated torque[1]	Shaft profile	Masking plate
		Nm	mm x mm	mm x mm
8UC71	1	4	6 x 6	75 x 75
8UC72	2	9	8 x 8	75 x 75
8UC73	3	25	10 x 10 or 12 x 12	100 x 100
8UC74	4	40/55[2]	12 x 12	100 x 100

[1] Operating mechanisms tested with triple torque (according to EN 60947-3). They are therefore also suitable for applications in this area.

[2] Operation with two hands.

Degree of protection

Degree of protection when installed is IP65.

Standards

8UC7 door-coupling rotary operating mechanisms are in line with for example the following standards:

Standard	Title
IEC 60204-1, EN 60204-1 (VDE 0113 Part 1)	Safety of machinery; electrical equipment of machines
IEC 60439-1, EN 60439-1 (VDE 0660 Part 500)	Low-voltage switchgear and controlgear assemblies
IEC 60947-3, EN 60947-3 (VDE 0660 Part 107)	Low-voltage switchgear and controlgear; Switches, disconnectors, switch disconnectors and fuse-combination units

Benefits

Can be locked

The retractable locking device integrated in the handles is suitable for padlocks with shackle diameters of 4.5 mm to 8.5 mm (locks according to DIN 7465).

Up to three padlocks with a shackle diameter of 8.5 mm and up to five padlocks with a shackle diameter of 6 mm can be fitted simultaneously.

Non-interchangeability

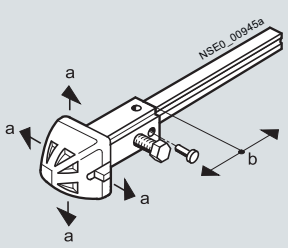
In order to ensure that, when installing switches and door-coupling operating mechanisms, all components are assembled in the correct position with respect to one another, the components are provided with non-interchangeability features (rivel and lug).

Stops

Stops are used to prevent damage occurring as the result of excessive torque. These stops are supplied loose with the rotary operating mechanisms and can be fitted as required. Stops are fitted at the factory to size 1 and 2 rotary operating mechanisms with a 90° operating angle (exception: 3RV motor starter protectors/circuit breakers).

Tolerance compensation

8UC7 rotary operating mechanisms are capable of taking up a radial eccentricity of max. 3 mm between the actuating shaft of the switching device and the door-coupling rotary operating mechanism. Supporting the extension shaft is recommended with greater tolerances.



Coupling drivers	a	b	Shaft length
With tolerance compensation	+3	±5	x
Without tolerance compensation	+1.5	±2.5	x+23.5

Permissible radial eccentricity and axial tolerance compensation in mm

Pull-out strength

The pull-out strength of interlocked operating mechanisms, e. g. pulling off the shaft or destruction of the operating mechanism, amounts to 800 N when the pulling force acts directly onto the operating mechanism in direction of shaft.

Application

8UC7 door-coupling rotary operating mechanisms can be used in electrical controls, distribution boards and switchgears in cases where switches have to be mounted behind covers, end plates and doors that must be opened and where they are to be operated manually from outside.

Interlocking conditions

The basic versions of the rotary operating mechanisms comply with the following interlocking conditions:

- Operating mechanism and switch in "0" (OFF) position: The control cabinet door can be opened. With padlocks fitted, the control cabinet door remains locked however.
- Operating mechanism and switch in "I" (ON) position: The control cabinet door cannot be opened in this position. However, the interlock can be overridden and the control cabinet door opened by trained personnel for performing checks. No padlocks can be fitted in "I" position.

Other interlocking conditions:

- If no door interlock is required, the user can remove the door interlocking plate of the rotary operating mechanism.
- It is easy for the user to fit padlocks to the rotary operating mechanisms in the "I" position as well. In this case, the door cannot be opened, the operating mechanism cannot be actuated and the door interlock cannot be overridden.

Operating conditions and ambient conditions

The temperature range for operation of the rotary operating mechanisms is between -25 °C and +60 °C.

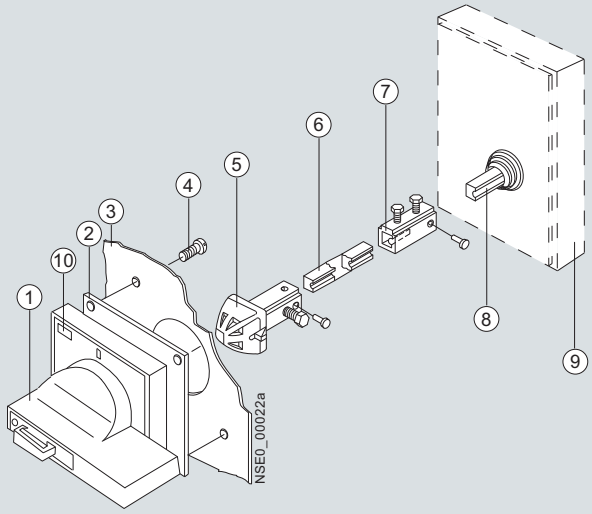
Thanks to the use of glass fiber-reinforced molded plastic for handles and masking plates as well as metal components with surface protection, the rotary operating mechanisms are suitable for rough conditions, high air humidity and aggressive atmospheres.

Design

Components

The rotary operating mechanisms consist of a masking plate with handle, including seal and fixing screws for door installation, an extension shaft (300 mm) and a coupling driver to be mounted onto the switch shaft.

Operating mechanisms for 3KA / 3KL / 3KM switch disconnectors do not have a shaft coupling since the extension shaft is fitted directly into the switch. Extension shafts with a length of 600 mm are also available.

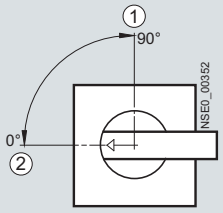


1 Handle with masking frame
2 Seal
3 Door
4 Fixing screws
5 Coupling driver
6 Extension shaft
7 Adapter
8 Operating shaft of switching device
9 Switching device
10 Tripped plate (can be glued on if required)

Design, schematic representation

Switch position

In order to ensure compliance with locking and interlocking conditions, the controls and operating mechanisms must be installed such that, with two-position switches the "0" position lies at 9 o'clock and the "I" position at 12 o'clock.



1 12 o'clock position
2 9 o'clock position

Positions for two-position switches with 90° operating angle

For 3K switch disconnectors

Selection and ordering data

3KE44 (2 units)	630	12 x 12	55	
3KE45 (2 units)	1000	12 x 12	55	

[1] Valid only for 3-pole switching devices. For 4-pole switching devices, an operating mechanism with 8 x 8 mm actuating shaft must be used, see lower level for 3KA52, 3KL52 or 3KM52.

[2] Additionally required for 3KL61: 1 shaft coupling, order no. 8UC92 53, see individual parts, table at page 7/84.

[3] The door interlocking plate must be removed.

[4] With shortened 8UC60 16/8UC60 17 coupling driver and reduced tolerance compensation, see "Dimensional Drawings".

1) Non-interchangeability features.

2) Shortened coupling driver with reduced tolerance compensation.

3) For switch disconnectors as changeover switches in various versions, see table on page 7/82.

4) Standard: Ti-grey handle, light-gray masking plate; EMERGENCY-STOP: Red handle, yellow masking plate.

* You can order this quantity or a multiple thereof.

1) Operating mechanisms were tested with triple torque (DIN VDE 0660 Part 107). They are therefore qualified for use in all controls, especially for disconnectors.

2) Red handle available on request.

3) Also required: 3KX2 210-0H coupling socket.

3NJ62 In-Line Switch Disconnectors with Fuses up to 630 A

Introduction

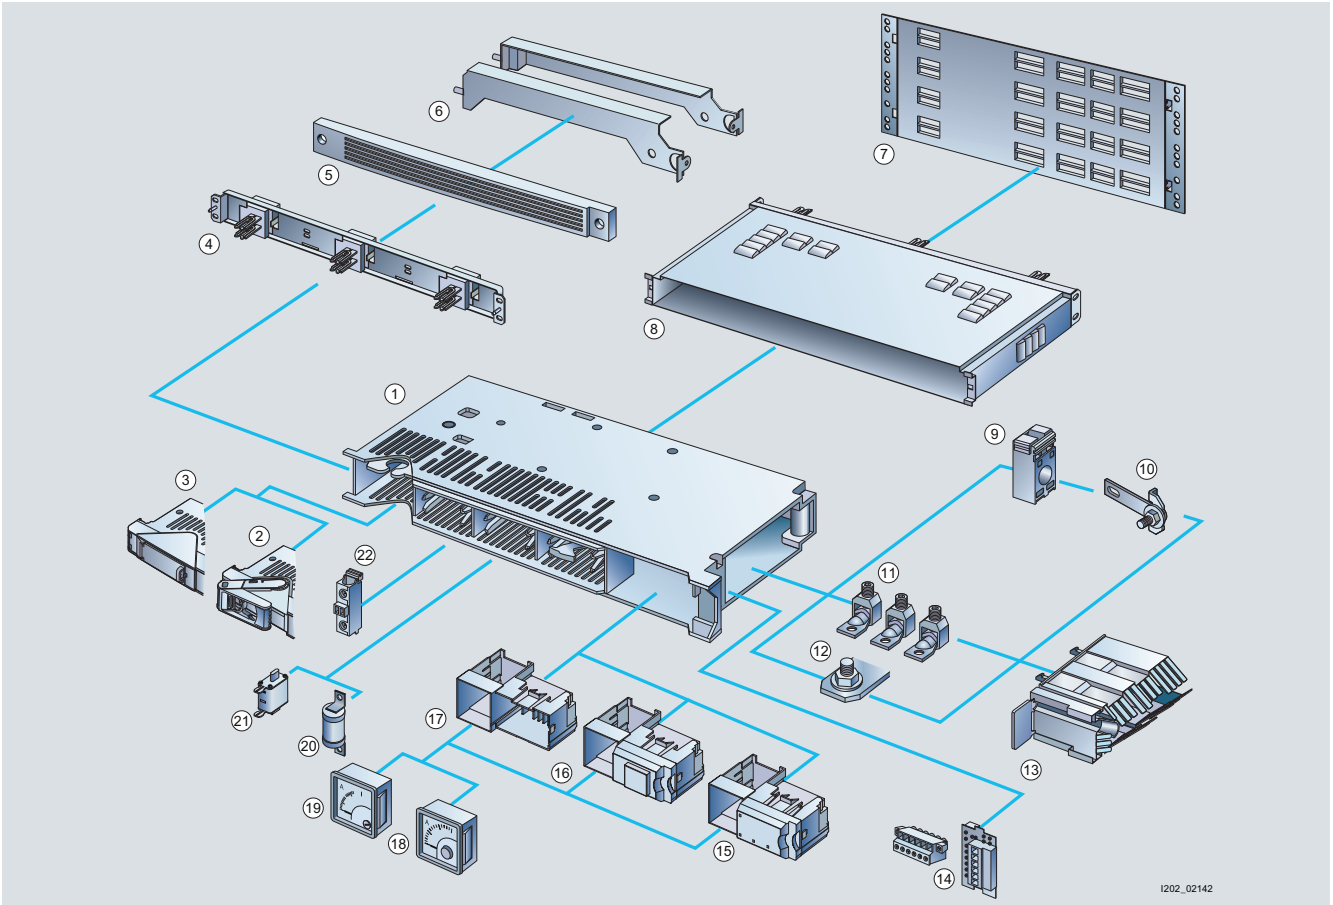
Overview

3NJ62 Switch Disconnectors with Fuses

All key product features at a glance

- In-line design
- Type-tested according to IEC EN 60947-3
- Voltage levels up to 690 V AC/440 V DC
- 160 A to 630 A for LV HRC and BS 88 fuse links, according to IEC 60269-1/EN 60269-1
- 2-, 3- and 4-pole versions available
- 185 mm phase center distance of plug-in contacts
- Manually operated or with motorized operating mechanism
- Electronic fuse monitoring (EFM)
- Developed for switchgears in plug-in design
- Horizontal or vertical mounting position
- Front panel locked in ON position
- Degree of protection IP41

Overview of components and accessory parts



1. 3NJ62 switch disconnector basic device here in size 00, open, without front cover
2. Hand drive
3. Motor drive
4. Connection module
5. Blanking cover
6. Guide rails
7. Busbar cover
8. Contact extension
9. Current transformer
10. Current transformer bar
11. Connection terminals
12. Stud terminal
13. Terminal cover
14. Multifunction plug
15. Holder for measuring device with electronic fuse monotoring (EFM10)
16. Holder for measuring device with electronic fuse monotoring (EFM20/25)
17. Holder for measuring device without EFM
18. Bimetal current measuring device
19. Moving-iron current measuring device
20. BS fuse
21. LV MRC fuse
22. Auxiliary switch

Benefits

Key advantages for switchgear manufacturers due to the following:

- Compact, modular design
- Simple and efficient mounting due to incoming plug-in contact
- High packing density in the field
- Cable connection with cable clamps or cable lugs
- Can be mounted in different control cabinet depths
- Comprehensive range of accessories.

The advantages for users are:

- Conversion, retrofitting and replacement without switching off the switchgear
- Dead-state fuse replacement
- Maintenance free
- High personal safety
- Operating handle can be locked in OFF position
- Clear and unambiguous switch position indicator

Application

The plug-in 3NJ6 switch disconnectors with fuses are installed in low-voltage distribution boards where a minimum amount of space is available for a maximum number of cable ducts to the power distribution. They can be easily fitted in all common control cabinets (minimum depth: 400 mm).

The plug-in 3NJ62 switch disconnectors with fuses are available for rated uninterrupted currents from 160 A to 630 A.

LV HRC fuse links according to IEC 60269-1/EN 60269-1 (sizes NH 00 to NH 3) or BS fuse links according to BS 88 provide overload and short-circuit protection up to 690 V AC.

The switch disconnectors can be retrofitted at any time with auxiliary switches, an ammeter (48 mm x 48 mm) and current transformers, with no extra space required. For installation in control cabinets of > 400 mm depth, the mounting depth of the disconnectors can be increased by 200 mm using a contact extension. Further installation accessories, such as guide rails and blanking covers, complete the product range.

Function

Fuse monitoring

Fuse monitoring is used to detect, indicate and report faults. The electronic fuse monitors are available in 2 versions.

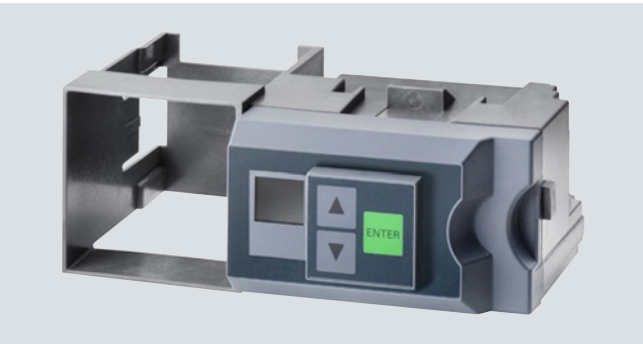
EFM10 electronic fuse monitor:

- For use up to 690 V AC
- Operational voltage < 20 V
- Display: ready-to-run
- Individual fault display per phase
- 1 CO contact as centralized fault signaling unit

EFM20/25 electronic fuse monitor and line monitor:

- EFM20 for use up to 690 V AC, EFM25 for use up to 440 V DC
- Operational voltage < 13 V (EFM20) < 20 V (EFM25)
- Test function
- Closed-circuit principle or open-circuit principle
- 2 CO contacts as centralized fault signaling unit incl. line monitoring functions with phase failure detection (EFM20), undervoltage/overvoltage detection

EFM10 electronic fuse monitor



EFM20/25 electronic fuse monitor

Storage temperature **Operating temperature** **Operating temperature (500 V and/or 500 A)**	°C °C °C	- 20 ... + 80 - 5 ... + 55 - 5 ... + 35		
Protection rating in closed in-line connector		IP40		
Rated operating voltage of the main control switching devices	V DC	220 ... 440		
Voltage limits	%	±15		
Undervoltage **Overvoltage**	V V	200 240		
Voltage drop for faulty fuses	V	> 20		
Delay time	s	0.1		
Relay 2		As relay 1 (fuse monitor)		
Storage function		Off		
Open/closed-circuit principle		Closed-circuit principle		
Mode		Run mode		
Menu option		Display of voltage values/ signals		
Signaling relay acc. to IEC 60947-5-1	A kV V	I_{th} = 1.5 U_{imp} = 4 U_i = 250		
Signaling relay 1 **Signaling relay 2**		1 changeover for fuse monitoring 1 changeover as output for central fault OR as signaling relay 1 (presetting)		
Load capacity of the signaling relay				
• U_e	V	24	125	240
• DC-13; I_e	A	1	0.2	0.1
• AC-15; I_e	A	1.5		
Short-circuit protection		Max. fuse protection Diazed 2 A gLgG		

Ammeters

Inputs		x/1 A or x/5 A
Overload		
• Moving-iron measuring instruments		1.2 times
• Bi-metal measuring instruments		2 times
Slave pointer		
• Moving-iron measuring instruments	min	--
• Bi-metal measuring instruments	min	15
Power consumption		
• Moving-iron measuring instruments	VA	0.6
• Bi-metal measuring instruments	VA	1

Motorized operating mechanism

Size		Size 00	Size 1	Size 2 / Size 3
Control supply voltage	V DC	24 ± 2		
Power consumption	A	1.1	1.3	2.8
Service life (no limitation of circuit breaker acc. to IEC 60947-3)				
Operating cycles total		1600		
Switch cycles under load		200		
Signal duration	s	min. 0.5 or continuous signal

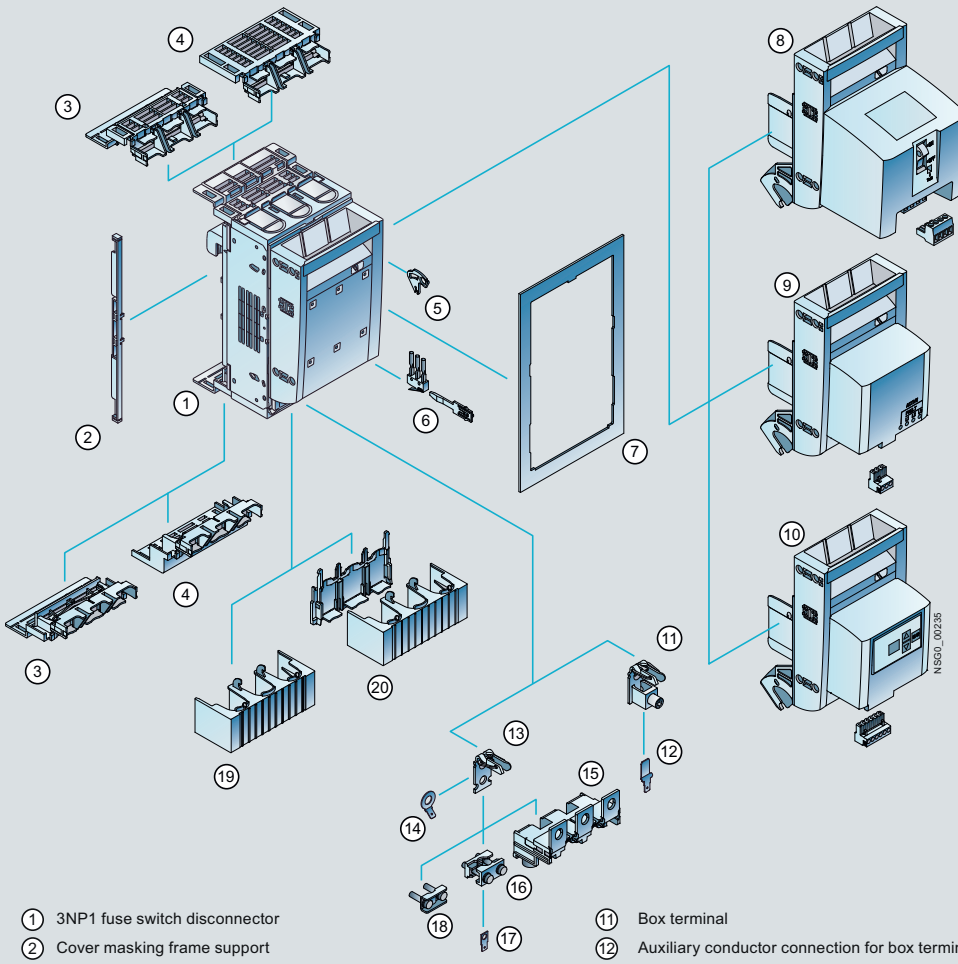
Overview

3NP1 fuse switch disconnectors

All key product features at a glance

- Box terminals available for all sizes
- Connection of circular conductors and laminated conductors
- Fuse monitoring possible throughout
- Busbar supports can be built over
- Conversion of 5 /10 mm thick busbars without parts which can be lost or broken off
- Convertibility of cable feeder at top/bottom without intervention in the internal conducting paths
- Optimum integration in various system environments through cover levels and on busbar systems with/without base
- Touch protection also with rear incoming feeder
- Fuses are removed using a release shaft without the fuses being touched
- All units can be sealed and locked

Overview of components and accessory parts



1 3NP1 fuse switch disconnector
2 Cover masking frame support
3 Reach-around protection for Siemens busbar system
4 Reach-around protection for Rittal busbar system
5 Locking device
6 Auxiliary switch with actuator
7 Molded-plastic masking frame
8 Fuse carrier with MFM electromechanical fuse monitoring
9 Fuse carrier with EFM 10 electronic fuse monitoring
10 Fuse carrier with EFM 20/25 electronic fuse monitoring
11 Box terminal
12 Auxiliary conductor connection for box terminal
13 Flat connector
14 Auxiliary conductor connection for flat connector
15 Deep-drawn connection module
16 Prism terminal
17 Auxiliary conductor connection for prism terminal
18 Saddle terminal
19 Cable connection cover
20 Cable connection cover with rear reach-around protection

Introduction

Benefits

Advantages during planning and configuration

- Low level of equipment variation due to easy convertibility of cable feeder at top/bottom (delivered from factory with cable feeder at bottom)
- Only one device version for applications in industry and infrastructure thanks to touch and reach-around protection as a standard feature
- Uniform grid sizes for easy configuration

Advantages during operation and service

- The optional rear covers for the cable connections guarantee optimum touch protection even for switchgear assemblies with rear access.
- Innovative design enables the highest safety for equipment and personnel.
- Fuses can be released and removed using a release shaft.
- Lockable and sealable design enables safe working and prevents unauthorized access.

Advantages during installation

- Only one device version is required for cable feeders at top/bottom and there is no need to intervene in the internal conducting paths.
- One device version with very high short-circuit values dispenses without having to order and install arc splitters to increase the electrical values.
- On all sizes it is possible to install two CO contacts for indicating the switching position.
- All devices feature all-round touch protection.
- Box terminals are available for all sizes and shorten the mounting time appreciably.
- Snapping on the sizes NH000 and NH00 shortens the mounting time greatly compared to fixing with screws.
- The screw-fixing method on sizes NH1, NH2 and NH3 provides for easy positioning and at the same time secure contacting of the larger and heavier device versions.
- Small space requirement through compact devices and busbar supports which can be built over
- Device versions for busbar mounting can be converted to 5 mm or 10 mm thick busbars without parts which can be lost or broken off.

Application

Possible uses

3NP1 fuse switch disconnectors can be used for protecting and switching the most diverse electrical loads:

- Motor starter combinations
- In conjunction with SITOR fuses for the protection of frequency converters and soft starters
- Fusing of compensation modules
- Cable feeders
- Group fusing of small loads

The devices are optimized for operation in all kinds of system environments:

- Low-voltage switchgear assemblies for power distribution and MCCs (e. g. main and sub-distribution boards)
- Distribution systems with cover levels of 32 and 70 mm or 45 and 70 mm
- Mechanical engineering
- Railway applications

Fuse monitors are used to detect, indicate and report faults:

- MFM – electromechanical fuse monitoring for AC/DC networks
- EFM 10 – electronic fuse monitoring for AC networks
- EFM 20 – electronic fuse monitoring with line monitoring for AC networks
- EFM 25 – electronic fuse monitoring with line monitoring for DC networks

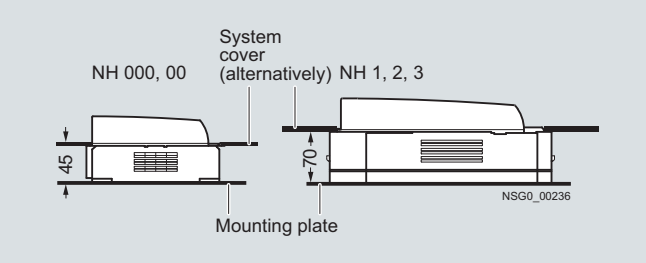
Standards and specifications

The 3NP1 fuse switch disconnectors are compliant with:

- IEC 60947-1, EN 60947-1
- IEC 60947-3, EN 60947-3

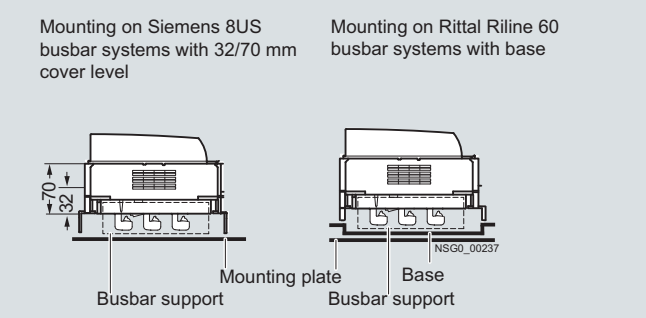
Mounting

Floor mounting



3NP1 fuse switch disconnector for floor mounting

Busbar mounting



3NP1 fuse switch disconnector for busbar mounting

3NP1 Fuse Switch Disconnectors up to 630 A

For 60 mm busbar system

Selection and ordering data

	Rated current I_u	NH-type LV HRC fuse links according to IEC 60269-1	DT	Order No.	Price per PU	PU (UNIT, SET, M)	PS*/ P. unit	PG	Weight per PU approx.
	A	Size							kg
For cover level 32/70 mm, with reach-around protection for Siemens 8US busbar system and Rittal Riline60 system without base for busbar width 12 to 30 mm and thickness 5 mm or 10 mm									
	Basic units								
	Flat terminals								
	160	00 / 000	A	**3NP1 133-1BC10**		1	1 unit	143	0.980

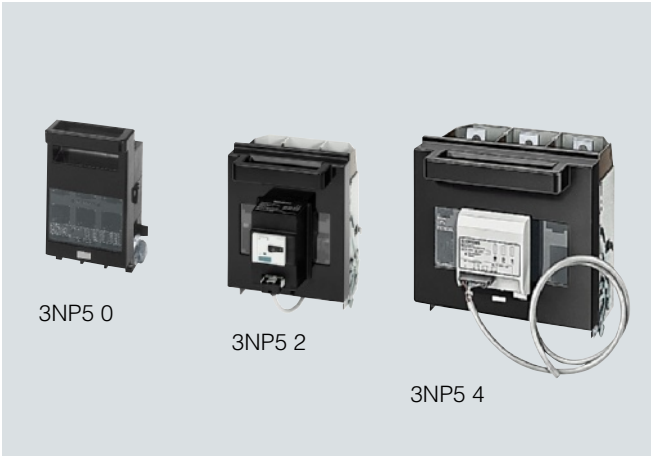
3NP5 Fuse Switch Disconnectors up to 630 A

Introduction

Overview



3NP5 fuse switch disconnector range

3NP5 fuse switch disconnectors are controls for the occasional manual switching/isolating of loads and distribution boards. They are able to switch on, control and switch off the specified rated current (including a specific overload).

With the 3NP5 fuse switch disconnectors, all poles of downstream electric loads can be safely disconnected from the system under load.

Application

The 3NP5 fuse switch disconnectors are ideally suited for surface mounting and installation in distribution boards (e. g. ALPHA, SIKUS), meter cabinets (e.g. ALPHA 400-ZS), and molded-plastic distribution systems such as 8HP.

The ability to mount them on a range of different busbar systems allows their very diverse implementation in switchgear cabinet and control engineering.

The 3NP5 fuse switch disconnectors are ideal for operation in combination with other switching devices, for example in capacitor modules for reactive-power compensation.

In conjunction with semiconductor protection fuses (e. g. SITOR), these are used for the effective protection of frequency converters and soft starters.

The 3NP5 fuse switch disconnectors are suitable for use in any climate and comply with standards IEC 60947-1, IEC 60947-3 and DIN VDE 0660 Part 107.

In addition, the 3NP5 series of fuse switch disconnectors complies with the requirements of BS 5419 and is also approved for operation in marine applications.

All 3NP5 fuse switch disconnectors can be sealed as standard or can be sealed through accessories.

Technical specifications

Standards		**IEC 60947-1, IEC 60947-3, VDE 0660 Part 107**						
Type		**3NP50**	**3NP52**		**3NP53**		**3NP54**	
Rated uninterrupted current I_u	A	160	250		400		630	
For fuse links acc. to IEC 60269-1	Size	00	1 and 0		2 and 1		3 and 2	
Conventional free air thermal current I_{th}	A	160	250		400		630	
Rated operational voltage U_e								
50/60 Hz AC	V	690						
DC	V	440 (3 conducting paths series-connected), 220 (2 conducting paths series-connected and with fuse monitoring through 3RV)						
Rated insulation voltage U_i	V	690[1)]	690[1)]		690[1)]		690[1)]	
Rated impulse withstand voltage U_{imp}	kV	6	6		6		6	
Rated conditional short-circuit current with fuses (by fast switch on)								
With fuse links								
Rated current	Size/A	00/160	1/250		2/400		3/630	
At 500 V AC (rms value)	kA	50	50		50		50	
Permissible let-through current of the fuses (peak value)	kA	15	25		40		50	
Short-circuit strength with fuses (with closed disconnector)								
With fuse links								
Rated current	Size/A	00/160	1/250		2/400		3/630	
At 500 V AC (rms value)	kA	100	100		50		50	
Maximum permissible let-through I^2t value	kA^2s	223	780		2150		5400	
Permissible let-through current of the fuses (peak value)	kA	23	32		40		60	
Rated short-circuit making capacity with isolating blades[2)]	Size	00	1		2		3	
At 500 V AC (peak value)	kA	6	17		17		17	
Rated making and breaking capacity[2)] (infeed from top or bottom)[3)]								
Size		00	1	0	2	1	3	2
Breaking current I_c (p.f. φ = 0.35) at 400 V AC, with fuse links, rms value,	A	1600	2500	1600	4000	2500	5040	4000
Rated operational current I_e at AC-21B, AC-22B, AC-23B at 500 V AC, with fuse links	A	160	250	160	400	250	630	400
Breaking current I_c (p.f. = 0.35) (rms. value)	A	1300	2500	1600	4000	2500	5040	4000
Rated operational current I_e at AC-21B, AC-22B, AC-23B at 690 V AC, with fuse links	A	160	250	160	400	250	630	400
Breaking current I_c (p.f. = 0.35) (rms. value)	A	800	1280	1000	2520	1600	3200	2520
Rated operational current I_e at AC-21B, AC-22B	A	160	250	160	400	250	630	400
Rated operational current I_e at AC-23B	A	100	160	125	315	200	400	315
At 220 (440) V DC, with 2 (3) conducting paths series-connected and fuse links:								
• Breaking current I_c (L/R = 15 ms)	A	640	1000	640	1600	1600	2520	1600
• Rated operational current I_e for DC-23B	A	160	250	160	250	250	630	400
Capacitor switching capacity								
Capacitor rating at 400 V AC	kvar	80	90		150		250	
Rated current I_n at 525 V AC	A	116	130		216		361	
Capacitor rating	kvar	100	125		200		300	
Rated current I_n	A	110	137		220		330	
Permissible ambient temperature	°C	-25 ... +55 for operation[4)], -50 ... +80 during storage						
Mechanical endurance, operating cycles		1600						
Degree of protection								
Without molded-plastic masking frame		IP00[5)]						
With molded-plastic masking frame with closed fuse carrier on the operator side		IP30						
With molded-plastic masking frame with open fuse carrier		IP10						
Power loss of the switch at I_{th} (without power loss of fuse links)								
Without busbar adapter	W	7.8 (16.3)[6)]	7.5		15		39	
Main conductor connections								
Cable lug, max. conductor cross-section (stranded)	mm^2	2.5 ... 120	6 ... 150		6 ... 240		6 ... 2 × 240	
Busbars	mm	16 ... 22	22 ... 30		22 ... 30		22 ... 30	
Clamp terminals	mm^2	2.5 ... 50	35 ... 120		--		--	
Auxiliary switch 1 NO + 1 NC (accessories)								
(the same voltage potential must be applied to both NO and NC contact)								
At 50 Hz/60 Hz to 400 V AC, rated operational current I_e at AC-12/AC-15 A	A	16/6						
Flat plug-in terminals (DIN 46244)		A 6.3 ... 0.8						
Permissible mounting positions		vertical or horizontal installation (switching capacity is sometimes reduced with horizontal installation)						
Signaling contact for solid-state fuse monitoring		2 NO + 1 NC						
Rated operational current I_e								
At 250 V, DC-13	A	0.27						
At 240 V, AC-15	A	1.5						
Thermal free-air rated current I_{th}	A	5						

1) When observing degree of pollution 2 (instead of 3) operation is also possible up to U_i = 1000 V.

2) Rated making and breaking current according to IEC 60947-3:
Rated making current
I = 10 × I_e (AC-23); 3 × I_e (AC-22); 1.5 × I_e (AC-21)
Rated breaking current
I_e = 8 × I_e (AC-23); 3 × I_e (AC-22); 1.5 × I_e (AC-21).

3) When electronic fuse monitors are used, infeed must be from the top.

4) When using isolating links. If using fuse links, please observe specifications of fuse manufacturer.

5) For 3NP52 with clamp terminal, degree of protection IP10.

6) With busbar adapter.

1) LV HRC fuse links see chapter 5 "Fuse Systems".

2) For 3NP50 60 with flat connectors, appropriate 3NY1 106 cable lug covers must be used to provide finger-safe cover, according to DIN VDE 0106 Part 100 (see Accessories).

3) According to DIN 46234 or 16 ... 95 mm² according to DIN 46235 (use M10 cable lug if necessary).

4) According to DIN 46234 or DIN 46235, with cable lug to DIN 46235: Min. conductor cross-section 16 mm² (use M12 cable lug if necessary).

7

3NP5 Fuse Switch Disconnectors up to 630 A

With fuse monitoring

For 40 mm busbar system

Rated uninterrupted current I_u	Connection types (on both sides)		For LV HRC fuse links acc. to DIN 43620[1]	Auxiliary switches		DT	**Degree of protection IP00, without fuse links, without isolating links, with terminal screws**		PU (UNIT, SET, M)	PS*/ P. unit	PG	Weight per PU approx.
	Connection	For conductor cross-section		At switch disconnectors	At circuit breakers		Order No.	Price per PU				
A		mm²	Size	Version	Version							kg
Completely compartmentalized, with high speed closing features with fuse monitoring by SIRIUS circuit breakers[2]												
Busbars with a width of 12 mm and thickness of 5 mm or 10 mm

[1] In the case of cyclic loads, the currents may have to be reduced again (precise values on request).

[2] When maintaining overvoltage category 2 (instead of 3) and degree of pollution 2 (instead of 3) to EN 60 947-1, the rated insulation voltage of the 3NP fuse switch disconnector is also U_i = 1000 V.

[3] Due to the mechanical stress on the relatively long fuse blades, SITOR 3NE41 fuses should be switchable only occasionally and only at zero current.

* You can order this quantity or a multiple thereof.

1) In the case of cyclic loads, the currents may have to be reduced again (precise values on request).

2) When maintaining overvoltage category 2 (instead of 3) and degree of pollution 2 (instead of 3) to EN 60 947-1, the rated insulation voltage of the 3NP fuse switch disconnector is also U_i = 1000 V.

3) Due to the mechanical stress on the relatively long fuse blades, SITOR 3NE41 fuses should be switchable only occasionally and only at zero current.

For technical specifications and dimensional drawings of the SITOR fuses see chapter 5 "Fuse Systems".

[1] Also available in 2-wire version: 1 × 2.5 mm^2 ... 50 mm^2 and 1 × 2.5 ... 35 mm^2.

[2] Disconnector is wider than adapter. The adapter can, however, be expanded to 276 mm with two 8US19 98-2BM00 side modules.

* You can order this quantity or a multiple thereof.

Overview

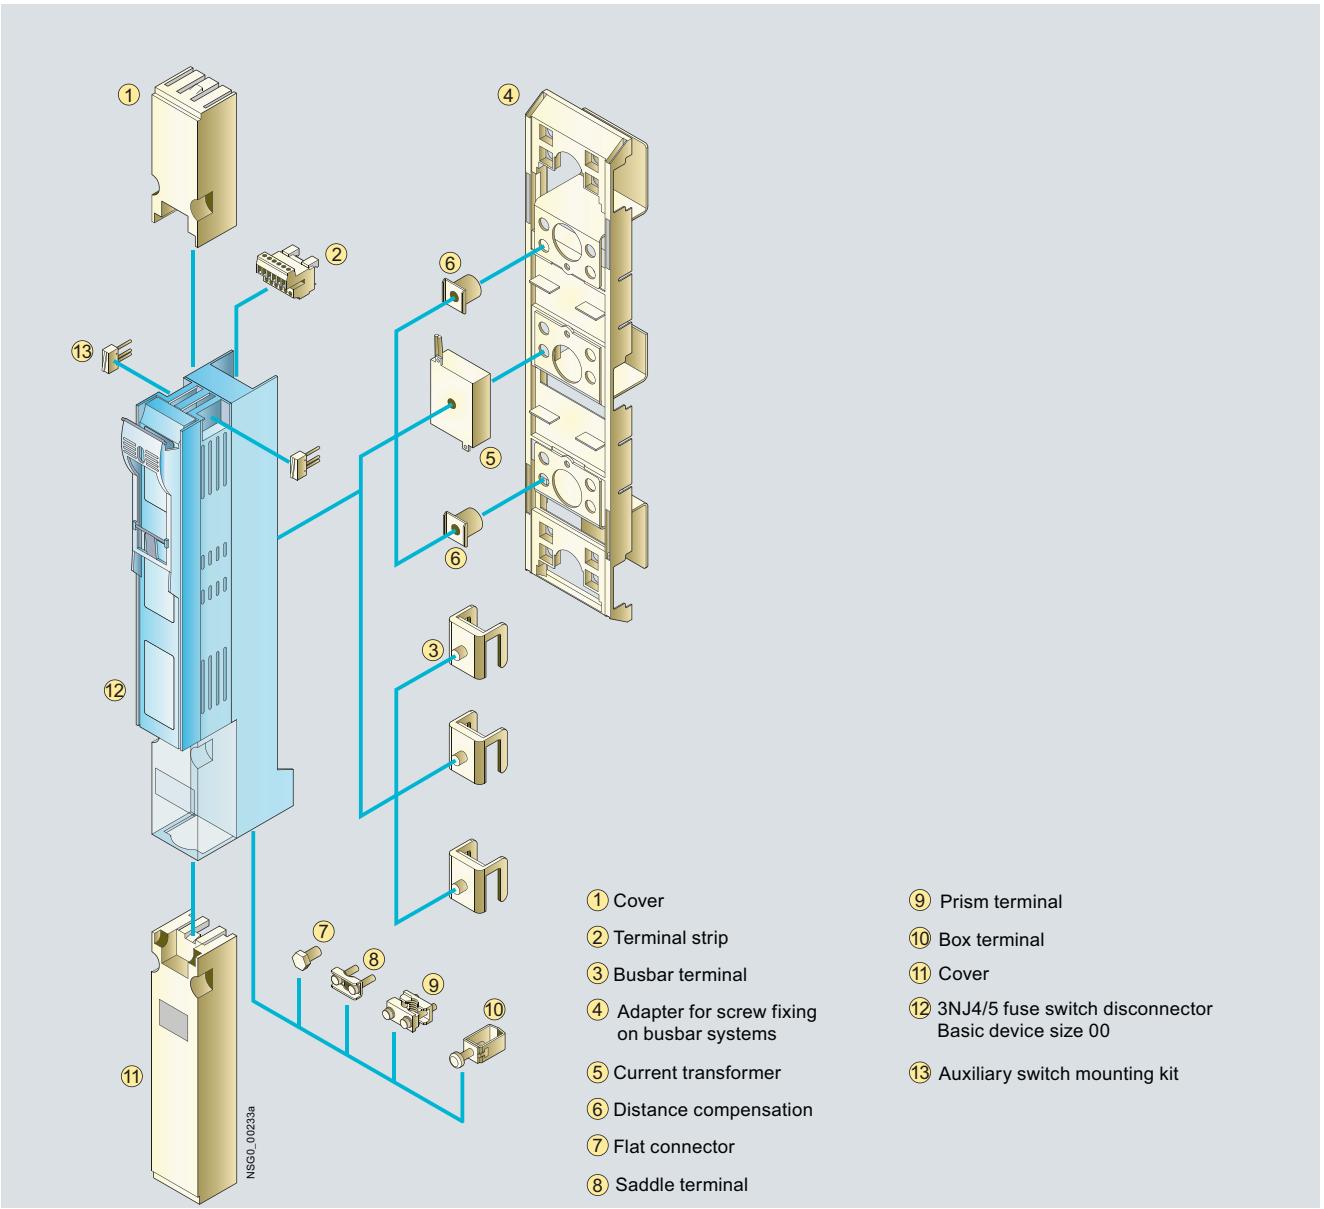
3NJ4/3NJ5 fuse switch disconnectors

All key product features at a glance

- Compliant with IEC/EN 60439-1, IEC/EN 60947-3
- Voltage levels up to 690 V AC
- Rated operational current from 160 A to 2000 A
- Fuse links according to IEC 60269 Part 1 can be used – nickel-plated fuse blades are not permissible due to the high transfer resistance
- In open position safe from touch by the back of the hand (exception 3NJ56: IP00)
- Parking position for maintenance
- 1-pole or 3-pole switchable
- Vertical and horizontal mounting position
- Climate-proof
- Degree of protection IP30 with closed fuse carriers, IP10 with open fuse carriers (exception 3NJ56: IP00)

7

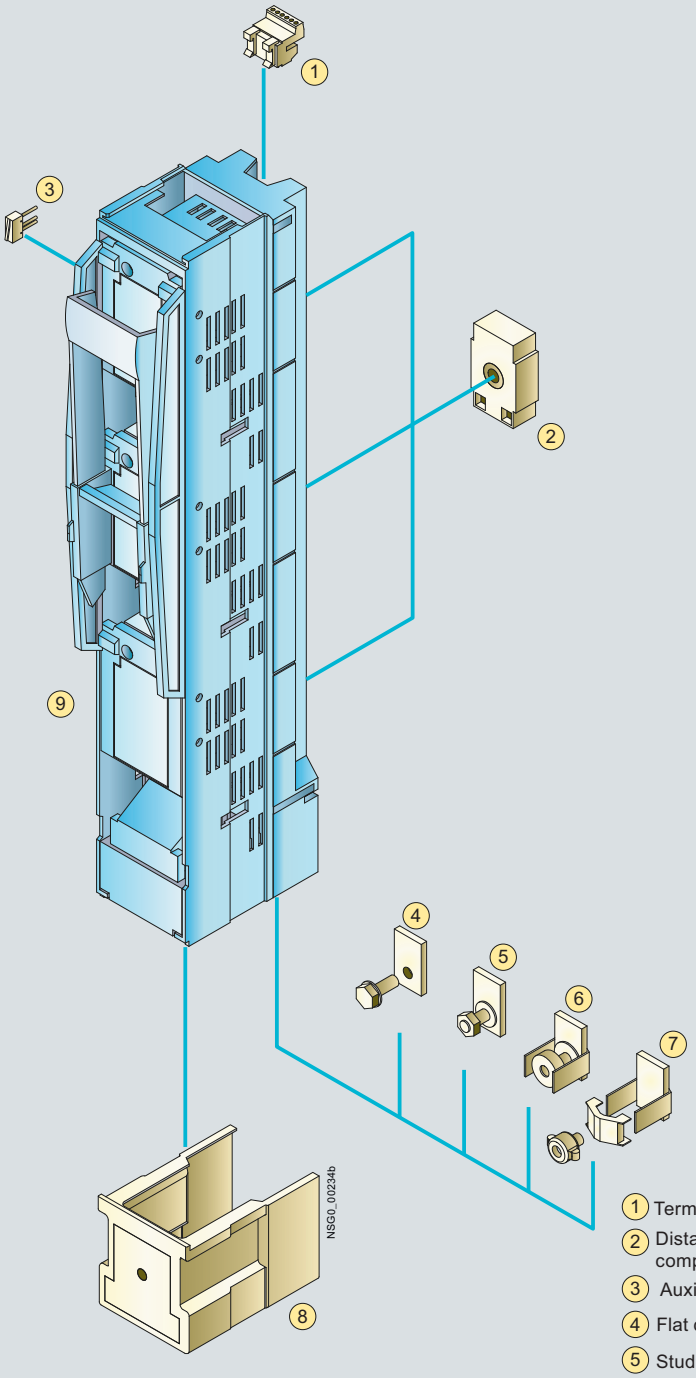
Overview of all components and accessory parts: 3NJ4/3NJ5 in size 00



3NJ4, 3NJ5 In-Line Fuse Switch Disconnectors up to 2000 A

Introduction

Overview of all components and accessory parts: 3NJ4/3NJ5 in sizes 1 to 3



1 Terminal strip
2 Distance compensation
3 Auxiliary switch
4 Flat connector
5 Stud terminal
6 V terminal
7 Box terminal
8 Cover
9 3NJ4/5 fuse switch disconnector Basic device size 1/2/3

Benefits

Parking position

For maintenance e. g. the fuse carriers of the 1-pole switchable in-line fuse switch disconnectors of sizes 1 to 3 and the 3-pole switchable in-line fuse switch disconnectors of size 00 can be mounted after being turned by 180° (fuse facing outwards).

This results in the following advantages:
- Visible disconnection point
- Depot for fuse links (parking position)
- No opportunity for mistakes on replacing the fuse links
- Additional touch protection in the vicinity of the lyre-shaped contacts

Application

3NJ41 and 3NJ56 single-pole and 3-pole in-line fuse switch disconnectors are designed for installation in low-voltage distribution boards, substations and cable distribution cubicles.

	Cover Size 00 Additional touch protection with use of cable lugs	3NJ50 33, 3NJ5013	B	**3NJ49 12-1FA02**		1	1 unit	143	0.090
 33NJ49 12-1AA01	**Cover**[1] Size 1 to 3 Additional touch protection with use of cable lugs or connection from above	3NJ41 2 to 3NJ41 4, 3NJ41 5, 3NJ41 8	P	**3NJ49 12-1AA01**		1	1 unit	143	0.103
 3NJ49 12-1EA00	**Covers** size 3 For double bars	3NJ41 4	A	**3NJ49 12-1EA00**		1	1 unit	143	0.200
 3NJ49 12-1DA02	**Cover** size 00 (can also be used as **spacer**) top and bottom to cover long cable lugs and compensate for combination of 3NJ41 03 with terminals 3NJ41 2 to 3NJ41 4 (1 set = 2 units: short and long[2])	3NJ41 03	A	**3NJ49 12-1DA02**		1	1 unit	143	0.005
 3NJ49 12-2AA01	**Blanking covers** For panel cut-out	50 mm wide	A	**3NJ49 12-2AA00**		1	1 unit	143	0.189
 3NJ49 12-2BA00	According to the size of the switch disconnectors: sizes 1 to 3 (for fitting in the cutout of the control panels)	100 mm wide	A	**3NJ49 12-2BA00**		1	1 unit	143	0.215
 3NJ49 12-2CA01	For 3NJ41 03	50 mm wide	A	**3NJ49 12-2CA00**		1	1 unit	143	0.090
 3NJ49 18-0AAA00	**Fixing clips** 2 units per side, for fixing the cover of the control panel front (1 set = 4 units, including fixing accessories)	3NJ41	A	**3NJ49 18-0AA00**		1	1 unit	143	0.130

[1] With cable lugs and connection from above, the terminal cover can be extended by connecting two units together.

[2] Can be shortened by „Cancel“ (in exchange for short cover, included in the scope of supply of the in-line disconnector).

* You can order this quantity or a multiple thereof.

	Version	For in-line fuse switch disconnectors/dimensions	DT	Order No.	Price per PU	PU (UNIT, SET, M)	PS*/ P. unit	PG	Weight per PU approx. kg
 ① ② ③	**Unequipped section cover for busbars** To be fitted directly in the drilled holes of the busbars		A						
	① Busbar center-to-center spacing 185 mm	50 mm wide	A	**3NJ49 12-3AA00**		1	1 unit	143	0.148
	② Busbar center-to-center spacing 185 mm	100 mm wide	A	**3NJ49 12-3BA01**		1	1 unit	143	0.372
	③ Busbar center-to-center spacing 100 mm	50 mm wide	A	**3NJ49 12-3CA00**		1	1 unit	143	0.105
	Also for covering a blank space on 3NJ49 18-0DA02 or 3NJ59 30–3BB								
 3NJ49 18-0DA02	**Adapters for screw fixing on busbar systems**								
	• For fitting of two 3NJ41 03 fuse switch disconnectors (= 1 holder) onto a busbar system with 185 mm center-to-center spacing (including adaptation of the installation depth to that of the 3NJ41 2 to 3NJ41 4 fuse switch disconnectors)	3NJ41 03	A	**3NJ49 18-0DA02**		1	1 unit	143	0.751
	• For fitting two 3NJ50 fuse switch disconnectors (= 1 holder) to adapt the overall depth of sizes 1 to 3	3NJ50 13 and 3NJ50 33	D	**3NJ59 30-3BB**		1	1 unit	143	0.675
	• For fitting one 3NJ41 03 fuse switch disconnector (= 3 separate brackets) onto a busbar system with 60 mm center-to-center spacing	3NJ41 03	A	**3NJ49 18-0EA00**		1	1 unit	143	0.232
 3NJ49 18-0EA00	**Adapters with busbar terminals** For fitting two 3NJ41 03 fuse switch disconnectors (= 1 holder) onto a busbar system with 185 mm center-to-center spacing (including adaptation of the overall depth to the 3NJ41 2 to 3NJ41 4 fuse switch disconnectors)	3NJ41 03	D	**3NJ49 18-0DB02**		1	1 unit	143	0.751
	Fixing screws for fitting 3NJ41 03 switch disconnectors with integratable current transformers onto adapters (1 set = 3 units)	3NJ41 03	B	**3NJ49 18-0DC02**		1	1 unit	143	0.200
 3NJ59 74-0AB	**Busbar supports** For 100 mm and 185 mm center-to-center spacing, for screwing on of busbars	3NJ41 and 3NJ5	P	**3NJ59 74-0AB**		1	1 unit	143	0.463
 3NJ49 10-1AA00	**Grounding kit with connecting cable 25 mm²**	3NJ41 4 to 3NJ41 8	D	**3NJ49 10-1AA00**		1	1 unit	143	4.200
 3NJ49 11-3AA00	**Busbar terminals**	3NJ41 03	P	**3NJ49 11-3AA00**		1	1 unit	143	0.176
 3NJ49 11-3BA01	For rapid mounting of the in-line disconnectors onto the busbars (1 set = 3 units)	3NJ41 2 to 3NJ41 4	P	**3NJ49 11-3BA01**		1	1 unit	143	0.607

	**7LF6 timers for buildings**	8/45	Lighting controls with stairwell lighting timers ensure the safe use of stairwells and save energy. Expanded applications for common rooms and garages, as well as the time switching of ventilators and fluorescent lamps.	IEC 60699 EN 60669, DIN 18015	✓	✓	
	**5TT3 timers for industry**	8/47	Multifunctional, delay, wiper, flashing and OFF-delay timers in control circuits expand the use of distribution boards in both small and large plants.	IEC 60255 EN 60255			✓

8

Overview

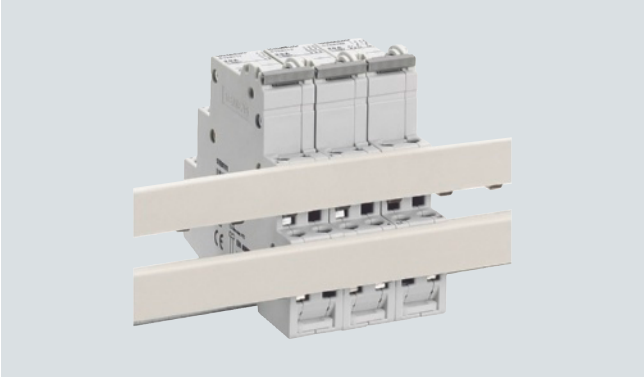
Two-way switches are used in control cabinets and distribution boards for switching small loads on/off or over.

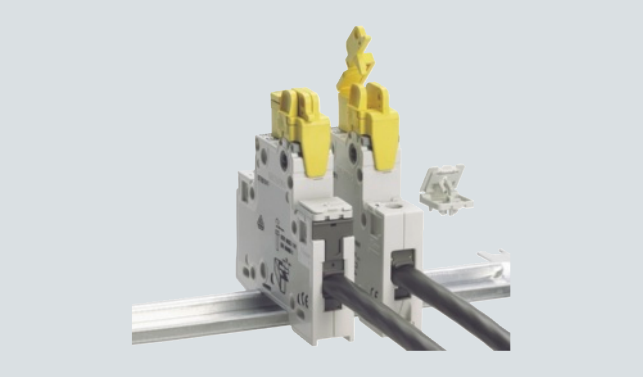
Group switches with center position permit the positions open/stop/closed, for example to control anti-clockwise rotation - Off - clockwise rotation.

Control switches in a range of contact versions have an integral control lamp for the ON setting.

The auxiliary switch (AS) signals the contact position of the switch. It has the same design as the auxiliary switch used for the miniature circuit breakers (see chapter "Miniature Circuit Breakers").

Benefits





- The control switches can be bus-mounted with each other or with 5TE4 8 pushbuttons, 5TE5 8 light indicators or 5TT4 1 remote control switches and 5TT4 2 switching relays.
- For busbars, see page 8/22.
- The handle locking device prevents undesired manual on and off switching.
- The handle locking device is a universal accessory for all switches and miniature circuit breakers.

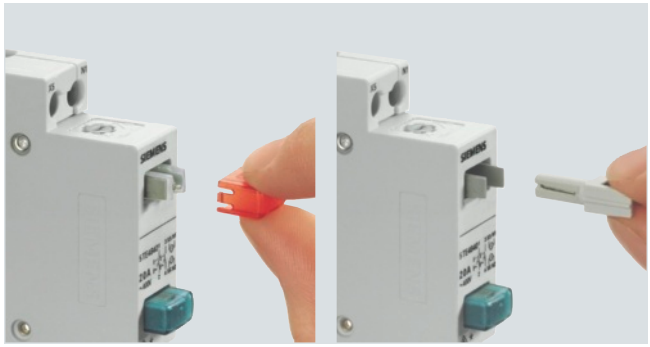
5TE4 pushbuttons

Overview

The pushbuttons are used in control systems, e. g. to switch on seal-in circuits or as pushbuttons with maintained-contact function for manual use, as control switches or for the switching of loads up to 20 A.

Benefits

- Pushbuttons with setting function for momentary-contact or maintained-contact operation can be changed over after installation and connection.
- Pushbuttons and light indicators with separate infeed in one device. This means they can also be used for voltages other than the switching voltage.



- In the case of devices with two pushbuttons and two lamps, each pushbutton must be set separately.
- Pilot lights and caps can also be safely replaced during operation without the use of tools. Functionality is quickly restored.
- A range of different-colored, transparent caps enable the signaling of plant states in compliance with IEC 60073. Three indications are possible for each device - this saves space.

Overview

Light indicators are used to signal switching states or faults in systems.

They are available as single, double or triple light indicators.

Benefits

- Pilot lights and caps can also be safely replaced during operation without the use of tools.
- A range of different-colored, transparent caps enable the signaling of plant states in compliance with IEC 60073. Three indications are possible for each device.
- The lamps are mounted in a slotted base, which protects against polarity reversal. This ensures the correct polarization for all DC applications.
- The devices have preferred positions for the N terminals, so that it is possible to bus-mount several devices. This ensures fast and simple installation.
- A light indicator with three lamps enables three-phase signaling and "traffic-light signaling" in a single modular width.

Overview

The devices are used for the switching of lighting, motors and other electrical devices.

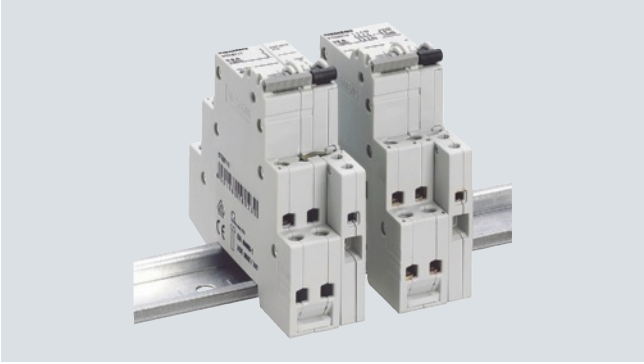
The rated currents of the range are 20 A to 125 A.
There is a compact series of space-saving devices with up to 4 NO contacts in a single MW available for rated currents 20 A and 32 A.

The ON/OFF switches in the rated currents 32 A to 125 A can be used as switch disconnectors according to IEC/EN 60947-3.

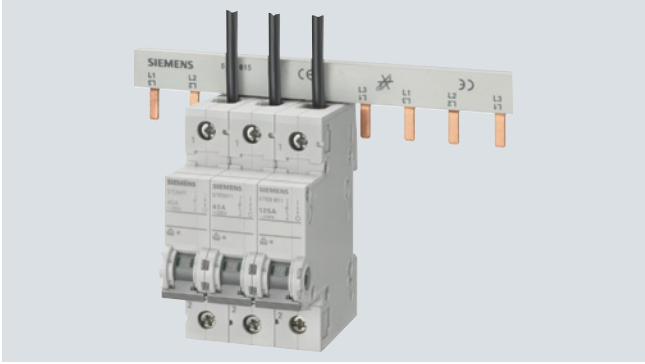
A special version of the ON/OFF switch with rated current 63 A is available for use in meter cabinets. This version can be locked in the "OFF" position using a special key. The clamping screws are mechanically covered so that they are no longer accessible.

In addition, the 5TE2 device versions can be used as switch disconnectors according to EN 60947-1. According to EN 60204-1, the devices can serve as main control switches for the disconnection or isolation of plants.

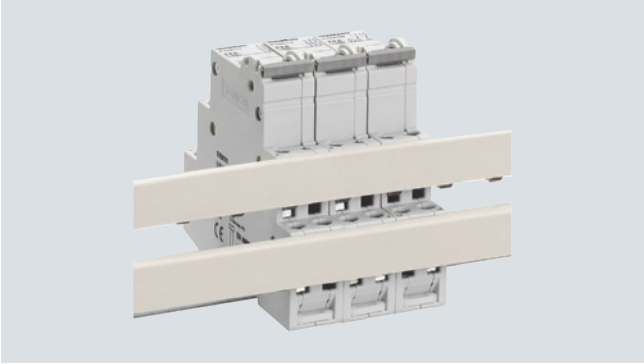
Benefits



- The switches can be retrofitted with auxiliary switches without the use of tools
- Uniform auxiliary switches for miniature circuit breakers and switches.

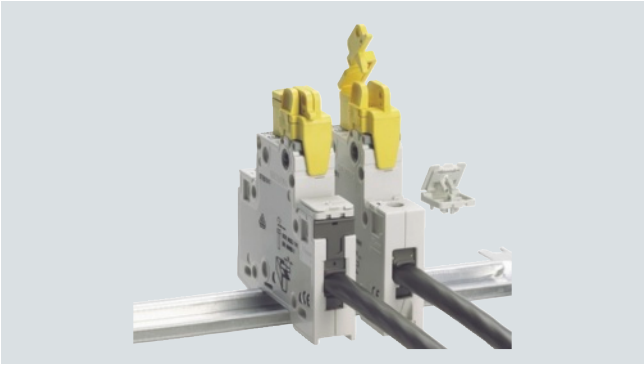


- Clear and visible conductor connection in front of the busbar for safe and easy mounting.
- The infeed can be either from the top or the bottom as the terminals are identical.



- The 20 A and 32 A switches can be bus-mounted with each other or with 5TE4 8 pushbuttons, 5TE5 8 light indicators or 5TT4 1 remote control switches and 5TT4 2 switching relays.
- For busbars, see page 8/22.

- Spacers can be used as a compensating element and have a width of 0.5 MW. They come with an integrated wiring duct for the insertion of conductors.
- Two oppositely installed spacers thus offer space for large conductor cross-sections up to 15 mm diameter.



- The handle locking device prevents undesired manual on and off switching.

5TE DC isolators

Benefits

- Switch disconnectors for isolating solar modules in photovoltaic systems acc. to DIN VDE 0100-712
- Compact DIN rail device for applications up to 1000 V DC
- Separate switching position indication for unambiguous indication of the switching state
- Compatible with all miniature circuit breaker accessories – reduced stock-keeping
- The effective touch protection when grasping the device considerably exceeds the requirements of BGV A3.
- Manual snap-on fixing and release systems that require no tools enable fast assembly and disassembly of switch disconnectors
- Clear and visible conductor connection that can be easily checked in front of the busbar.

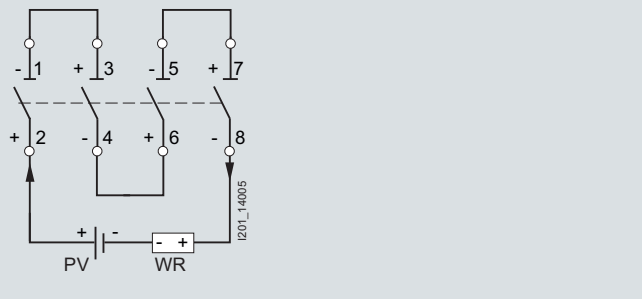
Configuration

For DC voltages up to 1000 V, the four poles need to be connected in series. In contrast to normal flush-mounting switches, these devices are also fitted with arcing chambers and permanent solenoids to aid the positive quenching of the electric arc in direct currents.



For this reason, it is essential to comply with the polarity specifications of the switches when connecting the conductor. Suitable precautions should be taken during plant configuration to ensure there can be no polarity reversal in DC operation (e. g. photovoltaic systems).

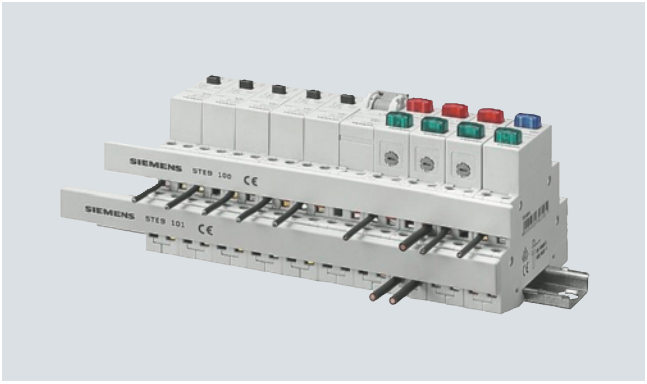
Busbars for 5ST modular installation devices

Overview

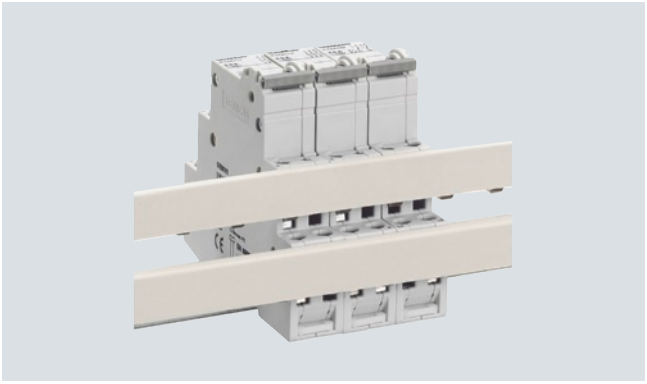
Siemens has developed a rail-mounting concept which makes the linking of switching devices just as easy as that of miniature circuit breakers.

The arrangement of the terminals on the devices is adapted to the bus mounting. With only two busbars, this saves considerable mounting time.

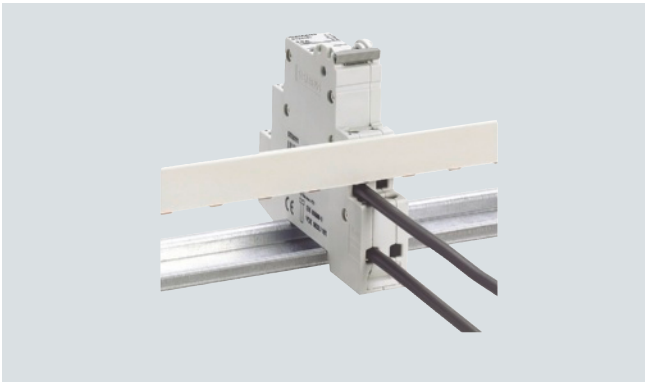
Benefits



- All 5TE8 switches (20 A and 32 A), 5TE4 8 pushbuttons, 5TE5 8 light indicators and 5TT4 1 remote control switches and 5TT4 2 switching relays can be bus-mounted.



- All 5TE8 switches (20 A and 32 A) in 1 MW can be fed via the single or two-phase busbars. Thus, 2 two-phase busbars support a 4-pole infeed.



- Infeed: The phase busbar is fed in at the tunnel terminal for conductors up to 6 mm^2 up to 32 A. No additional feeder terminals are required.

Selection and ordering data

	Version	Length	DT	Order No.	Price per PU	PU (UNIT, SET, M)	PS*/ P. unit	PG	Weight per PU approx.
		mm				Unit(s)	Unit(s)		kg
	**Single-phase busbars** For all 5TE8, 20 A and 32 A switches, In the 12 MW version for the cutting of unused terminal lugs to ensure insulation clearances if one device terminal is to be supplied separately despite being mounted on the bus, modular clearance = 1 MW Busbar infeed to unit terminal with conductor cross-section of 6 mm^2 up to 32 A Can be mounted top or bottom in the front or rear terminal area Note: An end cap is not required on single-phase busbars.	210	C	**5TE9 100**		1	10 units	027	0.034
	**Two-phase busbars** for all 5TE8, 20 A and 32 A switches, In 12 MW version with 1 MW division, whereby the two busbars are offset by 0.5 MW Both copper conductors of the two-phase busbar are insulated together. Busbar infeed to unit terminal with conductor cross-section of 6 mm^2 up to 32 A Can be mounted from top or bottom, in the front or rear terminal area, thus allowing realization of a 4-conductor connection using two two-phase busbars.	220	C	**5TE9 101**		1	10 units	027	0.076
	**End caps for two-phase busbars** End caps for 5TE9 101 two-phase busbars to keep insulation clearances when the bar is being cut. 1 set = 10 units		C	**5TE9 102**		1	1 set	027	0.001
	**5ST3 6 and 5ST3 7 busbar systems** All busbars of the 5ST3 6 and 5ST3 7 busbar systems can also be used for all 5TE8 switches from 32 A to 125 A in 1 MW per pole version (see chapter "Miniature Circuit Breakers").

5TT4 remote control switches

Overview

Remote control switches are used in residential and non-residential buildings, as well as the switchgear engineering sector. They trip in the event of "current inrushes", i. e. pulses, and then electromechanically save the switching position, even in the event of a power failure.

All the devices have the VDE mark and can also be equipped with an additional auxiliary switch. All devices have a switching position indication and are operated manually. The switching noise is particularly quiet and meets the requirements of residential buildings.

Benefits

- Remote control switches with central/group switching support convenient and high feature applications
- High functional reliability due to electromechanical design without fault-prone electronics
- The devices have no standby losses
- All devices have a switching position indication and are operated manually.
- The remote control switches can be bus-mounted on 5TE9 100 and 5TE9 101 busbars; e. g.: bus mounting of the N conductor and/or infeed.
- All the remote control switches can be fitted with an additional auxiliary switch.

Central switching functions

Versions with central ON/OFF function allow the central switching of all connected remote control switches. This type of central switching can also be actuated using a time switch. All remote control switches can be switched to the ON or OFF switching state, regardless of their current switching state.

Contact sequences

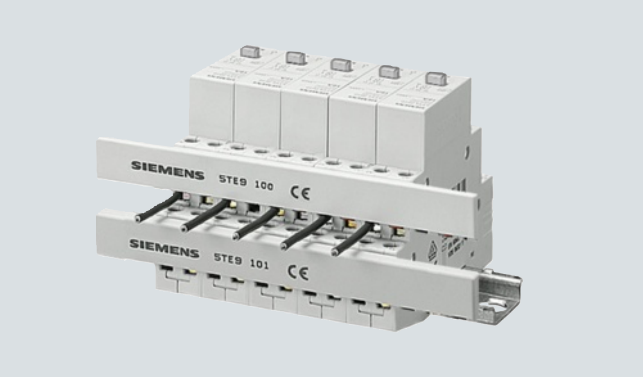
1 – 2 – 1+2 – 0 or **1 - 0 - 2 - 0** means:

0: No contact closed
1: Only contact 1 closed
2: Only contact 2 closed
1+2: Contact 1 and Contact 2 are closed.

The contact positions are constantly changing with each push-button impulse.

Note:
Synchronous switching of the contacts cannot be guaranteed with parallel switching. Products with central/group switching must be used for the mutual control of several remote control switches.

Bus mounting



All 5TT4 1 remote control switches can be bus-mounted with each other.

Note:

Busbars to match the 5TT4 1 remote control switch can be found on page 8/22.

5TT4 switching relays

Overview

Switching relays are used in residential, non-residential and industrial buildings for the purpose of contact multiplication. They can be used with safe isolation between coil voltage and contact.

With the 5TE9 100 and 5TE9 101 busbars, the switching relays can be mounted quickly and safely, e. g. by bus mounting the N conductor and/or infeed.

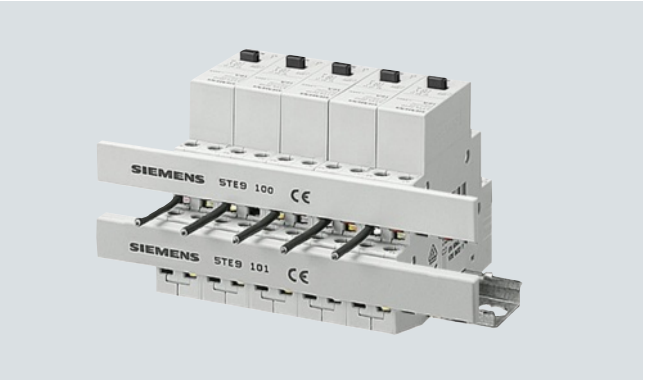
Note:

Busbars to match the 5TT4 2 switching relay can be found on page 8/22.

Benefits

- Easy installation due to busbar mounting
- Switching position indication when checking the plant for enhanced safety
- Manual intervention through manual operation.

Bus mounting



All 5TT4 2 switching relays can be bus-mounted with each other.

5TT5 Insta contactors, DC technology

Overview

Insta contactors are ideal for a wide range of uses in industry, such as for motors where distribution technology plays a major role, e.g.in auxiliary installations for heat pumps and air conditioning technology.

In addition to their basic function, they can also be used for the ON/OFF switching of single-phase and three-phase electrical motors.
The 5TT5 7 Insta contactors meet the requirements of EN 60947 and are approved to UL 508.

Benefits

- Safe cable routing through the cable entry funnel
- Insulated right through to the cable entry funnel.

- Switching position indication for fast recognition of operating state offers greater safety when checking the plant.

Overview

The 5TT5 8 Insta contactors are equipped with an AC magnetic system and are ideal for use under harsh conditions. The auxiliary switches can be mounted without the use of tools. When equipped with terminal covers, the devices can also be sealed.

Insta contactors without manual switch

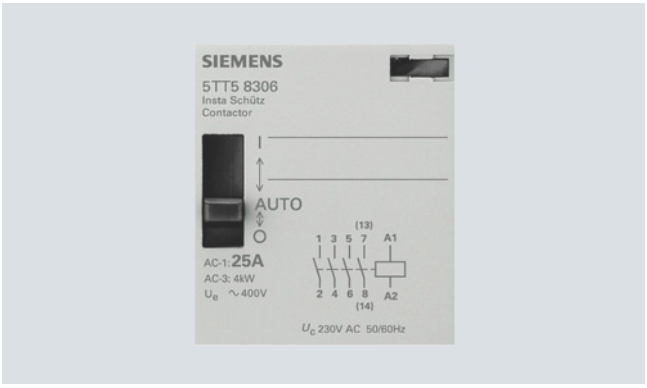
Insta contactors are ideal for a wide range of uses in industry, such as for motors where distribution technology plays a major role, e. g. in installations for heat pumps and air conditioning technology. In addition to their basic function, they can also be used for the ON/OFF switching of single-phase and three-phase electrical motors.

Insta contactors with manual switch

Insta contactors with manual operation can be switched on and off by hand.

Benefits

- Extremely long service life of 3 million switching cycles
- Safe cable routing through the cable entry funnel
- Insulated right through to the cable entry funnel.
- Auxiliary switches can be retrofitted on all versions - even on the 20 A type.



- Insta contactors with O/I/Automatic function enable the testing of a plant by manual switch without the need to apply a control voltage
- Switching position indication for fast recognition of operating state offers greater safety when checking the plant.

Overview

The soft-starting device is an electronic control system for the soft startup of one-phase asynchronous machines. A phase control causes the current to rise steadily. This also increases the motor torque and the drive starts up smoothly. The starting current is minimized. There is no speed adjustment. There is no marked soft start behavior without a mechanically connected load.
If the power semiconductor is to be protected against short circuits or ground faults during startup, a super quick fuse must be installed. In the case of high switching frequencies, we recommend installing a thermistor motor protection for monitoring the permissible motor temperature.

The soft-starting device must not be operated with capacitive load. It can be retrofitted in existing plants at any time.

Benefits

- On completion of startup, the power semiconductors are bridged, which prevents overheating in the case of frequent starting and inhibits premature wear and tear
- Separate setting of ramp up time and starting torque enables optimum adaptation to the mechanics
- The LEDs for startup and continuous operation provide constant information on the operating state.

7LF4 digital time switches

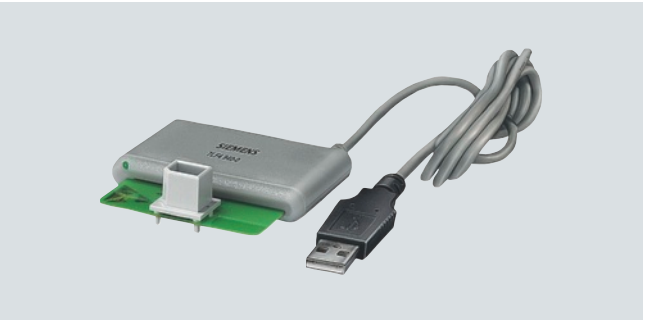
Overview

Top, Profi, Astro and Expert digital time switches

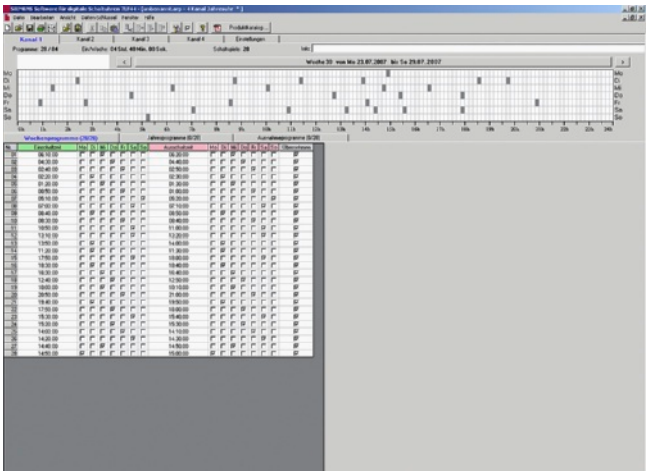
Text-assisted programming directly on the device.

The Profi, Astro and Expert digital time switches support plug-in data keys.

USB adapters



The Profi, Astro and Expert time switches are easy to program at the PC using the data key with the USB adapter and software.



- Clear data on the annual ON time of the load enables a precise statement on the annual power consumption.
- You can create switching programs conveniently at the PC, store it on the data key and transfer it locally to the time switch.
- Time saving during program creation, commissioning and maintenance.

7LF5 mechanical time switches

Overview

Mechanical time switches with day disk

Mechanical time switches with week disk

Synchronous time switches without power reserve

The control gear is driven by a synchronous motor, so it is dependent on the power supply frequency. If this frequency is unstable, the devices cannot be used. In the event of a power failure, the time switch will stop.

Quartz-clock time switches with power reserve

A quartz electronic circuit supplies the drive with a stabilized frequency, so that the time switch is not dependent on the power supply frequency. In the event of a power failure, the time switch continues to operate on its power reserve.

Overview

On stairwell lighting timers from Siemens, the required time can be precisely set without tools using the push-to-lock knurling wheel. With four-wire installations, stairwell lighting timers can always just be pressed again. A maintained light switch prevents the need for repeated pressing, for example when moving house. The various types are available with warning prior to switch-off.

Benefits

- Durable switching of different illuminants using patented contact design
- Suitable for energy-saving lamps
- Quiet switching of stairwell lighting timers
- Warning of impending switch-off according to DIN 18015-2 for stairwell lighting in apartment houses.

Overview

Time relays are primarily used in series applications where the use of PLC controls is too labor and cost-intensive. Multifunction relays are now the market standard. Operation is clear, simple and offers a range of functions.

Benefits

- Suitable for universal use because the devices can be operated with 12 V - 240 V AC/DC and work across a broad range from seconds to hours
- An off-delay without auxiliary power supports expanded application.

5TT3 timers for industry

More information

5TT3 185 multifunctional timers

Setting aids

The period of the flashing of the green LED 1 when set for a timing interval is 1 s ± 4%, which can therefore be used as a setting aid. This is particularly useful in the lower time setting range and for long delay times because the multiplication factors between the individual time ranges are exact.

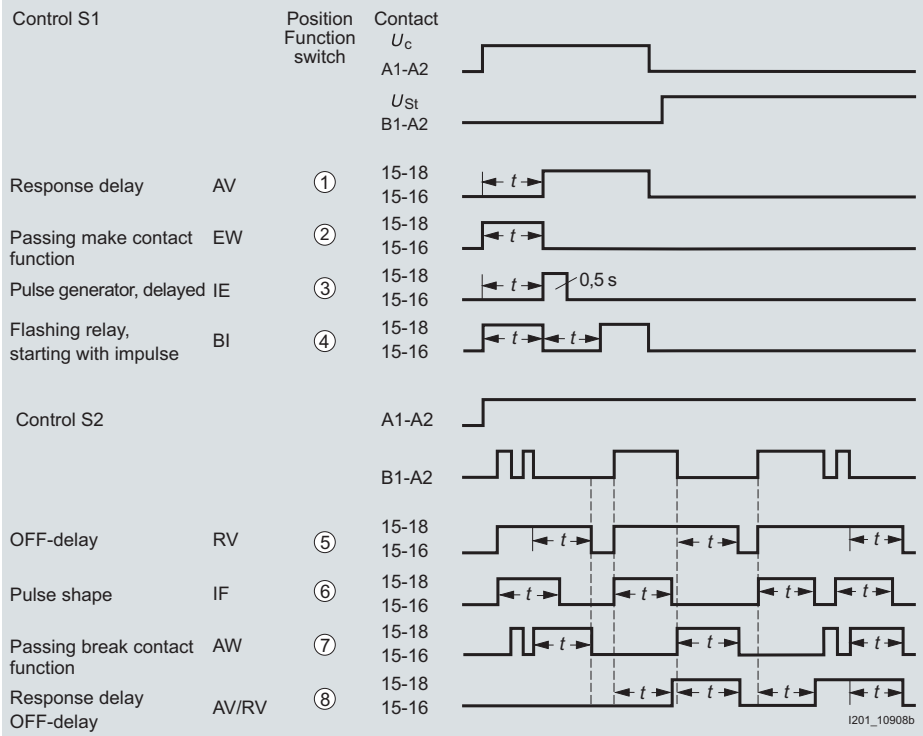
Example:
Delay time to be set: 40 min.
Using the fine setting, this delay time can be set within the setting range 3 ... 300 min. However, in this case it takes a long time to check the time and requires several operational sequences in real-time. To speed up the setting process, the setting range will be switched to 0.03 ... 3 min. In this case, the required value corresponds to a delay time 0.4 min (= 24 s). The timing interval is triggered and the potentiometer is set to 24 flashing periods of the yellow LED 2. The device is then set back to the setting range 3 ... 300 min and the setting process is completed.

Time operation interruption/time addition

For the functions AV, EW, IE, BI, the timing interval can be interrupted at any time by activating B1 (+) and by removing the control voltage continued again (time addition).

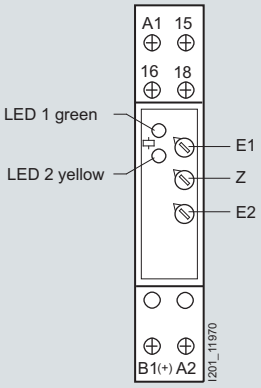
Control input B1

The functions RV, IF, AW, AV/RV can be controlled using the control input B1 (+) with potential against terminal A2. The auxiliary voltage of terminal A1 can be used for this purpose, as well as any other voltage within the range 12 ... 240 V AC/DC. The operation of parallel loads (e.g. contactors) from B1 (+) to A2 is also permissible.
If voltage is simultaneously applied to the control input B1 (+) and A1 for the IF function, this triggers an output pulse with the set time interval t_1.

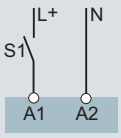


Possible time setting ranges t:

0.02	...	1	s
0.06	...	6	s
0.3	...	30	s
0.03	...	3	min
0.3	...	30	min
3	...	300	min
0.3	...	30	h
3	...	300	h

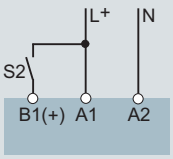


Control S1



Contact S1
For the functions: response delay, passing make contact function, pulse generator delayed, clock generator – (start with pulse) – the timing interval is triggered by closing the switching contact S1.

Control S2



Control contact S2
The functions: off-delay, pulse shape, passing break contact function, response and off-delay are triggered by continuous power supply over the control contact S2 between A1 and B1 (+).

User interfaces

9

Overview

A typical application for these bell transformers is short-time use, as occurs with bells, gongs, door openers or remote control switches in residential buildings.

Siemens bell transformers are protected against short circuit or moderate overload by a PTC resistor. After a short circuit, the primary current must be briefly disconnected from the mains before restarting.

Higher output voltages will occur in the event of low-load or no-load operation.

4AC3 safety transformers

Overview

These transformers up to 63 VA provide a safety extra-low voltage for supplying control circuits, switching relays or Insta contactors in continuous operation as alternating voltage power supply for 8 V, 12 V, 16 V, 24 V and 32 V AC.

Higher output voltages will occur in the event of low-load or no-load operation. Siemens safety transformers are protected against short circuit or moderate overload by a PTC resistor. After a short circuit, the primary current must be briefly disconnected from the mains before restarting.

Overview

The electronic power supply unit provides a 24 V DC supply to systems with an operational voltage of 85 V - 265 V AC or 85 V - 300 V DC. The device operates in the lower class for minimum power supply with a safety extra-low voltage (SELV).

The electronic power supply unit is suitable for supplying the 5TT7 1 GSM alarm modules within a supply voltage range of 150 V - 230 V AC.

Overview

The socket outlets for mounting in distribution boards to DIN 43880 and on standard mounting rails according to DIN 60715 have since become standard in modern switchgear assemblies/distribution boards. The socket outlet range complies with a number of different standards and is available according to the standards of the following countries:
VDE for Germany, CEE7 for Belgium/France, CEI for Italy and UL for USA.

In distribution boards with 55 mm mounting depth the socket outlet can only be used without the hinged lid. The lids can be retrofitted on all devices. In system components where equipment is still live, even after the main switch has been disconnected, this must be indicated according to EN 60204-1. Yellow socket outlets are used for these applications.

Overview

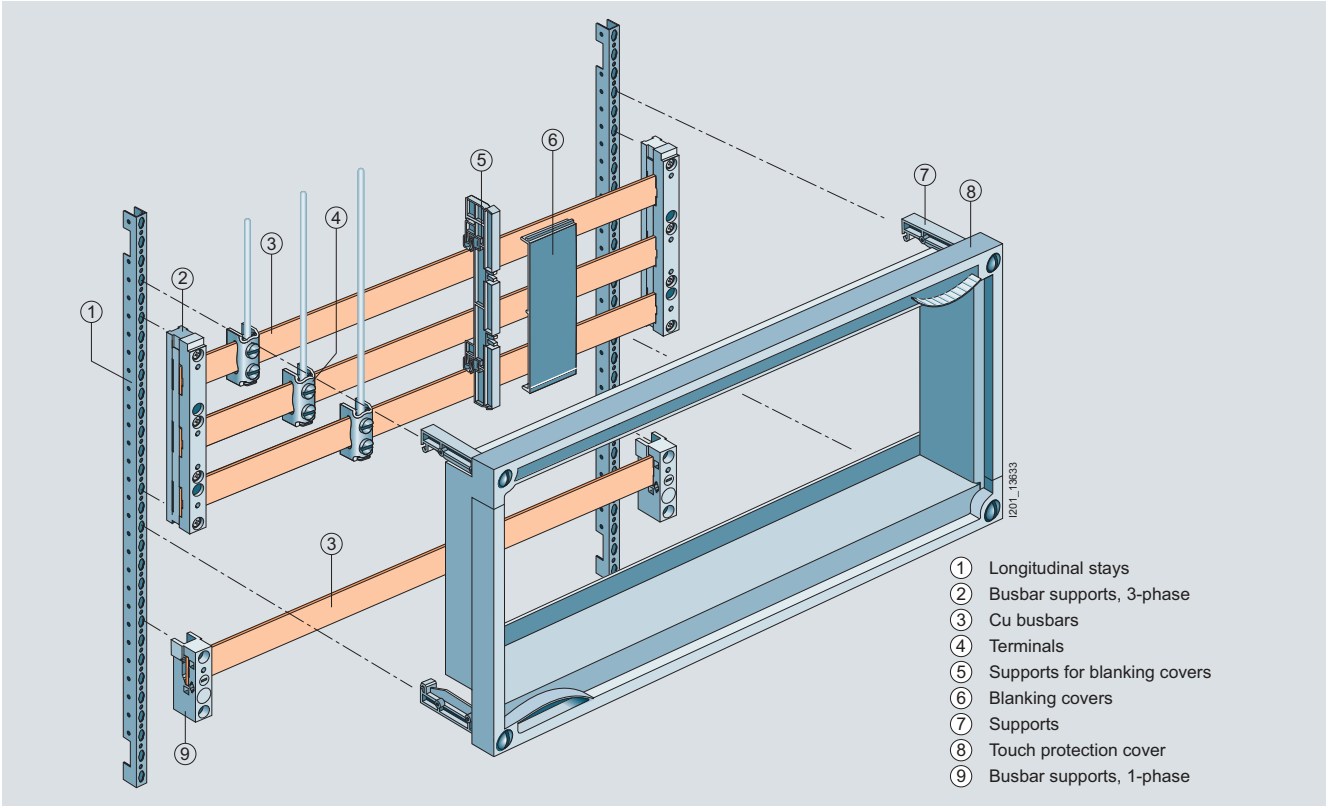
The use of busbar systems with their versatile rail-adaptable connection, switching and installation devices is an ideal and cost-effective electrotechnical enhancement of modern distribution boards due to their small footprint, compact design and quick assembly contacts. Mounting is implemented on longitudinal stays. The busbar spacing is 60 mm.



Benefits

Notable cost reduction compared to conventional installation in switchgear and control cabinets due to the following reasons:

- Mechanical fixing and electrical contacting in a single step
- No access wiring and fewer busbar terminals used
- Double use of the busbar space
- Clear arrangement
- Straightforward replacement of individual devices or whole combinations
- High operational safety through finger-safe cover of the adapters and device holders

All the above advantages are felt especially in cases where many tap-off units of the same performance range are required.

Application

8US busbar systems are used for the direct busbar-mounting of current-limiting devices (protective devices) such as fuse switch disconnectors and circuit breakers as well as complete load feeders.

8US busbar systems are designed for horizontal mounting of the busbars.

Design

8US busbar systems with 60 mm busbar center-to-center clearance as well as flat copper profiles have become firmly established on the world market.

The permissible busbar temperature is decisive when dimensioning the busbars. The busbar temperature is dependent on the current and the current distribution, on the busbar cross-section and the busbar surface, on the position of the busbars, convection and the ambient temperature. The values stated in the following table can only be considered as guide values because the conditions vary with each location. The values are based on continuous current over the whole busbar length.

The busbar runs prove most advantageous when the infeed is centrally located and the load is distributed symmetrically on both sides.

Function

Short-circuit strength

The short-circuit strength of the busbar system is dependent on the distance of the busbar supports and on the busbar cross-section.

The short-circuit strength of the whole system is dependent on the short-circuit strength of the busbars and of the adapters with circuit breakers or switch disconnectors. If one of these values is lower than the prospective short-circuit current at the installation site, a current-limiting protective device has to be mounted upstream of the 8US busbar system. This may also be mounted as a feeder circuit breaker on the busbar system itself.

General data

Technical specifications

Introduction

Overview

The 40 mm busbar system for the lower performance range up to 400 A: Terminals and covers for infeed and connection methods

The 40 mm busbar system is used in machine engineering and distribution boards, in meter cabinets and in power distribution systems of the low performance range up to 400 A.

The busbar cross-sections are adapted to the rated currents and are available in the sizes 12 x 5 mm, 12 x 10 mm, 15 x 5 mm and 15 x 10 mm. The basic system is configured without covers. If touch protection of the busbar is required, this is possible with busbar covers.

Terminals complete the product range of the 40 mm busbar system.

Introduction

Overview

The 60 mm busbar system for the medium and top performance range up to 1600 A, here for example with the 3NP1 switch disconnector, size 3

The 60 mm busbar system is used preferably in control cabinet installation, in motor control centers and in power distribution systems of the medium power range (630 A) and top performance range (1600 A, special profile).

The 60 mm busbar system can be configured as a basic system without covers. The busbar cross-sections are available in the sizes 12 x 5 mm to 30 x 10 mm and as a special profile.

Busbar device adapters for SIRIUS, 3VL circuit breakers, 3KA and 3KL switch disconnectors, and 3NP1 and 3NP5 fuse switch disconnectors offer numerous options for configuring this busbar system. Infeeds units, terminals and other accessories open up a large range of application.

Busbars with a special profile are suitable for applications up to 1600 A. All components of the 60 mm busbar system can be fitted.

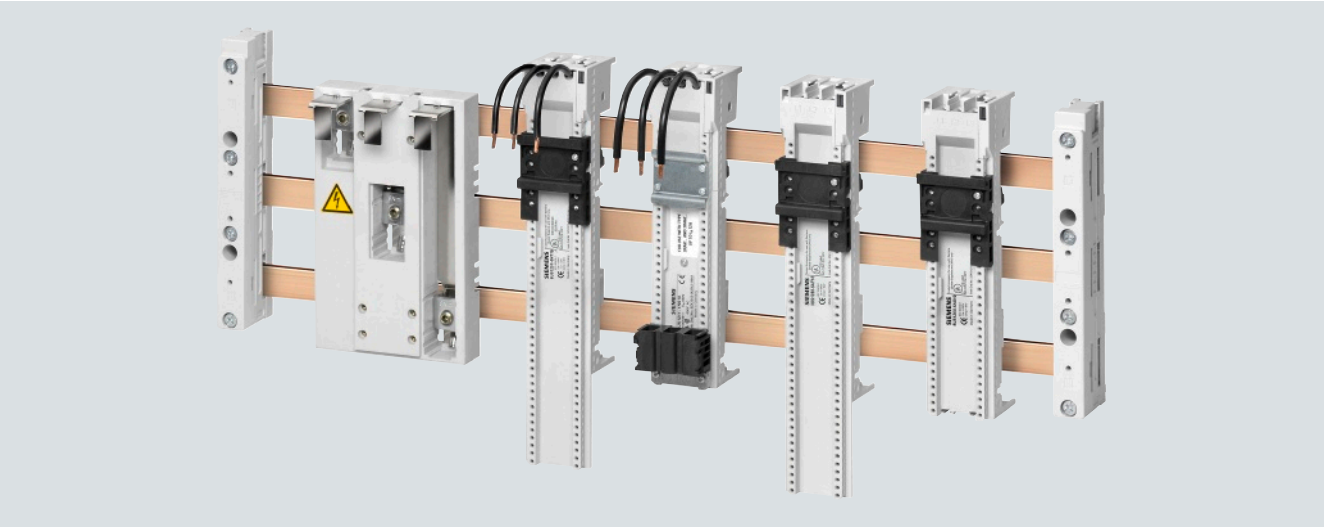
Busbar device adapters and device holders

Overview



60 mm busbar system: Busbar device adapters and device holders

All busbar device adapters and device holders are designed for copper busbars according to DIN 46433, width 12 to 30 mm, thickness 5 mm and 10 mm, and special profiles up to 1600 A.

10

1) Observe the short-circuit strength of the busbar system: Short-circuit strength > 50 kA on request.

2) Usable only for 3VL circuit breakers with line-side box terminals.

3) Without connecting cables. The connecting cable between adapter and device should be manufactured in accordance with the rated current as a round cable, e. g. H07V-R with cable lug, or as a flat conductor for a M10 stud terminal.

4) Only for 3VL250 circuit breakers, for screw fixing with metric thread, for flat terminals.

5) Without connecting cables. The connecting cable between adapter and device should be manufactured in accordance with the rated current as a round cable, e. g. H07V-R, bared at both ends for tunnel terminals.

Distribution board components

Overview

Material properties

Busbar supports and busbar-mounting fuse bases (see "Built-in components" from page 10/28) are manufactured from glass-fiber reinforced, thermoplastic polyester (color RAL 7035, light gray). The material ensures excellent mechanical, chemical and electrical properties. Furthermore, the material has an extremely low flammability and meets the requirements of UL 94 V0. This satisfies the load requirements of the busbar supports at rated operational voltage 500 V and rated currents at 200 A to 630 A, as well as the rated short-circuit strength 50 kA.

Ambient temperatures

When dimensioning the busbars based on rated currents, the ambient temperature and the Cu busbar temperature must also be taken into account.

The location of the busbar system and its ability to dissipate heat through convection also play a key role in this calculation. Because conditions can vary for each distribution board, the values in the following table serve as a guideline only. However, they must be applied to the entire busbar length.

Continuous currents depending on the Cu power rail dimensions and Cu busbar temperatures at 35°C ambient temperature

Cu busbar dimensions H × D mm × mm	Continuous current for open busbar run - Ambient temperature 35 °C A	Continuous current of fuse link Operational class gL/gG A
12 × 5	200	200
12 × 10	360	315
15 × 5	250	250
15 × 10	447	400
20 × 5	320	315
20 × 10	520	500
25 × 5	400	400
25 × 10	580	500
30 × 5	447	400
30 × 10	630	630

As far as other types of upstream protective devices are concerned, please observe the permissible continuous current of the busbar.

10

Dynamic rated short-circuit strength

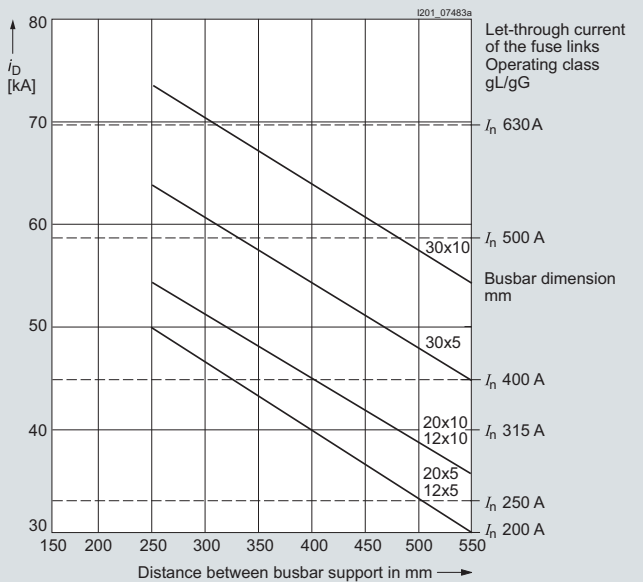
The electrodynamic load of the busbars depends on the level of short-circuit current, the length of the busbar section through which the current flows, the support spacing of the busbar supports and, of course, on the distance between the busbars themselves. This is because, for example, if an LV HRC fuse is connected upstream to the busbars in the protective device, the let-through current i_D is the maximum current to flow through this protective device. The value i_D depends on the maximum system short-circuit current and the current-limiting action of the protective device used. The permissible let-through values of the protective devices are specified by the manufacturers in the form of a current limitation diagram as a function of the so-called prospective short-circuit current (r.m.s. value of the possible rated short-circuit current for the system).

The current-limiting characteristics for the fuse links can be found in the Technical Information, see note on Technical Information at the beginning of the chapter.

For busbar supports with busbars of 12 mm x 5 mm to 20 mm x 5 mm, the distance between the holders of the support spacing should be adapted to suit the bars in the distribution board and, if possible, should not exceed 250 mm. When using busbars of 25 mm x 5 mm, 30 mm x 5 mm, 12 mm x 10 mm to 30 mm x 10 mm, the distance can also be up to 500 mm. In the case of larger distances, subcarriers must be fitted, as increased support spacing reduces the dynamic stability.

It is essential to ensure that the permissible current carrying capacity of the individual busbars is not exceeded. A center infeed is required in the limit range. However, the infeed can also be carried out at both ends of the busbar.

Diagram of the dynamic short-circuit strength of the busbars



i_D: Let-through values (kA) of the LV HRC fuse links, operational class gL/gG with rated current 200 A to 630 A for a prospective short-circuit current I_p = 120 kA.

Built-in components

Overview

Rail-adaptable built-in components, such as NEOZED and DIAZED bus-mounting bases, adapters for modular installation devices, LV HRC fuse switch disconnectors and NEOZED bus-mounting fuse switch disconnectors are made of glass-fiber reinforced, thermoplastic polyester. The material ensures the required mechanical, chemical and electrical properties.

Efficient power distribution up to 630 A.
Users have several options for mounting the SR60 busbar system:

1. Mounting in distribution boards

The busbar supports are mounted on the longitudinal stays. Once the built-in components are mounted and connected, the touch protection cover (section cover) protects against accidental contact with live parts.

2. Installation in industrial control cabinets

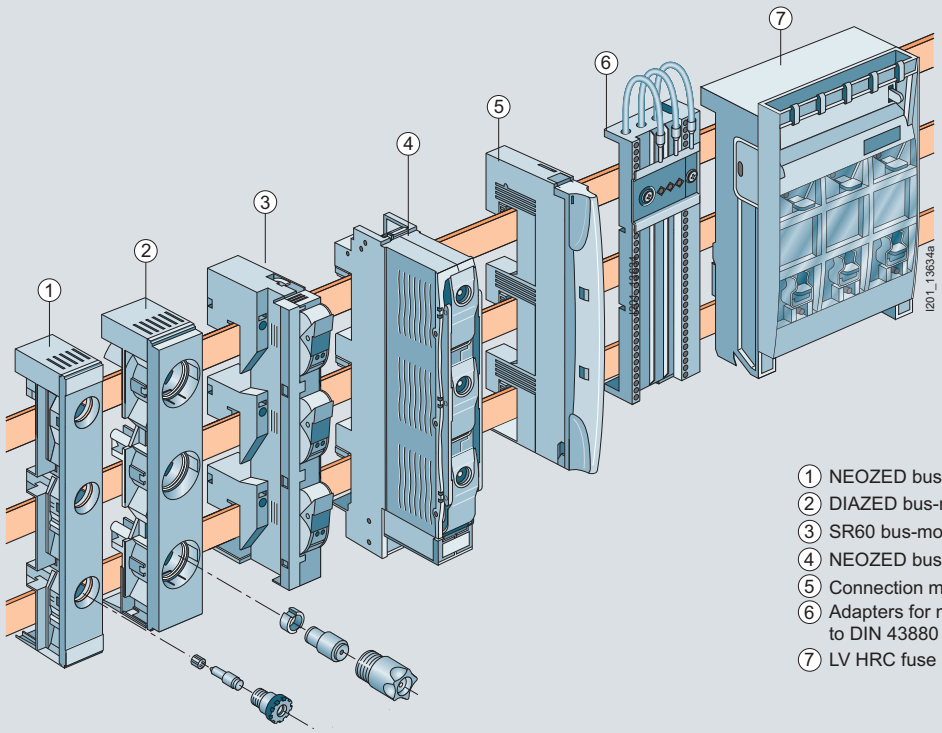
The demand for comprehensive touch protection has generated new solutions: built-in components, such as busbar fuse bases have integrated reach-through guards, enable the implementation of cost-effective overall solutions.

Previously, two optional solutions were provided, which can now be replaced using new technology: touch protection over base and edges or touch protection over partitions.

Higher overall efficiency and cost savings in the plant engineering industry.

The fuse holders for cylindrical fuses, size 10 x 38 and for American fuses, Class CC, can be used in the international plant engineering industry. In addition, Siemens offers a broad range of UL-approved components for the design of switchgear assemblies according to UL 508 A.
For further information, see chapter "BETA Devices according to UL Standards" in Catalog LV 16 · 2009.

Fuse holders are available with a connection module 16 mm² and screwless terminals; this offers users maximum safety and comfort.



1. NEOZED bus-mounting bases, 3-pole
2. DIAZED bus-mounting bases, 3-pole
3. SR60 bus-mounting fuse holders, 3-pole
4. NEOZED bus-mounting switch disconnectors, 3-pole
5. Connection modules, three-phase
6. Adapters for modular installation devices according to DIN 43880
7. LV HRC fuse switch disconnectors

Benefits

- The direct contact of the rail-adaptable switching and installation devices on the Cu busbars reduces distribution panels and mounting times
- Compared to conventional installation, the transfer resistance of the connections is drastically reduced This prevents unnecessary temperature rise
- New built-in components with touch protection ensure comprehensive touch protection without the previously required partitions
- International application due to UL-approved components
- Enhanced effectiveness and increased safety due to screwless terminals.

PC-based power management system

Overview

Components of the PC-based power management system

User interface of powermanager

Power management system with the SENTRON product family

The SENTRON product family offers the user not only power management software in the form of SENTRON powermanager but also the corresponding hardware in the form of 7KM PAC measuring devices and 3WL/3VL circuit breakers for the realization of a complete power management system.

The components are optimally coordinated with each other. For example, special drivers for the SENTRON devices are integrated in the powermanager software so that on the one hand the power data acquisition can take place without any great configuration effort and, on the other hand, the most important measured values or states are indicated by predefined displays.

This reduces the engineering work for the customer and gives the user the assurance of knowing that the device functions are optimally supported in the software.

Power management software powermanager

The power management software powermanager is at the heart of the PC-based power management system and

- is an independent power management software.
- can be operated using a PC and measuring devices with Ethernet connection.
- is expandable from the simple standard application to a fully flexible customer solution.
- is fully scalable with regard to the number of devices and to the software's functions.
- ensures the optimum integration of measuring devices from the 7KM PAC range, 3WL/3VL circuit breakers and other devices.

The power management software powermanager includes a client/server installation for recording, preparing, displaying and archiving power data. These power data are supplied primarily by 7KM PAC measuring devices or 3WL/3VL circuit breakers, which are connected to the system through Ethernet.

The powermanager software is available in the "Expert", "Web" and "Distributed Systems" option packs.

Benefits

- Transparency of power flows
- Exact knowledge of the consumption profile
- Increase of power efficiency
- Optimization of power supply contracts
- Compliance with contractual terms
- Assignment of power costs to cost centers
- Optimization of plant maintenance
- Identification of critical plant conditions

Application

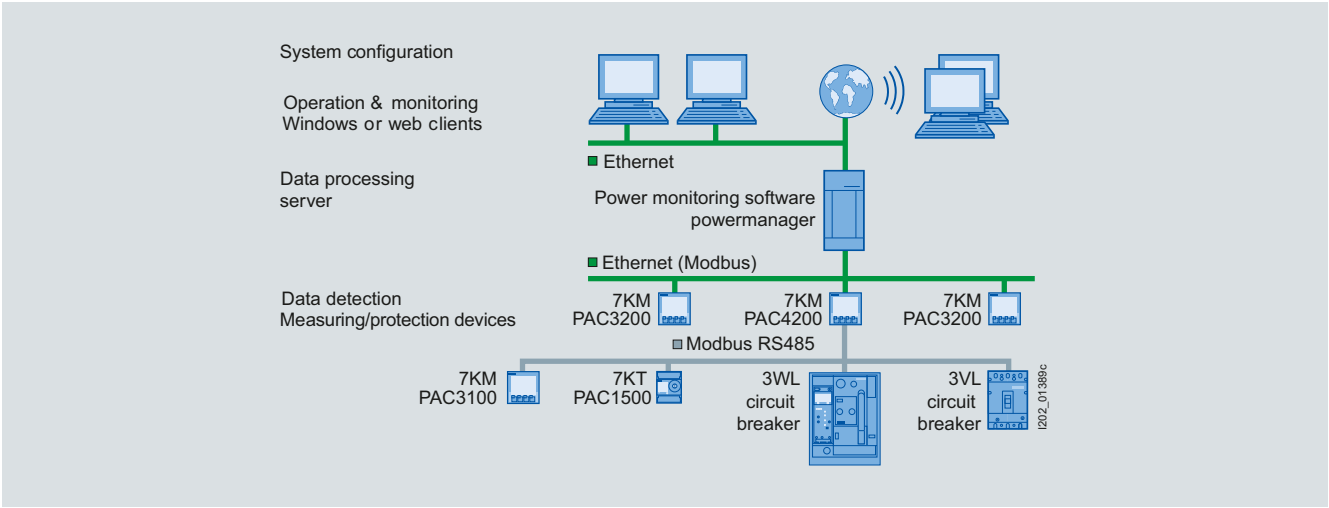
The PC-based power management system is used wherever power flows need to be transparently displayed and monitored.

Industries

Energy efficiency thanks to power management with consistent monitoring and the resulting optimization measures is important for all industries, e. g. in the manufacturing industry, in non-residential buildings, in the field of services, and in infrastructure projects. This has a particular impact on competitiveness, particularly in view of rising energy prices.

System configuration with powermanager

- Integration of measuring devices by means of predefined device templates for the 7KM PAC family and the 3WL/3VL circuit breakers
- Easy integration of existing modbus-capable detecting devices
- Communication through Standard Ethernet
- Integration of devices with RS 485 interface (ModbusRTU) through Modbus gateway, e. g. the 7KM PAC4200 measuring device can be used as gateway



System overview

More information

Hardware components

The hardware components of the PC-based power management system are

- the 7KM PAC measuring devices in this chapter
- the open 3WL circuit breakers in chapter 1
- the 3VL molded case circuit breakers in chapter 2

Software

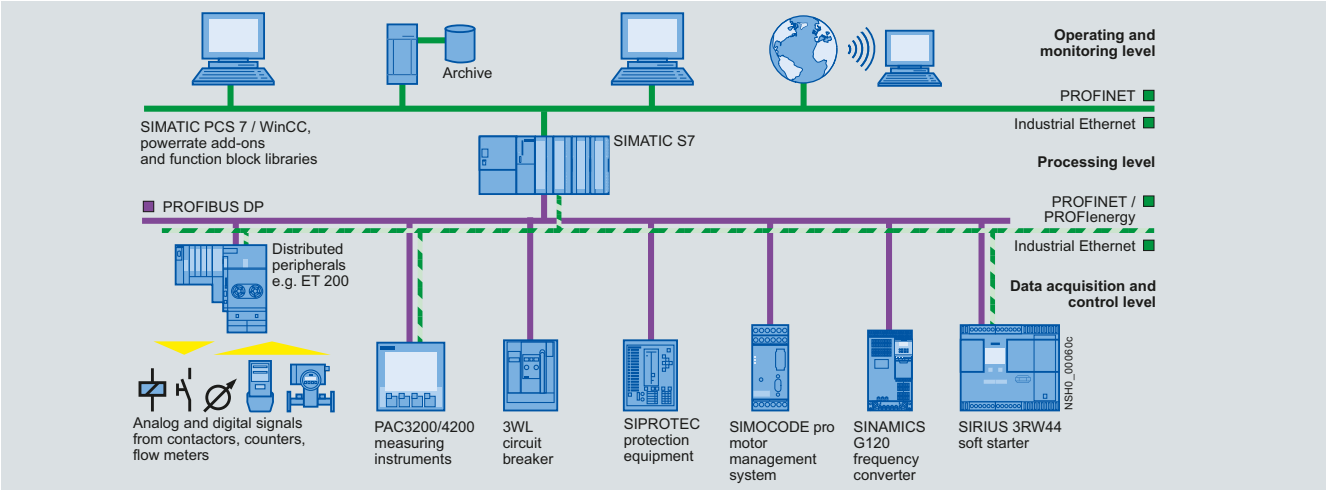
The software for the PC-based power management system is powermanager, see chapter 13 "Configuring, visualizing and controlling with SENTRON".

Internet

You can find more information on the Internet at:
www.siemens.com/powermanagementsystem.

SIMATIC-based power management system

Overview



SIMATIC-based solutions for the process and manufacturing industry

Besides the high level of automation, a key feature of the process and manufacturing industry is a very high power consumption. It is only natural, therefore, to integrate a power management system in the existing systems.
The add-on SIMATIC powerrate for WinCC and PCS 7 makes it possible to provide transparency and control in power distribution and energy costs.

Integration of switching, protection and measuring devices

For complete integration of low-voltage power distribution components in process and SCADA systems, PROFIBUS DP interfaces and function block libraries are available, e. g. the PAC3200 function block library for SIMATIC WinCC and PCS 7. The software add-ons can therefore be used to display all the data supplied from the devices without major engineering work.

PROFINET and PROFIenergy

An increasing number of devices in automation technology offer PROFINET. There is also a Switched Ethernet PROFINET module for the 7KM PAC3200 and PAC4200 measuring device.
PROFIenergy is a "Common Application Profile" from the PNO. Thanks to PROFIenergy, it is possible to assemble a power management system with standardized device interfaces.

SIMATIC powerrate

The SIMATIC powerrate software is at the heart of the SIMATIC-based power management system and

- is an add-on to PCS 7 and WinCC which throws light on power consumption from the infeed to the load.
- continuously collects, archives and processes power data.
- creates a load profile and works out potential savings based on exact knowledge of the load profile.
- monitors the contractually agreed power limit.
- enables the exact recording and evaluation of power consumption per batch through batch-related consumption recording.
- enables the monitoring or indication of switch status and, with suitable authorization, remote switching.
- shows selected online measurements and signaling from the 7KM PAC3200 and PAC4200 measuring devices.
- collects archived data, which can be exported to Excel and presented in various reports.

Benefits

- Increased energy efficiency due to exact knowledge of the load profile
- Optimization of power supply contracts
- Assignment of power costs to cost center
- Optimization of plant maintenance
- Identification of critical plant conditions
- Reliable monitoring of the power limits through automatic load management

Application

The SIMATIC-based power management system is used wherever power flows need to be transparently displayed and monitored, and also where it is necessary to effectively intervene above the process control level.

Industries

SIMATIC powerrate is used in all areas in which PCS 7 or WinCC is used and energy efficiency considerations play a major role.

Overview

Devices	Page	Application	Standards	Used in		
				Non-residential buildings	Residential buildings	Industry
7KM PAC measuring devices						
 **7KM PAC3100 measuring devices** AC/DC power supply unit with screw connection	11/10	Control panel instrument with graphics display, integrated digital in- and outputs and a RS 485-interface for the transfer of measured values and configurations. Display of 30 electrical measured values and consumption values in switchgear assemblies, infeed or outgoing units. International standards and multi-lingual displays for worldwide use.	IEC 61557-12	✓	--	✓
 **7KM PAC3200 measuring devices** 3 versions: • AC/DC power supply unit with screw connection • DC power supply unit with extra-low voltage, screw connection • AC/DC power supply unit with ring terminal lug connection	11/11	Control panel instrument with graphics display, integrated digital in- and outputs and an integrated Ethernet interface for the transfer of measured values and configurations. Display of over 50 electrical measured values for switchgear assemblies, infeed or outgoing feeders. Dual-tariff energy counters for precise energy monitoring for power draw and feedback. The following components are available: • 7KM PAC Switched Ethernet PROFINET • 7KM PAC Modbus RTU via RS 485 • 7KM PAC PROFIBUS DP	Energy-measurement accuracy according to IEC 62053	✓	--	✓
 **7KM PAC4200 measuring devices** 3 versions: • AC/DC power supply unit with screw connection • DC power supply unit with extra-low voltage, screw connection • AC/DC power supply unit with ring terminal lug connection	11/12	Control panel instrument with graphics display, user-defined displays, memory, clock and calendar function, digital in- and outputs and an integrated Ethernet interface with gateway function to transfer measured values and configurations. Display of over 200 electrical measured values for switchgear assemblies, infeed or outgoing feeders. Extensive functions for precise energy-monitoring for power draw and feedback and for appraisal of network quality. The following components are available: • 7KM PAC Switched Ethernet PROFINET • 7KM PAC Modbus RTU via RS 485 • 7KM PAC PROFIBUS DP • 7KM PAC 4DI/2DO	IEC 61557-12	✓	--	✓
 **Expansion modules for 7KM PAC measuring devices**	11/13	• The 7KM PAC Switched Ethernet PROFINET expansion module serves to connect the 7KM PAC3200 and PAC4200 measuring devices to Switched Ethernet PROFINET (PROFIenergy). • The 7KM PAC PROFIBUS DP expansion module serves to connect the 7KM PAC3200 and PAC4200 measuring devices to the PROFIBUS DPV1. • The 7KM PAC RS485 extension module serves to connect simple devices with RS 485 interface, such as 7KM PAC3100, and supports the Modbus RTU protocol. • The 7KM PAC 4DI/2DO expansion module is used to expand the 7KM PAC4200 measuring device to up to 10 digital inputs and 6 digital outputs.	IEC 62053-31	✓	--	✓

Introduction

Overview

Precise measuring with 7KM PAC3100, PAC3200 and PAC4200

The 7KM PAC measuring devices:
PAC3200 (left), PAC3100 (center) and PAC4200 (right)

The 7KM PAC measuring devices are used to measure and indicate all relevant network parameters in low-voltage power distribution. They can be used for single-phase measurements as well as for multiphase measurements in 3 and 4-conductor networks (TN, TT, IT).

Energy values for main distribution boards, electrical branches or individual loads are recorded precisely and reliably, and important measured values are supplied in addition for assessing the state of the plant and the quality of the network.

More information

More information is available on the Internet at:
www.siemens.com/powermanagementsystem.

Benefits

7KM PAC measuring device, general

The common features of all measuring devices in the 7KM PAC series:

- Simple mounting and commissioning
- High IP65 degree of protection (front side, when installed) permits usage in extremely dusty and wet environments
- Intuitive operation using 4 function buttons and multilingual plain text displays
- Easy adaptation to different systems using integrated and optional
  - digital inputs and outputs
  - communication interfaces
- Worldwide use
  - min. 8 languages
  - international approvals
  - developed and tested according to European and international standards
- Low mounting depth

7KM PAC3200 and 7KM PAC4200 measuring device

Additional performance characteristics of the 7KM PAC3200 and 7KM PAC4200:

- Precise energy recording
- Versatile system integration
  - Integrated Ethernet interface
  - Optional communication modules available
  - Multifunctional digital inputs and outputs
  - Limit monitoring
- Can be directly connected to power supply networks up to 690 V AC (UL-L), CATIII without voltage transformer
- Easy-to-use configuration software included in the scope of supply

7KM PAC4200 measuring device

Additional performance characteristics of the 7KM PAC4200:

- Monitoring the plant status and the system quality
  - Basic information for evaluating network quality
  - Logging of plant history in the form of operation, control and system-related events
- Recording of the power range through power averaging (load profile)
- Daily energy meters for apparent, active and reactive energy across 365 days for cut-off date assessment
- Detection of gas, water, compressed air or other energy sources via pulse counter to the digital inputs
- Can be expanded using modules to up to 10 digital inputs and 6 digital outputs
- Counters for apparent, active and reactive energy for the precise detection of the power consumption of a partial process or manufacturing process
- 10/100 Mbit/s Ethernet interface with gateway function for the easy connection of devices with serial RS485 interface via 7KM PAC RS485 expansion module to an Ethernet network
- Comprehensive convenience indicators, such as user-defined displays, bar and status indicators, phase diagram and list and histogram graphics
- Satisfies the accuracy requirements of class 0.2S high-precision meters used by power supply companies according to IEC 62053-22, which are normally reserved for exacting industrial applications

Overview

From left to right:
7KM PAC Switched Ethernet PROFINET expansion module
7KM PAC PROFIBUS DP expansion module
7KM PAC RS485 expansion module
7KM PAC 4DI/2DO expansion module

Expansion modules act as communication interfaces for 7KM measuring devices.

Communication modules are plugged in at the back of the measuring device. The device identifies the module automatically and presents the relevant parameters for this module for selection in the parameterization menu.

7KM PAC Switched Ethernet PROFINET expansion module

The 7KM PAC Switched Ethernet PROFINET expansion module is a plug-in communication module for the 7KM PAC3200 and PAC4200 measuring devices.

- Standardized PROFIenergy interface to the measured quantities.
- The measured quantities can be individually selected using a GSDML file. This enables the use of cost-effective S7-CPUs.
- Easy parameter assignment using the device display and STEP 7.
- Integrated Ethernet switching allows networking with short cables without additional switches.
- Direct integration in production machine networks using IRT (IRT = Isochronous-Real-Time).
- Full support of PROFINET IO (DHC, DNS, SNMP, SNTP).
- Device replacement without PG in the PROFINET assembly using LLDP.
- Deterministic reversing time through ring redundance (MRP).
- Modbus TCP for communication with 7KM powermanager or powerconfig.
- 2 x Ethernet (RJ45) sockets.
- Baud rates 10 and 100 Mbit/s.
- Protocols PROFINET IO, PROFIenergy and Modbus TCP.
- No external auxiliary power necessary.
- Additional display via the device display and via LEDs on the module.

All measured quantities from 7KM PAC3200 and PAC4200 are individually selected and cyclically transmitted by means of the GSDML file. This enables optimum use of the process image of the PROFINET controller, e. g. CPU 315-2 PN/DP of SIMATIC S7.

The measured quantities can be read out in acyclic mode using PROFIenergy, a PNO protocol profile. Thanks to PROFIenergy, it is possible to assemble an energy management system with devices from various manufacturers using PROFINET.

7KM PAC PROFIBUS DP expansion module

The 7KM PAC PROFIBUS DP expansion module has the following features:

- Pluggable communication module for 7KM PAC3200 and PAC4200 measuring devices
- Parameterizable from the front of the device or using parameterization software
- Using PROFIBUS DPV1, data can be transferred in both cyclic and acyclic modes
- Easy engineering thanks to integration into SIMATIC STEP 7 and/or simple integration via GSD file for other programming systems
- Optimum use of process image of a control system for selection of individual measured quantities for cyclical transfer
- All baud rates from 9.6 kbit/s up to 12 Mbit/s are supported
- Connection through 9-pole Sub-D connector according to IEC 61158
- No external auxiliary power necessary
- Additional display via the device display and via LEDs on the module

7KM PAC RS485 expansion module

The 7KM PAC RS485 expansion module has the following features:

- Pluggable 7KM PAC RS485 communication module for 7KM PAC3200 and PAC4200 measuring devices
- Parameterizable from the front of the device or using parameterization software
- Support for the Modbus RTU protocol
- Plug and play
- Baud rates 4.8 / 9.6 / 19.2 and 38.4 kbit/s are supported
- Connection by means of 6-pole screw terminals
- No external auxiliary power necessary
- Status indication by LED on the module

The 7KM PAC RS 485 expansion module is required for the gateway function of the 7KM PAC4200 to achieve simple devices with RS 485 interface, such as the 7KM PAC3100, via Ethernet (Modbus TCP).

7KM PAC 4DI/2DO expansion module

The 7KM PAC 4DI/2DO expansion module is used to expand the 7KM PAC4200 measuring device to up to 10 digital inputs and 6 digital outputs.
It offers the following features:

- Up to two 7KM 4DI/2DO modules can be plugged onto a PAC4200.
- The 7KM PAC 4DI/2DO modules mean that the internal digital inputs and outputs can be expanded by up to 8 inputs and 4 outputs.
- The 4DI/2DO expansion modules can be parameterized via the front of the device or via the powerconfig configuration software.
- The digital inputs can be used without external voltage sources. They are self-powered.
- All functions of the integrated multifunctional inputs/outputs on the 7KM PAC4200 are also available in the 7KM PAC 4DI/2DO expansion module.
- Inputs and outputs can be used as an S0 interface according to IEC 62053-31.
- The connection is made via a 9-pole screw terminal.
- No external auxiliary power supply is required.

Overview

7KT PAC 1500 (7KT1 543) 3-phase counters with direct connection up to 80 A

The counters (power meters) are used to record the amount of electrical energy exported or imported. Siemens compact counters are designed as modular devices for alternating current and can be mounted on standard mounting rails. They comply with the counter standard EN 50470 (Part 1 and 3) and come with an LCD display.

Three-phases counters are available for direct connection up to 125 A and in versions with transformer connections (…/5 A to 10000/5 A).

Counters store active and reactive energy, and comply with accuracy class 1 (for active energy).

All counters have a pulse output (S0) and are designed for 2-tariff measurements. The calibrated versions are in accordance with the new Measuring Devices Directive 2004/22/EC (MID).

At the same time, the counters have an integrated optical interface (IrDA) for connecting communication modules, which enables their integration in a range of other systems, such as power management systems.

Overview

Digital 7KT1 53 counters

The 7KT PAC1500 counters (power meters) are used to record the amount of electrical energy exported or imported. They comply with the counter standard EN 50470 (Part 1 and 3) and come with an LCD display.

The PAC1500 single phase counters for direct connection are available up to 80 A. They store both active and reactive energy and all comply with accuracy class 1 (for active energy).

All counters have a pulse output (S0) and are designed for 1-tariff or 2-tariff measurements, depending on the version.

The calibrated versions are in accordance with the new Measuring Devices Directive 2004/22/EC (MID). At the same time, the counters – except version 7KT1 530 – have an integrated optical interface (IrDA) for connecting communication modules.

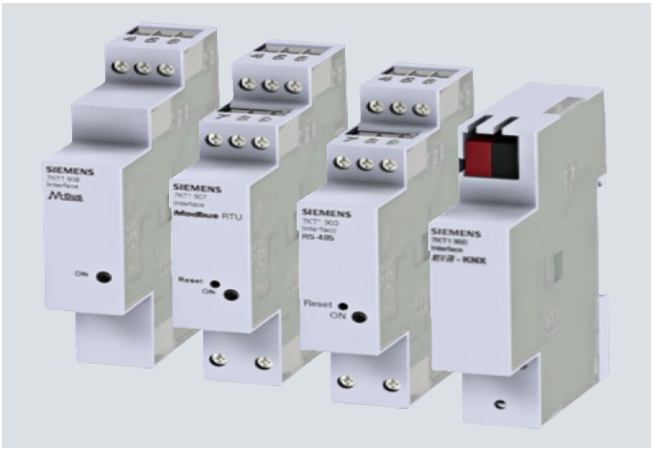
Expansion modules for 7KT PAC counters

Overview



Expansion modules for 7KT PAC1500 counters, from left to right:
Expansion modules for M-Bus, Modbus RTU, RS 485, Instabus KNX

Expansion modules are used as communication interfaces for 7KT PAC1500 counters. They have the following features:

- The expansion modules can be selected independently of the counters. Retrofitting of already installed measuring devices is therefore possible if required.
- Data transmission between the counters and the expansion modules takes place through the IrDA infrared interface.
- The expansion modules are placed alongside the counters in the installation direction so that their IrDA interfaces are exactly opposite.

7KT1 908 M-Bus communication modules

- Power supply through bus cable
- Baud rates: 300 to 9600 kbit/s
- Status indication by LED on the module
- Can be parameterized using M-Bus Master software

7KT1 907 Modbus RTU expansion modules

- Power supply: 230 V AC
- Baud rates: 4.8 / 9.6 / 19.2 and 38.4 kbit/s are supported.
- Status indication by LED on the module
- Can be parameterized using RS 485 Master software

7KT1 903 RS 485 expansion modules

- Power supply: 230 V AC
- Status indication by LED on the module

7KT1 900 7KNX/EIB expansion modules

- Power supply through the KNX/EIB bus cable
- Status indication by LED on the module

Overview

7KT PAC3000 measuring devices

Features

- Measuring devices with LED display
- For direct (80A) and transformer connection (/5A)
- Display of up to 38 measured values
- 9 display levels, each with 6 display units (one level freely configurable)
- Password-protected menu setting
- S0 pulse outputs
- Integrated RS485 interface (for connecting to the 7KT1391 LAN coupler or communication using Modbus RTU)

Technical specifications

Digital voltmeters and ammeters

Overview

Digital measuring devices: Left: 7KT1 voltmeter, right: 7KT1 ammeter

These devices for measuring voltages and currents can be used for monitoring incoming and outgoing currents or device currents in electric plants.

They are suitable for direct connection in a single-phase system or with measuring transducers in three-phase systems.

The measuring ranges of the ammeter are set at the device with a coding switch.

Benefits

- The ammeters have 14 measuring ranges from 0 A to 20 A to 0 A to 999 A, which can be set using a coding switch. This ensures universal application.

Time and pulse counters for standard rail mounting

Overview

Time counters: left: electromechanical, right: electronic

Time and pulse counters are used for the reliable monitoring of production and service times, which enables the exact planning and monitoring of production sequences, maintenance cycles and warranty times.

As well as the proven electromechanical time and pulse counters for mounting in distribution boards, we also supply digital time and pulse counters.

The fields of application for both counter types are very diverse, such as the recording of operating hours of machines, systems or building management systems, as well as pulse counting for general volume flow counting, registration of starting frequencies, starting cycles or production quantities in systems and machines.

Benefits

- Time and pulse counters help to plan maintenance intervals, which safeguard and ensure high plant availability.
- Versions without zero position and with electric or manual zero position for all applications.
- Flexible application of the digital counters for power supplies of 12 V to 150 V DC and 24 V to 240 V AC in a single device.

More information

Time counters count the time in hours with an accuracy of two decimal places (hundredths of hours). The pulse counter adds the number of pulses, e. g. the making operations of devices.

A power supply is required at terminals 1 and 3 of the electronic counters, so that the device can constantly display the measured values. Once terminal 3 is supplied with voltage (for DC "+"), the counting procedure starts. If terminal 4 is supplied short-time with voltage (for DC "+"), the counter is reset.

In the case of electronic counters, the counting result is saved indefinitely in the event of a power failure (EEPROM). On recovery of the power, the counting is continued from the saved value. As well as a modern design, the electronic counter has a 7-digit LCD, which can be reset electrically or manually.

Time counters for front-panel mounting

Overview

Time counters: left: Counting mechanism, right: Counting mechanism with front frame

Time and pulse counters for control cabinets, control systems and mechanical engineering are used, e. g. in boilers, machine tools or compressors. The pulse counters count the starting frequencies. This supports planning for preventative maintenance.

In-time and regular maintenance is the best protection against unexpected shutdowns.

Benefits

- Time and pulse counters help to plan maintenance intervals, which safeguard and ensure high plant availability.

7KT1 391 LAN couplers

Overview

7KT 391 LAN couplers

A LAN coupler supports worldwide data retrieval from 7KT PAC measuring devices and counters, provided there is a LAN link to the Internet.

Up to 30 devices can be linked to a LAN coupler via a Web browser, such as Firefox. In turn, the LAN coupler is connected to a LAN.

Data communication between the LAN coupler and the PC takes place using the TCP/IP protocol.

Application

Suitable 7KT PAC measuring devices and counters

The following measuring devices and counters can be connected to the LAN coupler:

	Order No.
Energy counters	
7KT PAC1500 digital three-phase counters	
• For direct connection 80 A, double rate	7KT1 543
• For direct connection 80 A, double rate, calibrated version	7KT1 545
• For transformer connection .../5 A, double rate	7KT1 540
• For transformer connection .../5 A, double rate, calibrated version	7KT1 542
• For direct connection 125 A, double rate	7KT1 546
• For direct connection 125 A, double rate, calibrated version	7KT1 548
• For direct connection 63 A, double rate	7KT1 520
• For transformer connection .../5 A, double rate	7KT1 521
• Digital single-phase counters	
• 7KT PAC1500, for direct connection 80 A, double rate	7KT1 531
• 7KT PAC1500, for direct connection 80 A, double rate, calibrated version	7KT1 533
7KT PAC3000 measuring devices	
• 7KT PAC3000, for direct connection	7KT1 340
• 7KT PAC3000, for transformer connection .../5 A	7KT1 341

Connecting several devices to a 7KT 391 LAN coupler

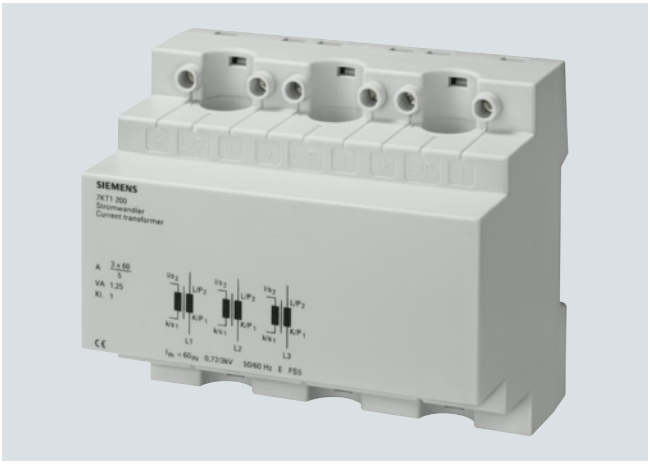
Overview



7KT1 2 current transformers

The 7KT1 2 3-phase current transformer can be used in distribution boards according to DIN 43880. The measuring leads are routed vertically through the standard mounting rail.

This type of current transformer is suitable for infeeds or outgoing conductors in connection with the installation of a 5TE8 switch or a 5TE1 disconnector, as the primary connecting leads do not have to be interrupted.
The current transformer is designed for cables of up to 13 mm in diameter, e. g. H07V-R with 50 mm^2 conductor cross-section.

Benefits

- The current transformer has accuracy class 1 in accordance with EN 60044-1. This value is better than most measuring devices in this area of application.
- The versions designed for a transformer ratio of 60/5 A, 100/5 A and 150/5 A enable an even broader range of applications.

7KT9 0 measuring selector switches

Overview

Measuring selector switches (voltmeter selector switch)

Measuring selector switches are used as CO contacts of the phases for voltages and currents in three-phase systems for voltmeters and ammeters.

The design of these switches is adapted to match the modular installation devices. They support use in compliance with EN 60947-3.

Benefits

The devices have a rated insulation voltage of 660 V. This permits use in many systems.

Overview

3KC ATC5300 transfer control devices

Automatic transfer control via the 3KC ATC5300

The 3KC ATC5300 transfer control device, equipped with two motor-driven circuit breakers, serves as a transfer system that automatically or manually switches between two power supply systems in low-voltage power distribution applications.

In particular, the 3KC ATC5300 transfer control device is deployed everywhere where a power failure is especially critical, e. g. in hospitals, in conjunction with UPS systems, and for industrial processes.

Mode of operation

The 3KC ATC5300 transfer control device controls the transfer between the main and standby power supplies fully automatically, while incorporating set limit values and delay times. It detects fluctuations occurring in the main power supply quickly and switches to the standby power supply. The control device only switches to the standby power supply after it has ensured that the standby supply is delivering the required power supply quality. The device switches back to the main power supply, taking into consideration the set parameters, once the required power supply quality is available again. If the standby power supply and/or the main power supply is fed by a generator, the control device also offers a wide range of settings, such as a generator lead time, generator delay time, and generator start test at specified times.

The 3KC ATC5300 transfer control device can control air circuit breakers, compact molded case circuit breakers, switch disconnectors and contactors. The circuit breakers are controlled via the related motorized operating mechanisms.

Setting parameters and monitoring using SENTRON ATC software

In addition to operation and parameterization on-site, you can also monitor and set the parameters of the controller using the SENTRON ATC software. The software offers a high level of convenience and quick access to all device settings, e.g. complex settings which occur when connecting generators.

Measurement quantity

The 3KC ATC5300 records and monitors the following measured quantities:

Measured quantity		Basic setting	Limit value setting	Delay time	Can be deactivated
Rated system voltage U_n	V AC	100 ... 690	70 % ... 98 % (75 % ... 100 %) [1]	0.1 s ... 900 s	--
			102 % ... 120 % (100 % ... 115 %) [1]	0.1 s ... 900 s	✓
Voltage asymmetry	%		1 % ... 20 %	0.1 s ... 900 s	✓
Phase failure	%		60 % ... 85 %	0.1 s ... 30 s	✓

3KC ATC5300 transfer control devices

Benefits

The advantages of the 3KC ATC5300 transfer control device at a glance:

- Controls compact molded case circuit breakers MCCB, air circuit breakers ACB, switch disconnectors LBS, or contactors
- Two measuring inputs for single-phase and multi-phase power supply systems
- Option for switching between system to system, generator to system, system to generator, and generator to generator configurations
- Direct measurement of three-phase industrial systems ranging up to 400 V AC_{L-N} or 690 V AC_{L-L} (converter costs, no assembly and installation costs for transformers)
- Has two voltage supply units to cover all standard AC/DC voltage supplies, alternative supply via main and standby system possible
- Low space requirements due to door installation and compact design
- Two displays for monitoring the normal/standby system and displaying the phase and interlinked cable voltages
- Setting control parameters for generator activation requirements
- Calendar clock
- 8 digital inputs, 6 of which are programmable and 7 relay outputs, 5 of which are programmable
- 4 selectable operating modes: off, manual, automatic, test
- Data, parameter and logged events (e. g. power failure, faults) remain accessible and unaltered even after a power failure or restarting a device
- Status display of the connected switches or contactors
- Logging and statistical processing of occurring events possible
- Easy system integration through integrated MODBUS interface (RTU and ASCII) for integrating e. g. into a power management system
- The illuminated LED display makes reading measured values and parameters easy, even under unfavorable lighting conditions
- The SENTRON ATC programming software saves considerable time when setting parameters and setting up the 3KC ATC5300 transfer control device
- Generator test run function for mandatory testing intervals
- Command option for switching to the second set of protection parameters in the ETU76B (air circuit breaker 3WL).

Integration

Implementation of an automatic transfer system

The 3KC ATC5300 transfer control device is used to automatically and manually switch from a main power supply to a standby power supply and vice versa. In case system faults occur, the 3KC ATC5300 controls the switching operations fully automatically. This ensures a very high level of operational continuity.

The 3KC ATC5300 transfer control device allows the implementation of an automatic transfer control unit in conjunction with compact molded case circuit breakers MCCB, air circuit breakers ACB, switch disconnectors LBS, or contactors.

The following devices are ideally matched to the 3KC ATC5300 transfer control device:

- 3VL molded case circuit breakers
- 3WL air circuit breakers

Component interaction

- Feed-in system line 1 (main system) and line 2 (standby system) are connected to the 3KC ATC5300 transfer control device.
- In case of system anomalies, the 3KC ATC5300 activates components Q1 and Q2 accordingly.
- Q1 and Q2 can be implemented with compact molded case circuit breakers MCCB, air circuit breakers ACB, switch disconnectors LBS, or contactors.

Q1 and Q2, configured with circuit breakers

All SENTRON circuit breakers connected to the 3KC ATC5300 transfer control device must be equipped with the following accessories:

- 3VL circuit breakers MCCB
  The following is also required for each MCCB:
  - One motor drive
  - One alarm switch
  - Two auxiliary switches 1 NO/1 NC
- 3WL air circuit breakers ACB
  The following is also required for each 3WL ACB:
  - One motor drive
  - One closing solenoid
  - One auxiliary release (shunt release)
  - Tripped signal switch
  - One auxiliary switch block 2 NO/2 NC (standard fittings)

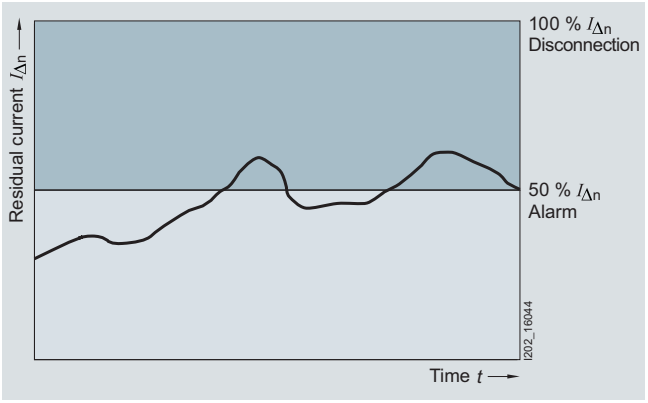
Overview

Plant safety and operating safety are becoming increasingly important alongside the protection of personnel. Shutdowns due to the unexpected tripping of protective devices cause high costs. It is possible to detect residual currents in the electrical installation before the protective device responds.

Residual current monitors (RCM) monitor residual current in electrical installations and issue a signal when the residual current exceeds a set value.

RCMs are used primarily in plants where a fault should result in a signal but not in disconnection. This enables plant operators to detect faults and eliminate their causes before the protective devices disconnect the installation, which increases plant and operating safety and cuts costs.

The summation current transformer detects all conductors required to conduct the current, i. e. including the neutral conductor where applicable. In a fault-free system, the magnetizing effects of the conductors through which current is flowing cancel each other out for the summation current transformer, i. e. the sum of all currents is zero. If a residual current is flowing due to an insulation fault, a residual magnetic field is left in the core of the transformer and produces a voltage. This voltage is evaluated using the electronics of the RCM. The switched contact can be used e. g. to operate an acoustic/optical signaling device, a higher-level control system or a circuit breaker.



Time characteristic of the rated residual current I_{Dn}

Benefits

- Higher plant availability and operating safety through permanent monitoring of residual currents
- Adjustable limit values for residual current and response time enable timely detection and signaling – plant shutdowns are often avoidable
- Devices for every application:
  The summation current transformers are available in various sizes, the RCMs can be used optionally for signaling and/or switching
- Additional fire protection can be implemented using the monitoring system.

Overview

Voltage relays are used for device and plant protection, supplying safety light devices and the detection of N-conductor breaks and short-time voltage interruptions.

They are available as undervoltage, overvoltage and under/overvoltage relays. The devices are equipped with different functions, depending on their intended use, and comply with the pertinent regulations.

Benefits

- Complete voltage protection in a compact design for overvoltage and undervoltage monitoring in a single device
- Plants and devices are reliably and easily protected by phase-failure relays
- Overvoltages and consequential damage due to high voltages are prevented through N-conductor monitoring
- Asymmetry monitoring in the voltage relay also protects three-phase AC motors against operation with voltage skew.

Overview

Current relays monitor single and three-phase systems for the flow of current, e.g. in emergency lighting installations, and the loading of motors. They are available as undercurrent, overcurrent and under/overcurrent relays.

Benefits

- Devices with an extremely broad range of applications of minimum 0.1 A to maximum 15 A without transformer
- Permanent overload capability up to 20 A or 30 A max. for up to 3 seconds, protect the function against uncontrolled plant states and increase plant availability
- Range changing enables the precise setting of current values through a high resolution
- Ultra compact current relays require only the smallest of spaces and save costs

Overview

In the mixed operation of electric hot water and electric storage heaters, the priority switch interrupts the charging procedure of the storage heater if hot water is required during the low-tariff time, thus limiting the connected load in compliance with BTO § 6. The control circuit terminals must be sealable.

Benefits

Reduction of the connection fee, which depends on the maximum load to be supplied (BTO, German Federal Regulation on Tariffs § 6 Section 4), when used in systems with continuous-flow heaters and electric storage heaters where the continuous-flow heaters are switched with priority.

5TT3 fuse monitors

Overview

Fuse monitors serve to monitor all types and versions of melting fuses that cannot be equipped with a fault signal contact. This enables integration in fault signaling circuits or a central alarm in order to improve plant availability.

Benefits

- Increase in plant availability, because fuse failures – which could cause considerable damage to the plant – are detected in plenty of time.
- A fuse failure is detected even if the load is switched off. This ensures the highest level of plant availability.

Overview

Phase monitors monitor the voltages in three-phase system and signal the power failure of one or more phases over a floating contact. Phase sequence monitors monitor the phase sequence in three-phase systems and signal any changes in the phase sequence – change of rotating field – over a floating changeover contact.

Benefits

- The three-phase LED display in the phase monitor and the LED display in the phase sequence monitors provide constant information on the switching state of the plant
- The compact design in 1 MW saves space.

5TT3 insulation monitors for industrial applications

Overview

Insulation monitors are used for protection of persons and against fire in non-grounded systems (IT systems). The insulation resistance of the system being monitored is measured against ground.

These types of measurements are specified according to DIN VDE 0100-410 – Power installations up to 1000 V – Protection against electric shock.

Technical specifications

			5TT3 470	5TT3 471
Power supply U_c		V AC V DC	220 ... 240 --	-- --

Overview

In areas that conform to Group 2 of DIN VDE 0100-710, any interruption to the examination and/or treatment of patients would place those patients at risk.

Limit monitoring

This is prevented through the use of changeover and monitoring units. These monitor the insulation resistance of the non-grounded IT system, the load current and the temperature of the transformer. If the limit value is exceeded, the insulation monitor gives out a warning signal.

Voltage monitoring

In addition, a special voltage relay monitors the voltage of the power supply and switches to a second power supply if it falls below the specified limit values.

Benefits

- TÜV-certified switchover device with increased functionality
- Plant state signal over contacts – No specific manufacturer's bus system
- Easy operation over potentiometers as the set limit value is always visible
- Easy to integrate in existing plants, including plants from other manufacturers.

			IT line transformer 4AT3/4AT4
In the case of isolating transformers used to set up medical IT systems, overcurrent protective devices are only permissible as protection against short circuits. To protect the isolating transformers against overload they are fitted with monitoring devices that signal an excessive rise in temperature (e. g. 7LQ3 354 insulation monitors).

5TT3 fault signaling units

Overview

Fault signaling units are used in small plants where the installation of complex fault signaling systems would be too labor-intensive and too expensive. In the event of a fault, they enable fast fault localization of all monitoring devices and limit monitors from a central location. This increases plant availability. With the correct sensor configuration, they also provide the option of preventative maintenance.

- 4 fault signal inputs with LED
- 1 LED as centralized fault indicator
- One unit each for centralized fault indication and acoustic signaling
- With acknowledgment for acoustic indicators
- Open-/closed-circuit principle to the 4 inputs can be adjusted via jumpers X1 - X2
- A maximum of 39 5TT3 461 expansion fault signaling units can be connected to the 5TT3 460 centralized fault signaling unit
- The maximum possible cable length between 5TT3 460 centralized fault signaling units and 5TT3 461 expansion fault signaling units is approx. 100 m with a conductor cross-section of 1.5 mm^2.

Benefits

- Ultra compact device designs that only require the smallest of spaces in distribution boards
- The modular design means that it is easy to add devices as your system expands.

Overview

EMERGENCY STOP circuits are common safety measures in all laboratory equipment and industrial plants. The EMERGENCY STOP modules used here must meet the most rigorous demands with regard to functional reliability. Benchmark is the degree of self-monitoring. The Directive 98/37/EC on Safety of Machines, valid from 2-31-1994, only specifies global safety standards. Details on how to implement individual safety demands are defined in standards, e. g. by the European Committee for Electrotechnical Standardization (CENELEC), which are based on international standards.

Benefits

- The electrical isolation between electric circuit and control meets the requirements of the standard
- An LED for the operating and switching state provides constant information on the operating state
- The safety category 4 to EN 954-1 expands the application options in many fields
- Compliance with the regulations according to EC Machine Directive 98/37/EC supports a high safety standard for those working in the plants.

5TT3 level relays

Overview

Level relays are used for the monitoring and control of conductive, non-combustible liquids and powders. They ensure overflow and dry run protection. Due to their sensor performance, the devices can also be used for general resistance monitoring.

LED displays:

- Green LED: lights up when operational voltage is applied
- Yellow LED: lights up if MIN output relay is activated
- Red LED: lights up if MAX output relay is activated.

Benefits

The measuring range up to 450 kΩ enables a differentiation between foam and liquid. It also increases the universal application for resistance measurements.

Due to its low-frequency, electrically isolated measuring circuit, the device has a high immunity to interference against system coupling, which enables cable lengths of up to 1500 m and suppresses the effects of electrolysis in the liquid

- The two outputs for minimum and maximum control can also be used for the advance warning and tripping of limit values
- 3 electrode connections for 1-step and 2-step level control
- All standard products can be used as electrodes
- High immunity to interference of the measuring circuit isolated from the system
- Programmable for open-circuit principle (with bridge X2 COM) or closed-circuit principle (without jumper)
- Separately adjustable delay times for $t_{v\,min}$ and $t_{v\,max}$, 0.2 s to 2 s.

5TT3 line circuit relays

Overview

Line circuit relays are used to interrupt circuits and prevent electromagnetic fields in circuits where there are currently no active loads.
If the loads are disconnected, and the line circuit relay measures a usage of only 2 to 20 VA - adjustable - it disconnects the cable to the supply voltage and switches over to extra-low voltage. As soon as loads are reconnected, the line circuit relay detects the increase in usage and switches back to the supply voltage.
While the line circuit relay switches off any unnecessary system components, it is not a device for ensuring isolation in the sense of safe disconnection.

The line circuit relay is unable to detect consumers with electronic power supply units, e. g. electronically controlled vacuum cleaners. It is expedient to connect such devices to a base load resistor (PTC resistor) so that the line circuit relay is reset to supply voltage.

Benefits

- High availability to a wide range of loads, as all resistive, capacitive and inductive loads are detected
- Adjustable from 2 VA to 20 VA
- With status display for contact adjustment
- With switch continuously ON
- With safety information on stickers for socket outlets and distribution boards.

Overview

Dusk switches are used for the demand-oriented switching of lighting installations for shop windows or paths in order to cut operating costs.
A light sensor measures the level of daylight. Switching depends on the desired brightness. A time delay and the switching hysteresis prevent clock-pulse behavior.
The sensor must be mounted so that it is not influenced by the lighting feedback.

Benefits

- The devices 7LQ2 101 and 7LQ2 103 have 2 switching channels that can be set independently of each other. This requires a light sensor
- 12 dusk switches can be switched parallel to a light sensor. This saves the multiple installation of light sensors in a single system and all dusk switches operate independently of each other and can be adjusted individually.

Overview

The temperature controllers are used for controlling or limiting temperatures in residential and non-residential buildings, as well as in industrial areas. They're used for heating registers, panel and hot air heating and direct floor heating, as a limiting thermostat for air-conditioning systems and cooling systems, control cabinet cooling, etc. as well as for temperature control in humid and dusty rooms. Can also be used for inaccessible room temperature setting for rooms in public buildings, such as schools, dayrooms and comparable applications.

Benefits

- Electronic temperature controllers with red/green LED for supply voltage indication, switching status indication and temperature sensor monitoring. This supports the monitoring of safe operation at all times
- The temperature sensor with the measuring element KTY or a PT100 is monitored for short circuits and interruptions. This protects against unpleasant surprises during operation.

Overview

The p.f. controllers monitor the phase displacement between current and voltage. Because the phase displacement angle changes with the load of the motor, this measurement method is ideal for the monitoring of asynchronous motors for underload and no-load operation, independent of size. However, in some cases, the p.f. barely changes if the load of the motor changes, e. g. in the case of relatively minor load changes on large-scale motors or single-phase split-pole motors or collector motors.

The p.f. controller monitors single and three-phase asynchronous motors up to approx. 5 A (without current transformer) for underload and no-load operation. This is phase-sequence-independent and increases plant availability. Typical applications are fan monitoring in the case of V-belt breakage, pump monitoring in the event of valve closure or dry runs. A current transformer is used for higher rated currents.

If the p.f. value set at the p.f. monitor is fallen below for the duration of the set response delay, the output relay switches to the alarm state and the red LED lights up. If it exceeds the p.f. value, the output relay switches back without any significant delay.

- Adjustable p.f. response value, from 0 to 0.97
- Current range up to 8 A
- LED display for operation and alarm
- Automatic resetting of alarm.

Benefits

- The ultra compact p.f. controller requires only the smallest of spaces and saves costs.

5TT3 motor protection relays

Overview

Thermistor motor protection relays monitor the thermistors wound in motors. This helps prevent thermal motor overloads, e. g. due to high switching frequency, single-phasing, disabled cooling or excessive ambient temperatures. Up to 6 thermistors in series can be monitored. A conductor break in the sensor conductor will immediately trip the device. The device can also be used for monitoring wound quick-break switches - e. g. bimetal thermostats. This offers all-round motor protection.

- For the detection of
  - Temperature limits being exceeded
  - Wire breaks in sensor circuits
- 1 input for 1 to 6 thermistors
- With 2 LEDs green/red for ready-to-run and fault
- Response value: 3.2 to 3.8 kΩ
- Release value: 1.5 to 1.8 kΩ
- Max. cable length of sensor supply cable NYM 2 × 1.5 is 100 m
- Remote Reset: over A1/A2 (NC contact) or over X1/X2 (NO contact)

LED displays:

- Green LED: lights up when operational voltage is applied
- Red LED: lights up in the event of overtemperatures or an interruption in the sensor circuit.

Benefits

- The test button for the diagnosis of the devices ensures high functional reliability for users
- The ultra compact thermistor motor protection relay requires only the smallest of spaces. This saves costs
- A remote reset enables the device to be switched back on again centrally at any time. This increases plant availability.

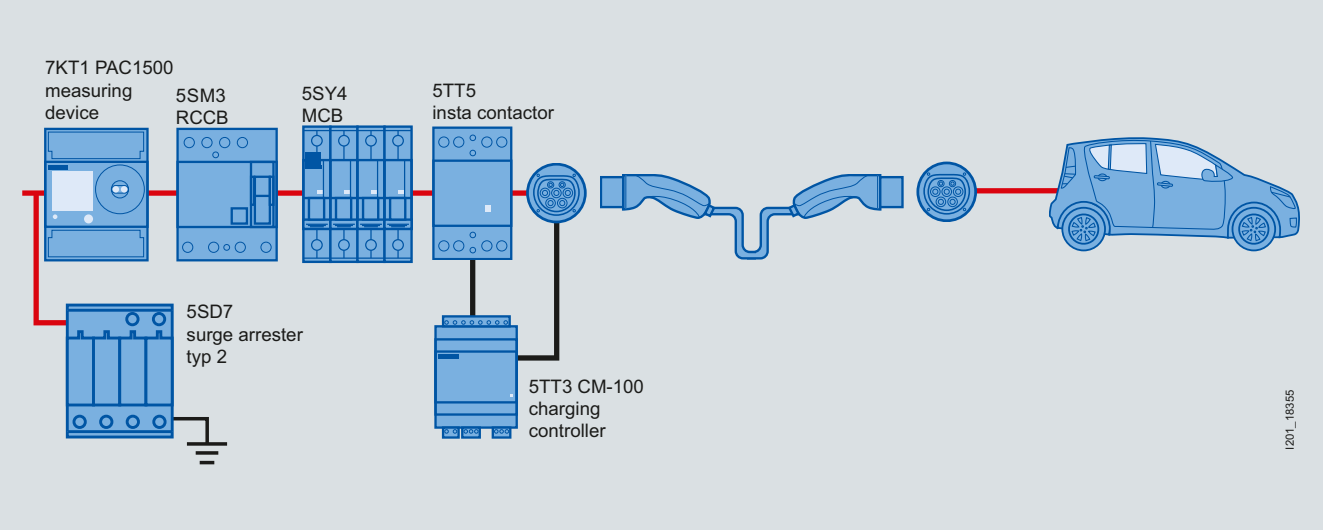
NEW

CM-100 charging controller acc. to IEC 61851

Overview

IEC 61851 describes the safety requirements which must be met by conductive charging systems for electric vehicles. Standard-compliant AC charging in operating mode 3 requires the SIPLUS ECC1000 CM-100 charging controller, which is permanently installed in a charging station in order to communicate with the electric vehicle via the charging cable. It identifies whether the correct charging cable is connected. If yes, the plug interlock will be activated and a feedback signal sent to the charging controller. A further enable signal, e. g. via a key-operated switch, actuates the 5TT5 Insta contactor for the charging current circuit and the charging operation can start.



Dimension drawings and terminal connection plans can be found in the Service & Support Portal at:
www.siemens.com/lowvoltage/support

CM-230 charging controller acc. to IEC 61851

Overview

CM-230 stand-alone version

This charging controller with Ethernet connection is used for home and public charging applications.

A web interface lets you change the parameters of the controller and call up information on the current status of the charging operation.

CM-230 managed version

This charging controller with Ethernet connection is used for complex public charging applications. The controller is typically used as a remote I/O module in combination with further charging controllers that are integrated via Ethernet in a higher-level control system. The managed version offers system integrators/operators greater flexibility, such as the individual control of free I/O modules.

A function block (FB) is available for connecting to SIMATIC control systems.

Technical specifications

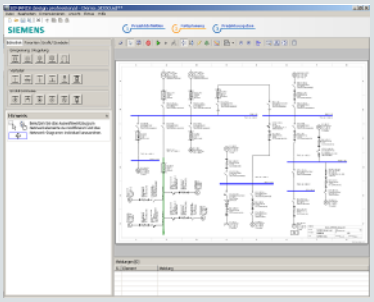
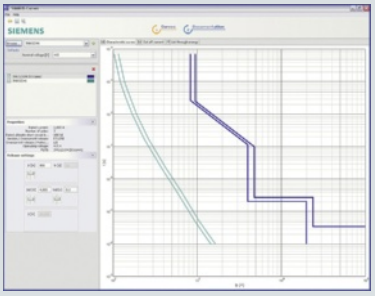
General data

Overview





SIMARIS design

Software tool for quick and effective network calculations and the dimensioning of power distribution for non-residential and industrial buildings from medium voltage supply to the load:

- Dimensioning of electrical networks on the basis of real products according to acknowledged rules of technology and applicable standards (VDE, IEC)
- Automatic selection of the appropriate components from the integrated product database
- Possibility of storing frequently used modules in the favorites library
- High planning reliability combined with flexibility in the planning and realization process
- Possibility of automatic selectivity evaluation with the professional version: in addition to the time/current characteristic curve and the respective envelope curves, selectivity limits are automatically displayed

SIMARIS project

Software tool for fast calculation of space requirements and electrical power distribution budgets for non-residential and industrial buildings, and for preparing specifications:

- Automatic selection and placement of the appropriate systems based on the parameters entered
- Fast overview of space requirements and budget
- Thorough planning from the medium voltage supply to the distribution board
- Easy adaptation of project planning possible not only at the time of implementation, but also in the event of changes in use or expansions
- Storing of planned systems in the favorites library for further use in similar projects
- Automatic generation of specifications for the planned systems

SIMARIS curves

Software tool for visualizing and evaluating characteristic curves of low-voltage protection equipment and fuses (IEC), including the possibility of simulating instrument settings:

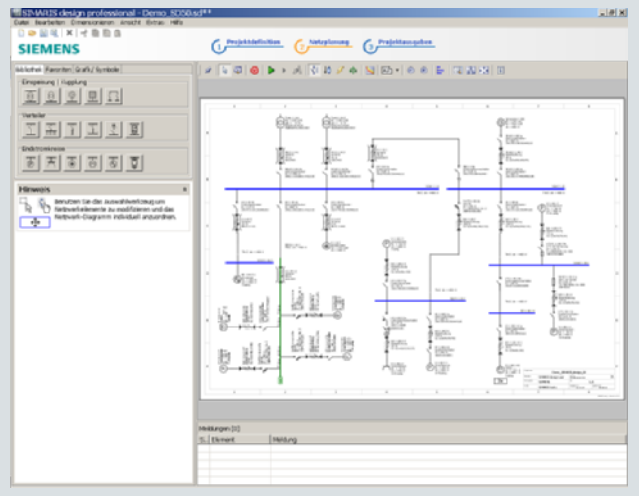
- Visualization of tripping characteristics and let-through current and let-through power characteristics
- Device selection via order number or by entering known technical specifications using the selection aid
- Storing of frequently used devices as favorites
- Saving of several characteristic curves including selected settings as a complete project

More information about SIMARIS

You can find more information and downloads on the Internet at:

www.siemens.com/simaris

Overview



SIMARIS design is a software tool for quick, effective network calculations and dimensioning of electrical power distribution for non-residential and industrial buildings.

As early as the planning phase, the complete circuit required for the project to be handled can be structured and dimensioned on the basis of real products. The network structure is first assembled from the stored modules for feeder units, couplings, distribution boards and branch circuits. It is also possible to re-use stored favorites, such as those developed in previous, similar projects. Exactly the right components and distribution systems for the case in question are then selected automatically from the product database stored in SIMARIS design, based on the parameters and technical specifications selected specifically for the project. This avoids any additional costs which might be generated by uncoordinated systems in the implementation phase before they are incurred.

Every time an electrical power distribution system is configured, changes and the adaptations they require occur in both the planning and the implementation phases. SIMARIS design makes it easy to incorporate such changes into the supply concept and automatically check its reliability with regard to the acknowledged rules of technology and the standards currently applicable.

Even an analysis of selectivity, which is essential for safety power supply elements for example, can be carried out easily with SIMARIS design professional, a program version with additional useful functions which is available for a fee.

The wide range of output options allow the project structure and the data gathered to be documented precisely in each phase of the project.

Benefits

- Reduction in workloads for projects
- Dimensioning of electrical networks on the basis of real products according to acknowledged rules of technology and applicable standards (VDE, IEC)
- Automatic selection of the appropriate components from the integrated product database, from the medium voltage supply to connection of loads, so no detailed knowledge of products and systems is required
- Calculation of short-circuit current, load flow, voltage drop and energy balance
- Provision for the necessary personal, short-circuit and overload protection
- Possibility of providing for the necessary lightning and overvoltage protection
- Displaying and dimensioning of the cables and busbar trunking systems for power conveyance and distribution
- High planning reliability combined with flexibility in the planning and realization process
- Changes can be tracked by means of a change index
- Easy adaptation in the event of changes in use or expansion
- Possibility of storing frequently used modules in the favorites library
- Output of the network plan developed, together with detailed parts and data lists
- Country-specific product ranges taken into account
- Comprehensive documentation of planning results with simple data transfer (Office, CAD etc.)

Application

SIMARIS design is suitable for network calculations and dimensioning of electric power distribution systems in all non-residential and industrial buildings. Whether you are planning a shopping mall, a hospital or a production building, with SIMARIS design it is possible to considerably reduce the amount of work required for the overall planning of power distribution systems and hence the time spent on selecting and dimensioning the necessary equipment.

You can find more information and downloads on the Internet at:

www.siemens.com/simarisdesign

SIMARIS project

Overview

SIMARIS project is a software tool for fast calculation of space requirements and electrical power distribution budgets for non-residential and industrial buildings, and for generating specifications automatically.

The following is determined in SIMARIS project based on the pre-defined project structure and the basic technical specifications selected:

- For medium-voltage switchboards: selection of the required system and the required fields, then presentation of a front view with dimensions.
- For transformers: selection of the required system and then the required quantity. Selected transformers are presented as a parts list.
- For low-voltage switchboards and distribution boards: selection of the required protection devices and switching devices per system. The most suitable distribution system is determined automatically based on the list of distribution devices thus created, is equipped with the devices and presented graphically in an automatically generated front view including dimensions.
- For busbar trunking systems: selection of the required system, then specification of the length and selection of the additionally required components, e. g. infeeds, junction units and tap-off units. All the resulting components are listed in a parts list.

Detailed information about Siemens units or their order numbers are not needed because SIMARIS project makes the selection automatically on the basis of the parameters entered. For each item of switchboard or each distribution, SIMARIS project takes the wiring, control and measurement etc. into account.

A system plan drawn up professionally in SIMARIS design can also be imported into SIMARIS project, which means that selecting devices becomes redundant and SIMARIS builds up the project structure automatically.

Convenient output variants are available to document the results, including the automatic generation of specifications for the planned systems.

Typical versions of a system planned with SIMARIS project can be saved and imported continually into new projects from the favorites library. Automatically created systems can also be subsequently optimized or changed. This is particularly relevant if planning becomes more detailed and the budget needs to be reinforced as a result.

For detailed calculation of costs - on an up-to-date and regional basis - and for more project support please contact your Siemens representative.

Benefits

- Intuitive and easy to operate
- Automatic selection and placement of matching distribution systems
- Fast calculation of space requirements and budget for electrical power distribution systems
- Seamless planning, from the medium-voltage switchboard through transformers, low-voltage switchboards and busbar trunking systems to the distribution boards
- Easy adaptation of planning as requirements become more concrete in the course of a project, and also in the event of changes in use or expansion of the systems
- Saving planned systems for similar projects individually in the favorites library and importing them from there into new projects
- Convenient output types for documentation purposes, such as graphic views, lists and specifications
- Importing of a project drawn up in SIMARIS design 6.0 professional

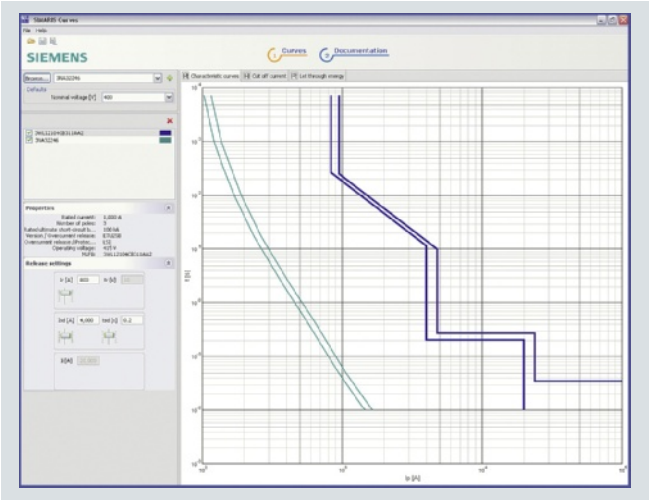
Application

SIMARIS project is suitable for quickly establishing space requirements and budget, and for preparing specifications for electrical power distribution systems in non-residential and industrial buildings. From shopping centers to hospitals and production buildings – with SIMARIS project it is possible to considerably reduce the amount of work required for the overall planning of power distribution systems and hence the time spent on selecting and dimensioning the necessary equipment.

More information

You can find more information and downloads on the Internet at:
www.siemens.com/simarisproject

Overview



SIMARIS curves is a software tool for visualizing and evaluating characteristic curves of Siemens low-voltage protection equipment and fuses (IEC) quickly and easily, including the possibility of simulating instrument settings.

With SIMARIS curves it is possible to simulate parameter settings on protective devices. The respective characteristic curve is selected by direct entry of the Siemens order number, or with the aid of a user-friendly selection tool by entering known technical specifications. Individual products with default attributes can be stored as favorites and called up again.

In addition to simply displaying tripping characteristics with tolerance ranges, it is also possible to simulate parameter settings for the subsequent setting of the devices. In addition, the associated let-through current and let-through power characteristics can be displayed. A printout summary documents the characteristic curves selected and each of their settings.

Benefits

- Visualization and evaluation of tripping characteristics of low-voltage protection equipment and fuses (IEC), including the possibility of simulating instrument settings
- Visualization of let-through current and let-through power characteristics
- Clear product selection using order numbers or with the aid of technical specifications in the selection tool
- Saving of selected devices as favorites
- Saving of several characteristic curves including settings as complete project
- Country-specific product ranges taken into account
- User-friendly documentation.

Application

SIMARIS curves is suitable for displaying tripping characteristics, let-through current and let-through power characteristics of Siemens low-voltage controls and fuses.

From shopping malls through hospitals to production shops – SIMARIS curves lets you call up the devices required and their characteristic curves quickly and documents them accordingly.

You can find more information and downloads on the Internet at:

www.siemens.com/simariscurves

General data

Overview

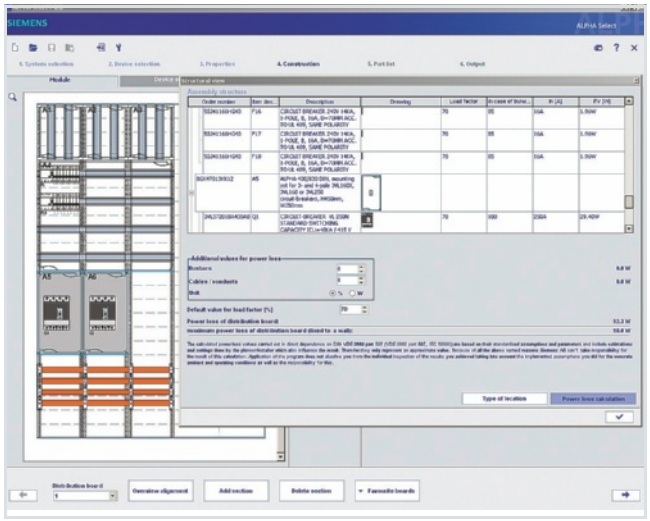
ALPHA SELECT software assists installation engineers, control cabinet engineers, electrical wholesalers and planners in the planning and configuration of distribution boards and meter cabinets. Easy-to-use, intuitive functions guide you step-by-step through the entire project, from planning to installation. ALPHA SELECT prevents configuration errors by means of collision checks and configuration rules stored in the program.

ALPHA SELECT comprises:
- ALPHA SIMBOX small distribution boards
- ALPHA 400-ZS meter cabinets
- ALPHA distribution boards
- ALPHA 8HP molded-plastic distribution systems
- ALPHA BOX IEC wall-mounted distribution boards

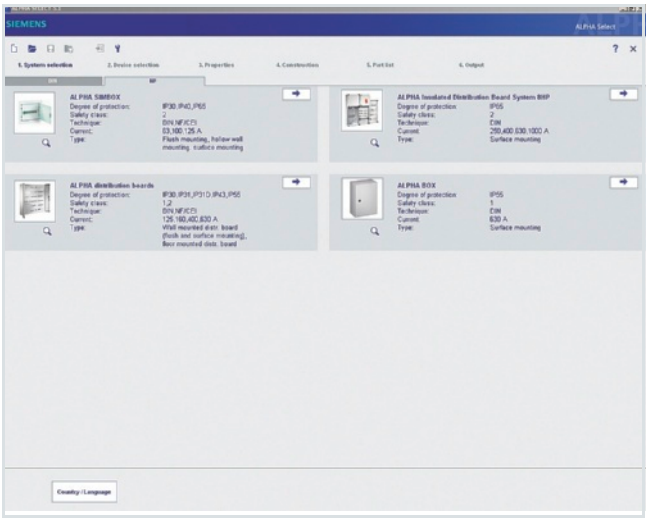
In addition, BETA low-voltage circuit protection products, GAMMA *instabus* products (for building management) and many other items from the Siemens Industry product selection are available in electronic catalogs (EGH selection catalog and CA 01).

More information

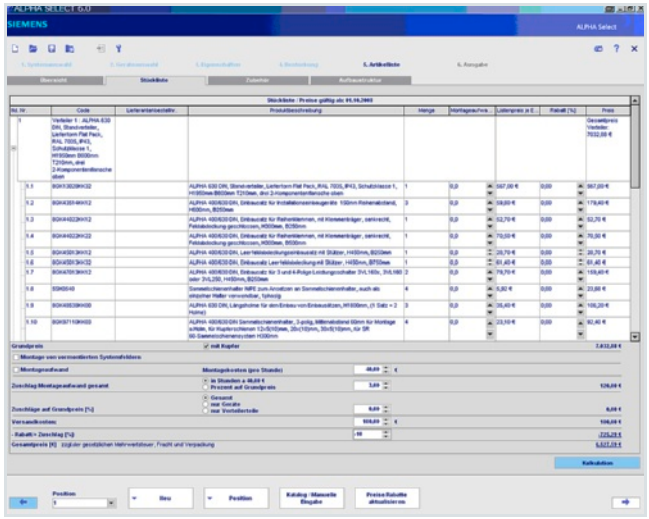
For further information, please visit our Web site at
www.siemens.com/alpha-select
Support for planning and configuration is available from:
www.siemens.com/lowvoltage/technical-support
Tel.:+49 (911) 895-7222



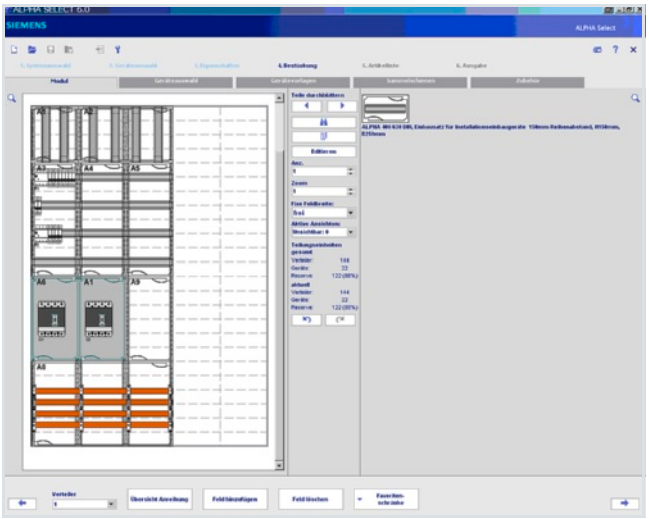
Calculation of power loss



Selection of the ALPHA distribution system



Parts list with calculation



Distribution board equipment, front view

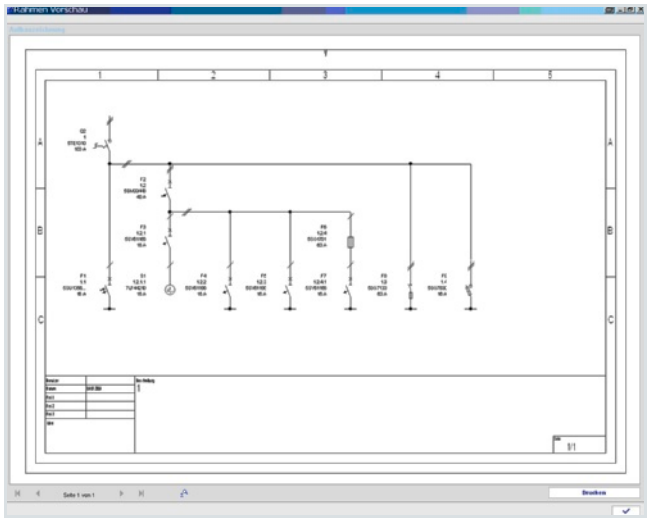


Illustration of the device structure as single-pole circuit diagram

Start with the selection of a suitable distribution system and distribution board by selecting the required degree of protection, safety class and dimensions. You can then just drag & drop the required assembly kits, devices and accessories of your choice. Essential accessories are determined automatically. When selecting the devices, customer specifications can be prepared using either item numbers or in accordance with the electrical structure. In case 2 a graphical representation in the form of a 1-pole circuit diagram has been available since the launch of Version 6.0.

The graphic representation of the structure enables individual levels, such as doors, covers, equipment racks or devices, to be visualized, rendered transparent and hidden in order to provide users with a constant overview of already configured components.

There is also an integrated option for power loss calculation which enables comparison of the calculated power loss values of the devices installed in the distribution board with the thermal rating of the distribution board, giving due consideration to the point of installation and the permissible overtemperature (related to 35 °C ambient temperature).

Frequently required components can be saved as favorites for integration in other projects at any time.

Used in conjunction with existing calculation aids, users are able to tailor parts lists, assembly drawings and assembly structures to individual requirements and output as both a hard copy and in electronic form.

In addition to planning and calculation in the program, users are also able to produce parts lists and graphic documentation to accompany customer quotations or for ordering the required components.

The workshop version, which comprises a structured list of the distribution boards and the respectively installed parts and graphical representation of the different user-defined layers, directly supports the building of distribution boards configured using ALPHA SELECT.

www.siemens.com/alpha-select

Benefits

- Cabinet selection: simple selection of cabinet system, degree of protection, safety class and dimensions
- Selection of equipment using technical specifications
- Alternative structuring of the devices according to
  - Electrical structure and graphic output as 1-pole circuit diagram
  - Item numbers in the customer specifications
- Positioning of assembly kits and devices using drag & drop
- Automatic determination of key accessories
- Numbering of assembly kits in the assembly drawing
- Automatic issue of item codes for devices
- Calculation of power loss
- Differentiated calculation options, including allowance made for assembly work
- Listing in the assembly structure of devices placed in the assembly kits, including numbering of the assembly kits and the item codes of the devices
- Easy drawing up of quotations for projects: Clearly arranged output selection for parts lists, assembly drawing and assembly structure
- Clearly arranged calculation aids. Calculations for individual items and assembly, for material surcharges, shipment costs, discounts and miscellaneous extras are easy to perform in the parts list. Standard discounts for each price group can also be saved in the memory.
- Option for quotations with individual company logo
- Update over the web with quick download times
- Manual available as a download

Application

System requirements

- Processor: from 1 GHz
- Main memory: minimum 512 MB
- Operating system: Windows 7/VISTA/XP/2000
- Free hard disk space: 100 ... 500 MB (depending on the number of modules installed)
- Display resolution: minimum 1024×768 with 16-bit color intensity

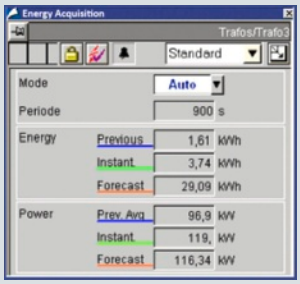
More information

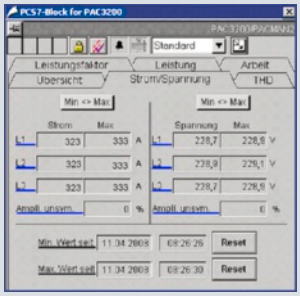
Support for planning and configuration is available from:

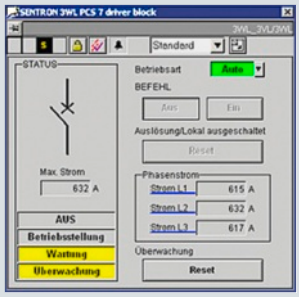
www.siemens.com/lowvoltage/technical-support

and by calling: +49 (911) 895-7222

Overview







SIMATIC powerrate

SIMATIC WinCC powerrate is an add-on to PCS 7 and WinCC which throws light on power consumption from the infeed to the load:

- Identification of power-intensive consumer devices and processes in order to introduce measures for improving power efficiency
- Comparison of consumption profiles for greater efficiency of process design
- Optimizing the company according to energy parameters based on an assessment of consumption and costs
- Complying with the contractually agreed power limit, thus preventing higher power supply costs or penalty payments.

SIMATIC PCS 7 Library PAC3200, PAC3200 block library for SIMATIC WinCC

The function block libraries enable the seamless integration of the 7KM PAC3200 power monitoring device into the PSC 7 process world or into WinCC.

3WL/3VL block library for SIMATIC PCS 7

The 3WL/3VL block library enables the seamless integration of the 3WL/3VL circuit breaker in the PSC 7 process world.

Overview

SIMATIC powerrate is an add-on to PCS 7 and WinCC which throws light on power consumption from the infeed to the load. Power data are continuously collected, archived and processed further. With an exact knowledge of the consumption profile, it is possible to identify savings potential, optimize your power supply conditions and hence, lower your power costs. Monitoring the contractually agreed power limit helps on the one hand to prevent unnecessarily high power prices or penalties and on the other hand to make full use of the fixed power limit.

Batch-related consumption recording enables the exact recording and evaluation of power consumption per batch.

The integration of switches through digital inputs/outputs enables the monitoring or indication of switch status and, with suitable authorization, remote switching. If connection is through DPV1 or PROFINET selected measured values and messages from the 7KM PAC3200 and PAC4200 power monitoring devices can be displayed online.

Data recorded and archived by SIMATIC powerrate can be exported to Excel and presented in various reports.

Support for the WinCC Web Navigator means that the SIMATIC powerrate functionality is also available over the web.

Full integration in PCS 7 and WinCC makes it easy to use standard interfaces or standard functionalities from PCS 7 or WinCC.

Components

SIMATIC powerrate is made up of the following components:

- Function blocks for the acquisition and processing of power data
- Faceplates for the presentation and processing of power data
- Components for implementing load management (calculating trends, monitoring limits, enabling/disabling loads)
- Function blocks for batch-related consumption recording
- Function blocks for the integration of measuring devices and switches
- Other components, for example, for time synchronization, data buffering or data exchange with archives
- Faceplates for presenting results and for entering values (e. g. for configuration or from manual measured values)
- Excel-based reports for allocating power data to cost centers, for batch-related evaluation and for determining and presenting the duration curve
- Exporting data to Excel

System requirements

The SIMATIC powerrate library is released for the following PCS 7 versions:

- SIMATIC PCS 7 V7.1 SP2
- SIMATIC PCS 7 V7.1 SP1
- SIMATIC PCS 7 V7.1

The library is released for the following WinCC version with the associated STEP 7 versions:

- SIMATIC WinCC V7.0 SP2

SIMATIC powerrate

Benefits

- Identification of power-intensive consumer devices and processes in order to introduce measures for improving power efficiency
- Comparison of consumption profiles for greater efficiency of process design
- Optimizing the company according to energy parameters based on an assessment of consumption and costs
- Complying with the contractually agreed power limit, thus preventing higher power supply costs or penalty payments
- Integration of the 7KM PAC3200 and PAC4200 power monitoring devices with a quick overview of selected measured values and signals
- Integration of switches with an overview of switch status and switching possibilities
- Exact assignment and comparison of the consumption data of certain work processes through batch-related consumption recording

Application

SIMATIC powerrate is used in all areas in which PCS 7 or WinCC is used and energy efficiency considerations play a major role. Full integration into PCS 7 or WinCC means that there is no need for a special system environment. Predefined modules and symbols give you the assurance of building on tested and certified product components, with interfaces which enable customized expandability.

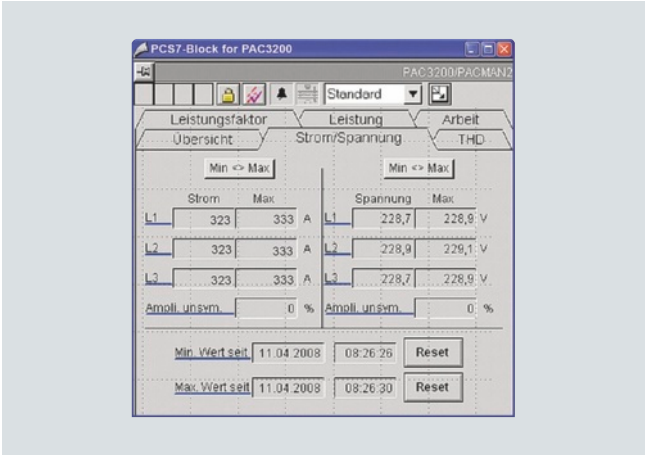
Overview



The PCS 7 block library - SIMATIC PCS 7 Library PAC3200 - for the 7KM PAC3200 power monitoring device enables the seamless integration of the power monitoring device into the PCS 7 process world.

It comprises one driver block, one diagnostics block and the faceplates. The blocks in the SIMATIC S7 supply energy data to the faceplates in the user interface of the process control system, generate signals and guarantee connection to the maintenance system of PCS 7.

Faceplates

Faceplates serve as a user interface for operating and monitoring and enable technologically important values and functions of the 7KM PAC3200 power monitoring device to be displayed and performed as a PCS 7 object.

Both between the faceplates and the function blocks and between the function blocks and the 7KM PAC3200 power monitoring device, there are bidirectional communication connections on the system side that support the display of values in the faceplates and the forwarding of input data to the device.

This transforms the 7KM PAC3200 power monitoring device into an integral component of PCS 7.

The operating systems supported are the same as those for SIMATIC PCS 7.

Benefits

- Full integration of 7KM PAC3200 power monitoring device in the PCS 7 process control system through PROFIBUS DPV1 using a certified PCS 7 add-on module
- Reading out and displaying device data
- Inputting limit values for monitoring through the driver block
- Resetting values on the device (min/max values)

Application

SIMATIC PCS 7 Library PAC3200 is used in all areas in which PCS 7 is used. Full integration in PCS 7 means that there is no need for a special system environment. Predefined modules and symbols give you the assurance of building on tested and certified product components.

For challenging measurements the 7KM PAC4200 can also be used in the functional scope of the PAC3200.

In addition to the cyclic connection, there is also an acyclic connection for pure visualization tasks. The process image of the SIMATIC CPUs can be used more efficiently with the acyclic connection.

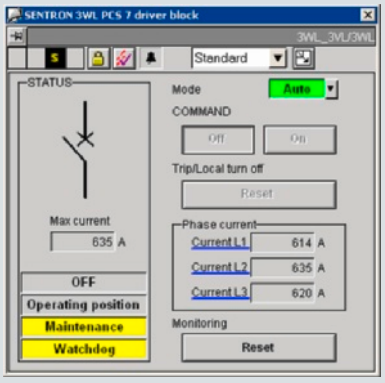
3WL/3VL block library for SIMATIC PCS 7

Overview



The PCS 7 3WL/3VL block library enables the simple and seamless integration of the 3WL/3VL circuit breaker into the PSC 7 process world.

It comprises one driver block, one diagnostics block and the faceplates. The blocks in the SIMATIC S7 supply current, power and energy data to the faceplates in the user interface of the process control system, generate signals and guarantee connection to the maintenance system of PCS 7.

Faceplates

Faceplates serve as a user interface for operating and monitoring and make it easy for the circuit breaker to be displayed and operated as a PCS 7 object.

The 3WL/3VL block library for SIMATIC PCS 7 provides for continual plant transparency. Critical plant states are recognized quickly and costs owing to outages avoided. System availability is permanently increased.

This transforms the circuit breaker into an integral component of PCS 7.

The operating systems supported are the same as those for the SIMATIC PCS 7.

Benefits

- Full integration of the 3WL/3VL circuit breaker into the PCS 7 process control system through PROFIBUS DPV1 using a certified PCS 7 add-on module
- Remote switching and monitoring
- Reading out of maintenance information
- Automatic information in case of overload, short-circuit and faults
- Reading out and displaying device data
- Limit monitoring through the driver block
- Resetting values on the device (min/max values)

Application

The 3WL/3VL function block for SIMATIC PCS 7 is used in all areas in which PCS 7 is used. Full integration in PCS 7 means that there is no need for a special system environment. Predefined modules and symbols give you the assurance of building on tested and certified product components.

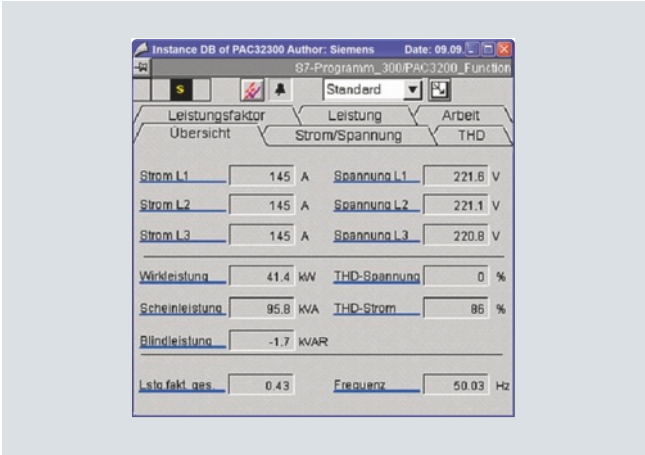
Overview



The PAC3200 block library for SIMATIC WinCC enables the seamless integration of the 7KM PAC3200 power monitoring device into WinCC.

It comprises one driver block, one diagnostics block and the faceplates. The blocks in the SIMATIC S7 supply energy data to the faceplates in the user interface of WinCC, generate signals and guarantee connection to the maintenance system of WinCC.

Faceplates

Faceplates serve as a user interface for operating and monitoring and enable technologically important values and functions of the 7KM PAC3200 power monitoring device to be displayed and performed in WinCC.

Both between the faceplates and the function blocks and between the function blocks and the 7KM PAC3200 power monitoring device, there are bidirectional communication connections on the system side that support the display of values in the faceplates and the forwarding of input data to the device.

This makes the 7KM PAC3200 power monitoring device an integral component of WinCC.

System requirements

The PAC3200 block library for SIMATIC WinCC is released for

- WinCC V 7.0
- WinCC V 7.0 SP2

WinCC options AS-OS Engineering and Basic Process Control must be installed. The block library is available for S7-300, S7-400 and WiNAC RTX.

At least one S7 CPU317-2DP is required for use in the S7-300 area. At least one S7 CPU414-2 is required for use in the S7-400 area.

Supported operating systems are the same as for SIMATIC WinCC.

Benefits

- Full integration of the 7KM PAC3200 power monitoring device in SIMATIC WinCC through PROFIBUS DPV1. The block library is a certified WinCC add-on module.
- Reading out and displaying device data
- Inputting limit values for monitoring through the driver block
- Resetting values on the device (min/max values)

Application

The PAC3200 block library for SIMATIC WinCC is used in all areas in which WinCC is used. Predefined function blocks and symbols give you the assurance of building on tested and certified product components.

For challenging measurements the 7KM PAC4200 can also be used in the functional scope of the PAC3200.

In addition to the cyclic connection, there is also an acyclic connection for pure visualization tasks. The process image of the SIMATIC CPUs can be used more efficiently with the acyclic connection.

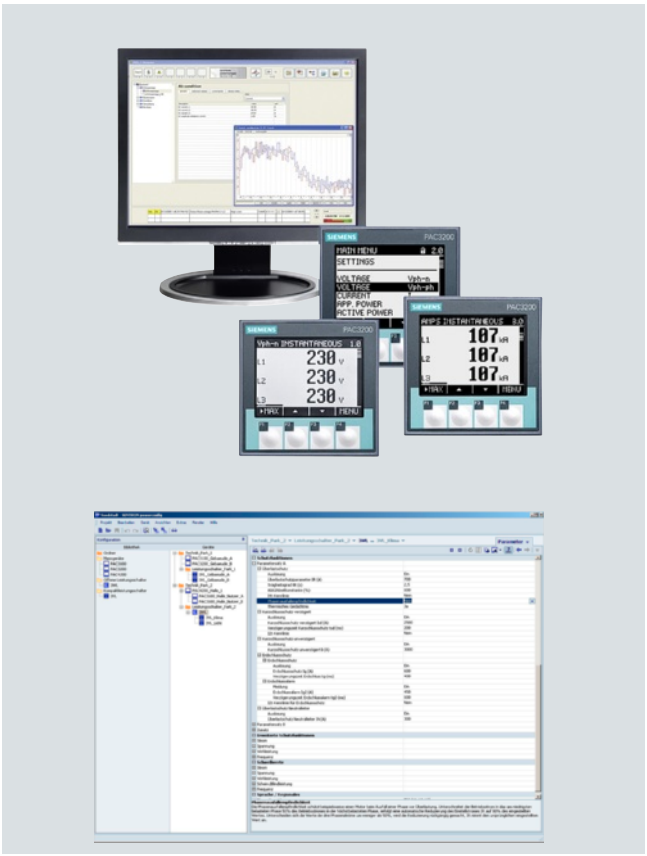
General data

Overview



powermanager

Power management software for the SENTRON-based power management system with the following main points:

- to identify savings potential
- to reduce power costs
- to ensure power availability

powerconfig

Commissioning and service tool for communication-capable SENTRON measuring devices and circuit breakers with following main points:

- Makes the parameterization of the devices easier, which gives rise to a considerable time saving, particularly when several devices have to be set up.
- With powerconfig the 3WL and 3VL circuit breakers and the 7KM PAC3100 / PAC3200 / PAC4200 power monitoring devices can be parameterized, documented, operated and monitored using various communication interfaces.

Overview

Components of the PC-based power management system

User interface of powermanager

Power management system with the SENTRON product family

The SENTRON product family offers the user not only power management software in the form of SENTRON powermanager but also the corresponding hardware in the form of 7KM PAC measuring devices and 3WL/3VL circuit breakers for the realization of a complete power management system.

The components are optimally coordinated with each other. For example, special drivers for the SENTRON devices are integrated in the powermanager software so that on the one hand the power data acquisition can take place without any great configuration effort and, on the other hand, the most important measured values or states are indicated by predefined displays.

This reduces the engineering work for the customer and gives the user the assurance of knowing that the device functions are optimally supported in the software.

Features of powermanager

The power management software powermanager is at the heart of the PC-based power management system and

- is an independent power management software.
- can be operated using a PC and measuring devices with Ethernet connection.
- is expandable from the simple standard application to a fully flexible customer solution.
- is fully scalable with regard to the number of devices and to the software's functions.
- ensures the optimum integration of measuring devices from the 7KM PAC range, 3WL/3VL circuit breakers and other devices.

Standard package and options packs

Even in the standard package powermanager covers the normal requirements. With this package the user receives easy-to-operate power management software which enables the data detected by the measuring devices to be read out, presented, archived and processed in basic evaluations.

With the "Expert" option pack the user receives full flexibility for the presentation of graphic interfaces (e. g. single line presentations) in order to integrate his own images and devices.

With the "Web" option pack, data/images can be presented using a web browser.

With the "Distributed Systems" option pack it is possible to connect several distributed powermanager servers to form one complete system. This means, firstly, that distributed sites can be managed from a single location and, secondly, that the number of usable devices can thus be increased.

The system is, of course, expandable to the extent that it allows the customer to begin with the basic functionality of the powermanager and add the "Expert" option pack at a later date. Existing data and configurations can still be used after upgrading.

Benefits

- Transparency of power flows
- Exact knowledge of the consumption profile
- Increase of power efficiency
- Optimization of power supply contracts
- Compliance with contractual terms
- Assignment of power costs to cost centers
- Optimization of plant maintenance
- Identification of critical plant conditions

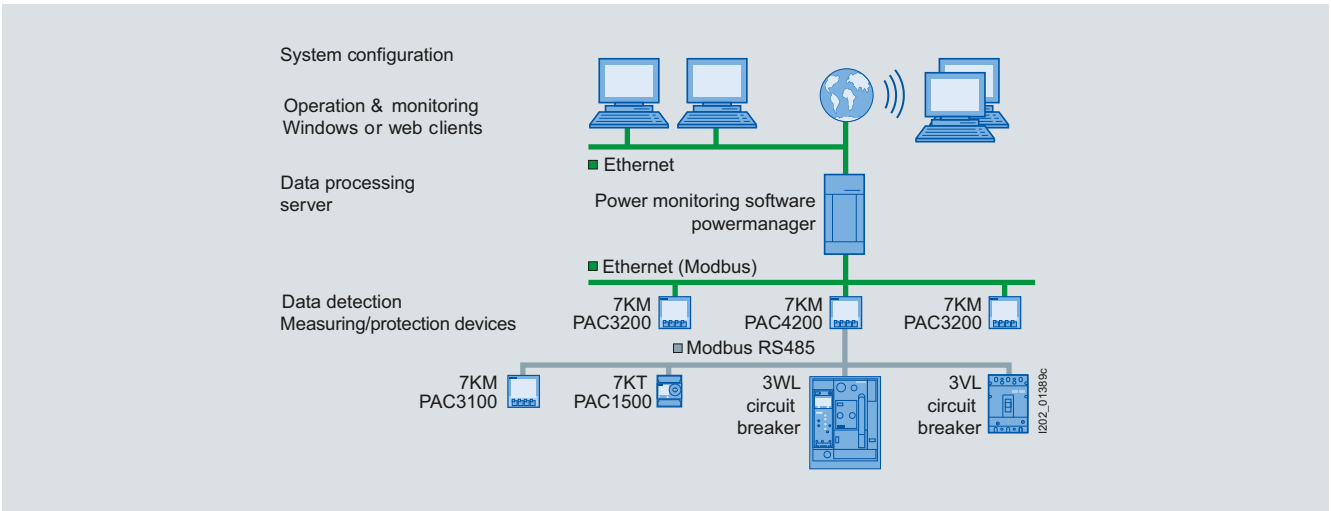
Application

Applications

The product offers a standard power management solution which provides the user with the following basic functionality:

- Collection of measured quantities from the devices
- Presentation of the measured quantities from the devices in table form in a predefined standard view for 7KM PAC3100, PAC3200 and PAC4200 power monitoring devices and 3WL/3VL circuit breakers
- Free presentation of measured quantities possible, including from non-Siemens devices using generic Modbus drivers
- Archiving of measured quantities
- Monitoring of status and limits, with generation of corresponding signals
- Reserve curve display for visualizing the achieved data and online data
- Cost center reports based on predefined rates and the archived consumption data
- OPC server
- Configuration of the system including user management

This standard solution is designed with cost-efficiency and simple system start-up in mind.



System configuration

- Integration of measuring devices by means of predefined device templates for the 7KM PAC family and the 3WL/3VL circuit breakers
- Easy integration of existing modbus-capable detecting devices
- Communication through Standard Ethernet
- Integration of devices with RS485 interface (ModbusRTU) through Modbus gateway, e. g. the 7KM PAC4200 can be used as gateway

Industries

Energy efficiency thanks to power management with consistent monitoring and the resulting optimization measures is important for all industries, e. g. in the manufacturing industry, in non-residential buildings, in the field of services, and in infrastructure projects. This has a particular impact on competitiveness, particularly in view of rising energy prices.

System requirements

Hardware requirements

- Processor: Intel Pentium IV 2.8 GHz (or higher)
- RAM: at least 2 GB
- Hard disk: at least 1 GB free
- Graphics: VGA with at least 1280 x 1024 pixels and 16-bit color intensity

Supported operating systems

- Windows Vista: Business, Ultimate; SP1
- Windows XP: XP with SP2/SP3
- Windows 2003: Server 2003 Server (32-bit)

Supported Excel versions (required for reporting)

Excel 2000, Excel XP, Excel 2003, Excel 2007

Selection and ordering data

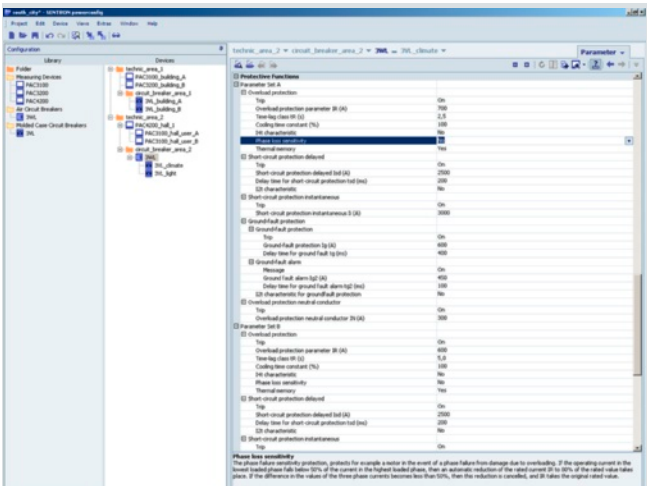
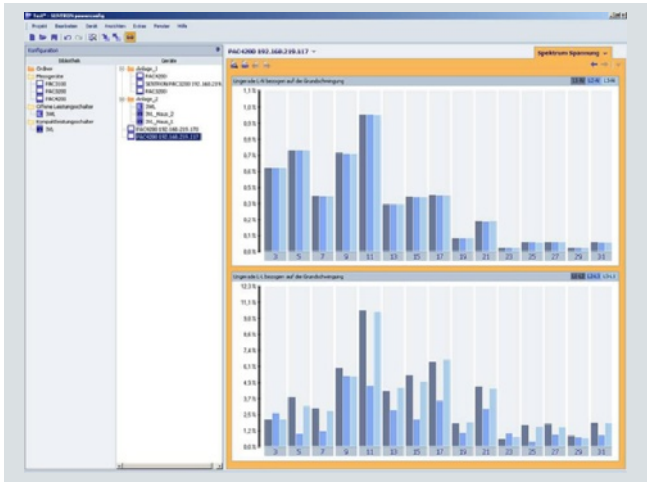
powerconfig

Overview



Setting the parameters of a SENTRON device



Display of current measured variables (harmonic)

The powerconfig software is the new combined commissioning and service tool for communication-capable SENTRON measuring devices and circuit breakers.

The PC-based tool makes the parameterization of the devices easier, which gives rise to a considerable time saving, particularly when several devices have to be set up.

With powerconfig, the 3WL and 3VL circuit breakers and the 7KM PAC measuring devices with expansion modules can be parameterized, documented, operated and monitored using various communication interfaces.

Benefits

- Parameterization, documentation, operation and monitoring in one software
- Documentation of measured values and settings
- Clear presentation of the available parameters including plausibility testing of the inputs
- Display of the available device statuses and measured values in standardized views
- Project-oriented storage of device data
- Consistent operation and usability
- Support of the various device communication interfaces (Modbus RTU, Modbus TCP)
- Supported languages: English and German
- Read-out and saving of device recordings (device-dependent)
- Update of the device firmware and loading of language packs (device-dependent)
- No programming knowledge required for operation
- Communication via PROFIBUS and PROFINET and connection to STEP7 (in preparation)

Application

System requirements

Hardware requirements

- Processor: Intel Pentium III, 1 GHz (or higher)
- RAM: at least 512 MB
- Hard disk: at least 1 GB free
- Color monitor with a minimum resolution of 1024 x 768 pixels

Supported operating systems

- Microsoft Windows XP Prof. 32Bit SP3. MUL OS
- Microsoft Windows 7 Professional (32Bit)
- Microsoft Windows 7 Ultimate (32Bit)
- Microsoft Windows 7 Home Basic (32Bit)

Required framework:

- Microsoft .NET V3.5 SP1

More information

powerconfig is available free of charge at
http://support.automation.siemens.com/WW/view/en/50241697

Appendix

Catalog notes

Overview

Trademarks

All product designations may be registered trademarks or product names of Siemens AG or supplier companies whose use by third parties for their own purposes may violate the rights of the owner.

Amendments

Unless stated otherwise on the individual pages of this catalog, we reserve the right to make changes, in particular to the specified values, measurements and weights.

Dimensions

All dimensions are in mm.

Images

The illustrations are not binding.

Technical data

The technical data are for general information purposes. Always heed the operating instructions and the instructions for individual products during assembly, operation and maintenance.

Further technical information is available at
www.siemens.com/lowvoltage/support

- under Product List:
  - Technical specifications
- under Entry List:
  - Updates
  - Download
  - FAQ
  - Manuals
  - Characteristic curves
  - Certificates

Configurators can be found at
www.siemens.com/lowvoltage/configurators

Assembly, operation and maintenance

Always heed the operating instructions and the instructions for individual products during assembly, operation and maintenance.

Symbols

The symbols used in this catalog are listed below. These symbols are use in conjunction with an orange background to mark special selection criteria (e. g. connections, types of coordination, etc.).

Connections	
	Screw connection
	Ring terminal lug connection
Breaking capacity of 3WL circuit breakers	
N	ECO breaking capacity (I_{cu} up to 55/66 kA at 500 V)
S	Standard breaking capacity (I_{cu} up to 66/80 kA at 500 V)
H	High breaking capacity (I_{cu} up to 85/100 kA at 500 V)
C	Very high breaking capacity (I_{cu} up to 150 kA (3-pole)/130 kA (4-pole) at 500 V)
DC	Breaking capacity for DC current
Breaking capacity of 3VL circuit breakers	
N	Standard breaking capacity (I_{cu} up to 55 kA at 415 V)
H	High breaking capacity (I_{cu} up to 70 kA at 415 V)
L	Very high breaking capacity (I_{cu} up to 100 kA at 415 V)

Logistics

General

With regard to delivery service, communications and environmental protection, our logistics service ensures "quality from the moment of ordering right through to delivery". By designing our infrastructure according to customer requirements and implementing electronic order processing, we have successfully optimized our logistics processes.

We are proud of our personal consulting service, on-time deliveries and 1-day transport within Germany.

To this end, we supply the preferred types marked with ► ex works.

We regard the DIN ISO 9001 certification and consistent quality checks as an integral part of our services.

Electronic order processing is fast, cost-effective and error-free. Please contact us if you want to benefit from these advantages.

Packaging, packing units

The packaging in which our devices are dispatched provides protection against dust and mechanical damage during transport, thus ensuring that you receive our products in a perfect state.

We select our packaging for maximum environmental compatibility and reusability (e. g. crumpled paper instead of polystyrene chips for protection during transport in packages up to 32 kg) and, in particular, with a view to reducing waste.

With our multi-unit packaging and reusable packaging, we offer you specific types of packaging that are both kind to the environment and tailored to your requirements:

Your advantages at a glance:

- Lower order costs.
- Cost savings through uniform-type packaging: low/no disposal costs.
- Reduced time and cost thanks to short unpacking times.
- "Just-in-time" delivery directly to the production line helps reduce stock: cost savings through reduction of storage area: cost savings through reduction of storage area.
- Fast assembly thanks to supply in sets.
- Standard Euro boxes - corresponding to the Euro pallet modular system - suitable for most conveyor systems.
- Active contribution to environmental protection.

Unless stated otherwise in the "Selection and ordering data" of this catalog, our products are supplied individually packed.

> For small parts/accessories, we offer you cost-effective packaging units as standard packs containing more than one item, e. g. 5, 10, 50 or 100 units. It is essential that whole number multiples of these quantities be ordered to ensure satisfactory quality of the products and problem-free order processing.

The products are delivered in a neutral carton. The label includes warning notices, the CE marking, the open arrow recycling symbol, and product description information in English and German. In addition to the Order No. (MLFB) and the number of items in the packaging, the Instr. Order No. is also specified for the operating instructions. It can be obtained from your local Siemens representative (you will find a list of your local Siemens representatives at www.siemens.com/automation/partner).

The device Order No. of most devices can also be acquired through the EAN barcode to simplify ordering and storage logistics.

The Order No. and EAN codes are assigned electronically in the master data of the products for low-voltage power distribution and electrical installation.

Ordering notes

Overview

Ordering special designs

When ordering products that differ from the standard versions listed in the catalog, **"–Z"** must be added to the Order No. indicated and the required features must be specified using alphanumeric order codes or plain text.

Small orders

When ordering very small quantities, the cost of order processing often exceeds the order value. We therefore recommend that you combine several small orders. Where this is not possible, we regret that we are obliged to make a small processing charge: for orders with a net goods value of less than € 250 we charge a € 20 supplement to cover our order processing and invoicing costs.

Explanations on the Selection and Ordering Data

Delivery time class (DT)

DT	Meaning
►	Preferred type
A	two workdays
B	one week
C	three weeks
D	six weeks
X	on request

Preferred types are device types that can be delivered immediately ex works, i. e. they are dispatched within 24 hours.

If ordered in normal quantities, the products are usually delivered within the specified delivery times, calculated from the date we receive your order.

In exceptional cases, delivery times may vary from those specified.

The delivery times are valid ex works from Siemens AG (products ready for dispatch).

Shipping times depend on the destination and the method of shipping. The standard shipping time for Germany is one day.

The specified delivery times are correct at the time of going to print and are subject to constant optimization. Up-to-date information can be found at www.siemens.com/industrymall.

Price units (PU)

The price unit defines the number of units, sets or meters to which the specified price and weight apply.

PS/P. unit (packaging size/packaging unit)

The packaging size / packaging unit defines the number, e. g. of units, sets or meters, for outer packaging.

- The **first digit** in the PS/P. unit column (packaging size/packaging unit) indicates the minimum order quantity. You can only order this specified quantity or a multiple thereof.
- The **second digit** in the PS/P. unit column (packaging size/packaging unit) specifies the number of units contained in larger packaging (e. g. in a carton). You must order this quantity or a multiple thereof if you want the item to be delivered in a larger packaging quantity.

Examples:

PS/P. unit	Meaning
1 unit	You can order one item or a multiple thereof.
5 units	Five units are packed in a bag. Because the bags cannot be opened, you can only order a multiple of the quantity contained in the bag: 5, 10, 15, 20 etc.
5/100 units	One carton contains 20 bags, each containing 5 units, i. e. a total of 100 units. If only cartons are available for delivery, you need to order a multiple of the carton quantity: 100, 200, 300, etc. Ordering a quantity of 220 units would result in the following delivery: two cartons, each containing 100 units (= 200 units) and 4 bags, each containing 5 units (= 20 units).
1 set	A set comprises a defined number of different parts.

Price groups (PG)

Each product is allocated to a price group.

Weight

The defined weight is the net weight in kg and refers to the price unit (PU).

Examples

DT	Order No.	Price per PU	PU (UNIT, SET, M)	PS/ P. unit	PG
►	**5SW3 300**		1	1/10 units	008

DT: Preferred type
PU: One unit (on which price is based)
PS/P. unit: 1 = minimum order quantity / 10 = quantity per carton
PG: 008

DT	Order No.	Price per PU	PU (UNIT, SET, M)	PS/ P. unit	PG
A	**5TG8 068**		1	1 set*	027

DT: C = three weeks
PU: One set* (on which price is based)
PS/P. unit: The minimum order quantity is one set*
PG: 027
* The selection and ordering data specify the parts that make up a set

Low-voltage power distribution and electrical installations technology. The secrets of UL. You have our support.

Our products for low-voltage power distribution and electrical installation are designed not only for the IEC market. Numerous devices have both UL and IEC approval. This makes it easier for manufacturers of switchgear and controlgear assemblies to enter the North American market.

Exports to North America require special approvals which differ from the IEC directives. On the IEC market, directives define only the essential functions of a system. The technical details are not listed. By contrast, directives on the American market go into the details of how to carry out the installation work etc.

For OEMs and machine manufacturers it is important to know the main differences between the two technical worlds and to work together respectively with manufacturers and suppliers who have the right products and know-how.

Siemens is a strong partner in this case. Our know-how extends from the production of UL-approved devices to the wiring of control cabinets according to UL regulations.

These UL requirements are already taken into account when designing our devices for low-voltage power distribution and electrical installation. They are developed not only for the IEC market but also for the UL market.

We have been working with UL (Underwriters Laboratories Inc.®), the leading technical certification company in the USA, since 1969. We are also glad to share our knowledge with you in the form of training courses.

With our UL-certified products for low-voltage power distribution and electrical installation you are on the safe side and can build control cabinets according to UL standard easily and quickly.

This catalog contains UL-certified devices and systems from the SENTRON and ALPHA product families.

In addition to looking in this catalog you should also check out our Catalog LV 16 "Switching Devices and Components for Applications according to UL" for UL-specific products:

- SIRIUS 3RV17 and 3RV18 Circuit Breakers
- SENTRON safety, switching, measuring and monitoring devices
- ALPHA 8HP molded-plastic distribution systems
- ALPHA FIX Terminal Blocks

Take a look at our range of products and convince yourself. Or simply click on

www.siemens.com/lowvoltage/ul-europa

Here, you will find information on for example UL standards, UL classification and a number of technical particularities of UL.

Under "UL Overview/Standards and Approvals" we provide a summary of the available products and product groups. A table lists the UL standards to which the products conform and contains links to the corresponding UL reports.

Under "Portfolio" we round off with a list of our most relevant products for low-voltage power distribution and electrical installation as well as for low-voltage controls (including links to the respective Internet product pages).

Simply click on the navigation bar and go on a UL discovery tour!

ATEX explosion protection

Overview

In many industries the production, processing, transport and storage of combustible substances are accompanied by escaping gases, vapor or spray which find their way into the environment. Other processes result in combustible dust. Together with the oxygen in the air, the result can be an explosive atmosphere which will explode if ignited.

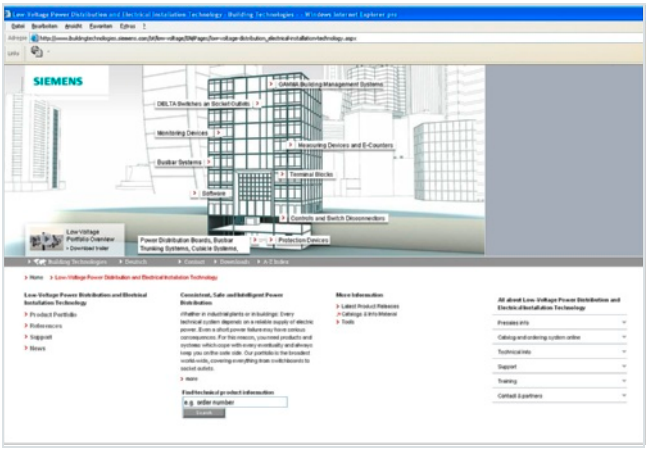
Serious injury to persons and damage to property can result particularly in the chemical and petrochemical industry, mineral oil and natural gas production, mining, mills (e. g. grain, solid materials) and many other sectors.

To guarantee the maximum possible safety in these areas, the legislators of most countries have drawn up requirements in the form of laws, regulations and standards. In the course of globalization, great progress has been made with regard to uniform directives for explosion protection.

With Directive 94/9/EC, the European Union laid the foundations for complete harmonization by requiring that all new devices as from 1st July 2003 have to be approved in accordance with this directive.

In this catalog, special attention is drawn to devices which comply with the ATEX Directive. However, it does not replace intensive study of the relevant fundamentals and directives when planning and installing electrical systems.

Overview



We regard product support as just as important as the products and systems themselves.

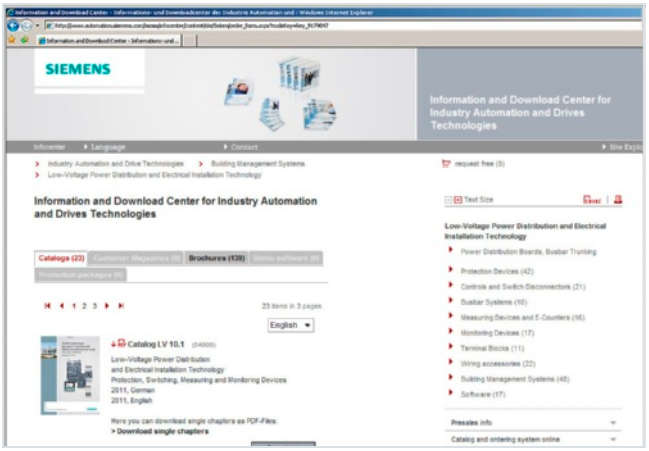
Visit our site on the Internet for a comprehensive offering of support for low-voltage power distribution and electrical installation products, such as

- Operating instructions and manuals for direct download
- Online registration for seminars and events
- Up-to-date answers to your queries and problems
- Software upgrades and updates for fast download
- Telephone assistance in more than 190 countries
- Photos and graphics for external use

and much more - all conveniently and easily accessible.

Address:

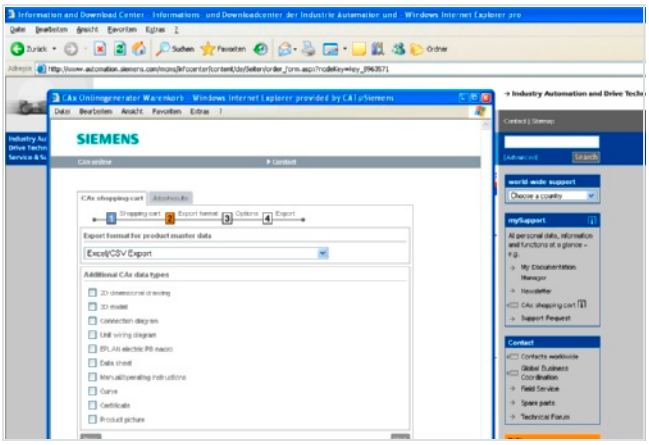
www.siemens.com/lowvoltage



You will find regularly updated information material such as catalogs, customer magazines, brochures and trial versions of software for low-voltage power distribution and electrical installation on the Internet at:

www.siemens.com/lowvoltage/infomaterial

Here, you can order your copy of the available documentation or download it in common file formats (PDF, ZIP).



For your configuration systems we can provide technical and graphic data in electronic form for the range of low-voltage power distribution and electrical installation products:

CAx online generator

For the further processing of low-voltage power distribution and electrical installation products in CAE/CAD systems the online generator provides:

- Technical product master data in CSV and Excel format
- Graphic product data
  - 2D dimensional drawings in DXF format (other formats optional)
  - 3D models in STEP format
  - Internal circuit diagrams
  - EPLAN electric P 8 macros
- Documentation in the form of PDF files
  - Product data sheets
  - Manuals
  - Operating instructions
  - Characteristic curves
  - Certificates
- Product photos
- Texts for tenders in GAEB and Text format.

Standards and approvals

Quality management

The quality management system of our I BT LV Business Unit complies with the international standard EN ISO 9001.

The products and systems listed in this catalog are marketed using a VDE-approved quality management system according to ISO 9001.

VDE certificate

Siemens AG
Industry Sector
Building Technologies Division

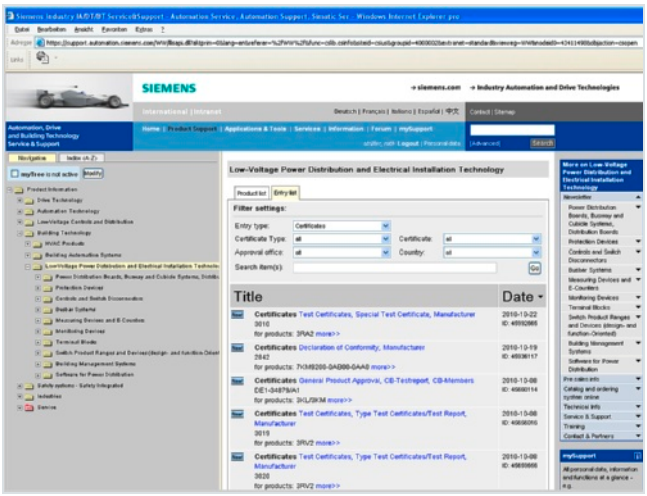
Low Voltage Distribution (I BT LV)
Reg. No.: 40017/QM/03.06

Certificates

Information on the certificates available (CE, UL, CSA, FM, shipping authorizations) for low-voltage power distribution and electrical installation products can be found on the Internet at:

www.siemens.com/lowvoltage/support

In the Entry List you can use the certificate type (general product approval, explosion protection, test certificates, ship building,...) as a filter criterion.



Approval requirements valid in different countries

Siemens low-voltage switchgear and controlgear are designed, manufactured and tested according to the relevant German standards (DIN and VDE), IEC publications and European standards (EN) as well as CSA and UL standards. The standards assigned to the single devices are stated in the relevant parts of this catalog.

As far as is economically viable, in addition to the pertinent VDE, EN and IEC standards, the requirements of the various regulations valid in other countries are also taken into account in the design of the devices.

In some countries (see table below), an approval is required for certain low-voltage switchgear and controlgear components. Depending on the market requirements, these devices have been submitted for approval to the authorized testing institutes.

In some cases, CSA for Canada and UL for the USA only approve special switchboard designs. Such special versions are listed separately from the standard versions in the individual parts of this catalog.

For these devices, partial limitations of the maximum permissible voltages, currents and rated outputs can be imposed, or special approval and, in some cases, special identification is required.

For use on board ship, the specifications of the marine classification societies must be observed (see table below). In some cases, they require type tests of the components to be approved.

The present state of approval is shown in the "Overview of approved devices" tables on 20/12 to 20/29.

Testing bodies, approval identification and approval requirements

	Canada[1]	USA[1]	China
Government-appointed or private, officially recognized testing bodies	CSA UL (USA)	UL	CQC
Approval symbol	c UL c FM c FM us c UL us	UL FM c FM us c UL us	CCC
Approval requirements	+	+	+
Remarks	UL and CSA are authorized to grant approvals according to Canadian or US regulations. Please note: these approvals are frequently not recognized and additional approval often has to be obtained from the national testing authority.		CCC

For more information about UL and CSA see 20/11.

[1] For guide numbers and file numbers for the approvals, visit our website at www.siemens.com/lowvoltage/support.

CE mark of conformity

Manufacturers of products which fall within the scope of EC directives must identify their products, operating instructions or packaging with a CE marking of conformity.

The CE marking confirms that a product fulfills the appropriate basic requirements of all pertinent directives. The marking is a mandatory requirement for putting products into circulation throughout the EU.

All products in this catalog are in conformance with the EC directives and bear the CE marking of conformity.

- Low-voltage directive
- EMC directive
- Machinery directive
- Ex protection directive

The CE marking of conformity: CE.

Accident prevention

Test certificates and approvals from the BIA (German statutory industrial accident insurance institution in Bonn) and from SUVA (Swiss institute for accident prevention) are available for some devices in safety control systems. For details, see the respective product descriptions.

Special standards, for example the USA and Canada

In the USA and Canada, for machine tools and processing machines in particular, supply lines are laid using rubber insulated cables enclosed in heavy-duty steel pipings similar to that used for gas or water pipe systems.

The tubing system must be completely watertight and electrically conductive (especially sleeving and elbows). Since the tubing system can also be grounded, the cable entries of enclosed units equipped with heavy-gauge or metric threads must be fitted with metal adapters between these threads and the tube thread. The necessary adapters are specified for the switchboard as accessories; they must be ordered separately unless otherwise specified.

Low-voltage switchgear and controlgear for auxiliary circuits (e. g. contactor relays, commanding and signaling devices and auxiliary switches/auxiliary contacts in general) are generally only approved by CSA and UL for **"Heavy Duty"** or **"Standard Duty"** and are identified either with these specifications in addition to the maximum permissible voltage or by using an abbreviation.

The abbreviations are harmonized with IEC 60947-5-1 Appendix 1 Table A.1 and correspond to the stated utilization categories.

For various switching devices detailed in the catalog, a note has been included to the effect that, above a certain voltage, the auxiliary switches/auxiliary contacts can only be used if they have the same polarity. This means that the input terminals can only be connected to the same pole of the control voltage, e. g. "600 V AC above 300 V AC same polarity".

Different features of UL approvals (for USA and Canada)

Recognized Component	Listed Product
Devices are identified on the rating plate using the "UL recognition mark": USA: , c us Canada: c, c us	Devices are identified using the "UL listing mark" on the rating plate e. g. USA: LISTED 165 C IND. CONT. EQ. Canada: c LISTED 165 C IND. CONT. EQ. (165 C stands for: Siemens, I IA CD Division, Amberg plant)
Devices are approved as modules for "factory wiring", i. e.: as devices for installation in control systems, which are selected, installed, wired and tested entirely by trained personnel in factories, workshops or elsewhere, **according to the operating conditions**.	Devices are approved for "field wiring", i. e.: • As devices for installation in control systems, which are completely wired by trained personnel in factories, workshops or elsewhere. • As single devices for sale in retail outlets in the USA/Canada.
If devices are or c approved as "listed products", they are also approved as or c "recognized components".	

For more information about UL and CSA see 20/10.

Standards and approvals

Special standards, for example Russia, Australia and China

GOST approval for Russia

A GOST approval is required for all products that are to be sold in Russia. The GOST mark has been obligatory on the packaging of all devices since mid-1998.

All devices delivered to any part of the Russian Federation must have this customs certification.

C-Tick licensing for Australia

The C-Tick license is required for marketing Siemens devices in Australia. Electronic devices must provide proof of EMC clearance in Australia, similar to the CE mark of conformity laid down by the EMC directive applicable in the EU and bear the "C-Tick" mark. These requirements have been in force since October 1st, 1999.

CCC approval

Since August 1, 2003, CCC approval is required for many products that are marketed in China.

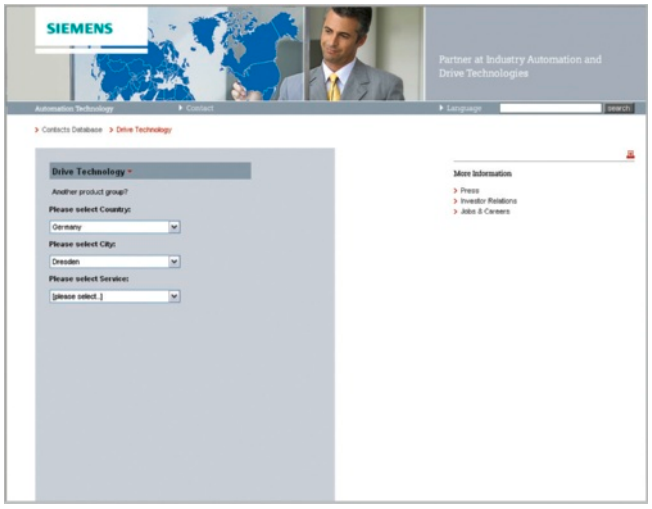
More information

You can find more information about standards and approvals at
www.siemens.com/lowvoltage/support

Siemens contacts

Contact partners at Siemens Industry



At Siemens Industry Automation and Drive Technologies, more than 85 000 people are resolutely pursuing the same goal: long-term improvement of your competitive ability. We are committed to this goal. Thanks to our commitment, we continue to set new standards in automation and drive technology. In all industries – worldwide.

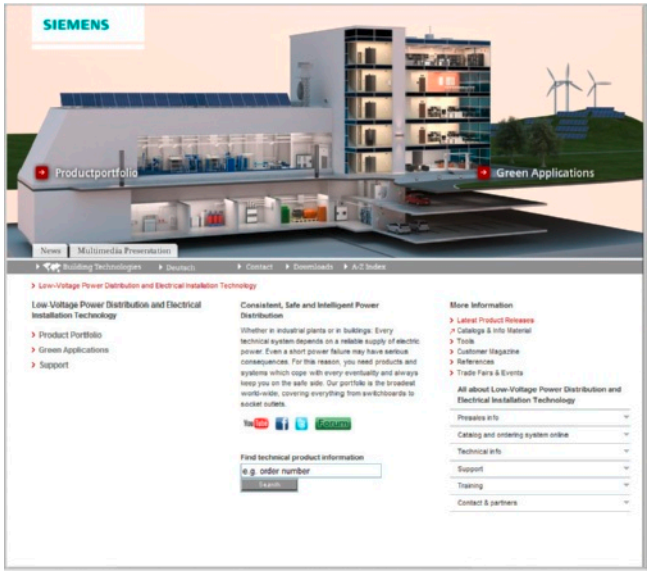
At your service locally, around the globe for consulting, sales, training, service, support, spare parts ... on the entire Industry Automation and Drive Technologies range.

Your personal contact can be found in our Contacts database at:
www.siemens.com/automation/partner

You start by selecting a

- Product group,
- Country,
- City,
- Service.

Low-Voltage Power Distribution and Electrical Installation Technology on the WWW



Siemens low-voltage power distribution and electrical installation technology offers switchboards, busbar trunking systems, distribution boards as well as protection, switching, measuring and monitoring devices, building management systems, switches and socket outlets. The consistency, modularity and intelligence of our components and systems offer you numerous advantages – throughout their service life and wherever you are in the world. We deliver trendsetting designs and innovative functions in unique quality, developed in accordance with the applicable international standards.

Comprehensive information about all products and systems as well as service and support is available in a compact and clear format on the Internet at:

www.siemens.com/lowvoltage

Product selection using the interactive catalog CA 01 of Industry

Detailed information together with convenient interactive functions:
The interactive catalog CA 01 covers more than 80 000 products and thus provides a full summary of the Siemens Industry Automation and Drive Technologies product base.

Here you will find everything that you need to solve tasks in the fields of automation, switchgear, installation and drives.
All information is linked into a user interface which is easy to work with and intuitive.

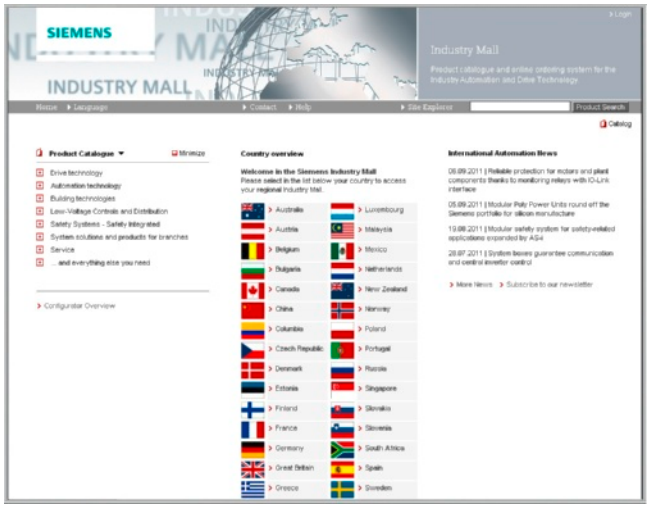
After selecting the product of your choice you can order at the press of a button, by fax or by online link.

Information on the interactive catalog CA 01 can be found in the Internet under

www.siemens.com/automation/ca01

or on DVD.

Easy Shopping with the Industry Mall



The Industry Mall is the virtual department store of Siemens AG in the Internet. Here you have access to a huge range of products presented in electronic catalogs in an informative and attractive way.

Data transfer via EDIFACT allows the whole procedure from selection through ordering to tracking of the order to be carried out online via the Internet.

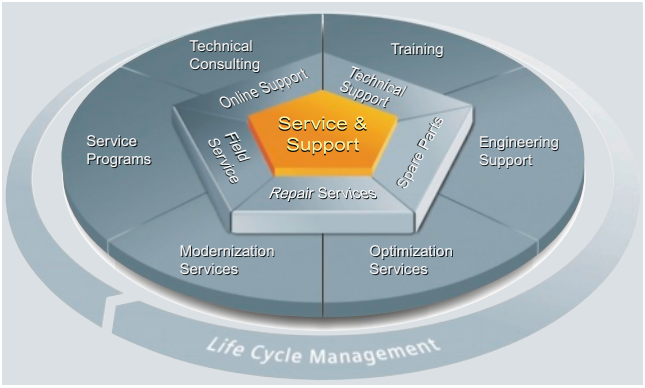
Numerous functions are available to support you.

For example, powerful search functions make it easy to find the required products, which can be immediately checked for availability. Customer-specific discounts and preparation of quotes can be carried out online as well as order tracking and tracing.

Please visit the Industry Mall on the Internet under:

www.siemens.com/industrymall

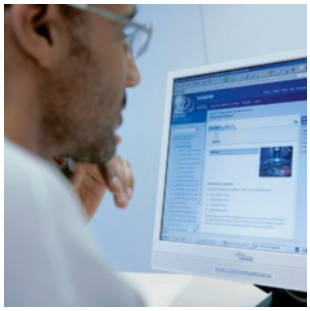
The unmatched complete service for the entire life cycle



Our Service & Support are available worldwide to help you with every aspect of Siemens Building and Automation Technologies. We offer on-site support for every phase of the life cycle of your buildings and plants in more than 100 countries.

Every step of the way, you have access to an experienced team of specialists and their combined expertise. Thanks to regular training and the close cooperation of key employees around the globe, we are able to offer reliable services for a huge range of options.

Online support



Our comprehensive online information platform covers every aspect of our Service & Support and is available whenever, wherever.

www.siemens.com/lowvoltage/support

Field Service

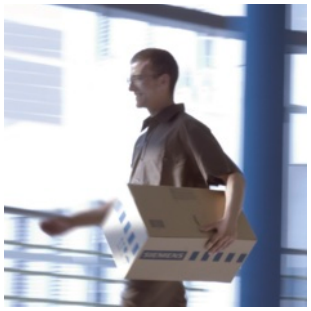
Siemens Field Service offers support with all aspects of commissioning and maintenance – so that the availability of your machines and plants is assured whatever the case.

Technical support

The competent consulting service for technical issues with a broad range of customer-oriented services for all our products and systems.

www.siemens.com/lowvoltage/technical-support

Spare parts



Plants and systems in all sectors worldwide are expected to meet ever higher levels of availability. We can help you rule out unexpected stoppages with a global network and optimum logistics chains.

Training

Extend your lead – with practice-related know-how straight from the manufacturer.

www.siemens.com/lowvoltage/training

Specification texts

You can obtain qualified, free support to help you produce specifications for technically equipping non-residential and industrial buildings at

www.siemens.com/ausschreibungstexte

Overview

For more efficiency in meeting all your needs – comprehensive support and round-the-clock access to proven tools – quickly and easily via the Internet.

Software Licenses

Overview

Software types

Software requiring a license is categorized into types.
The following software types have been defined:

- Engineering software
- Runtime software

Engineering software

This includes all software products for creating (engineering) user software, e.g. for configuring, programming, parameterizing, testing, commissioning or servicing.

Data generated with engineering software and executable programs can be duplicated for your own use or for use by third-parties free-of-charge.

Runtime software

This includes all software products required for plant/machine operation, e.g. operating system, basic system, system expansions, drivers, etc.
The duplication of the runtime software and executable programs created with the runtime software for your own use or for use by third-parties is subject to a charge.
You can find information about license fees according to use in the ordering data (e.g. in the catalog). Examples of categories of use include per CPU, per installation, per channel, per instance, per axis, per control loop, per variable, etc.
Information about extended rights of use for parameterization/configuration tools supplied as integral components of the scope of delivery can be found in the readme file supplied with the relevant product(s).

License types

Siemens Industry Automation & Drive Technologies offers various types of software license:

- Floating license
- Single license
- Rental license
- Trial license
- Factory license

Floating license

The software may be installed for internal use on any number of devices by the licensee. Only the concurrent user is licensed.
The concurrent user is the person using the program. Use begins when the software is started.
A license is required for each concurrent user.

Single license

Unlike the floating license, a single license permits only one installation of the software. The type of use licensed is specified in the ordering data and in the Certificate of License (CoL).
Types of use include for example per device, per axis, per channel, etc.

One single license is required for each type of use defined.

Rental license

A rental license supports the "sporadic use" of engineering software. Once the license key has been installed, the software can be used for a specific number of hours (the operating hours do not have to be consecutive).
One license is required for each installation of the software.

Trial license

A trial license supports "short-term use" of the software in a non-productive context, e.g. for testing and evaluation purposes.
It can be transferred to another license.

Factory license

With the Factory License the user has the right to install and use the software at one permanent establishment only. The permanent establishment is defined by one address only.The number of hardware devices on which the software may be installed results from the order data or the Certificate of License (CoL).

Certificate of license

The Certificate of License (CoL) is the licensee's proof that the use of the software has been licensed by Siemens. A CoL is required for every type of use and must be kept in a safe place.

Downgrading

The licensee is permitted to use the software or an earlier version/release of the software, provided that the licensee owns such a version/release and its use is technically feasible.

Delivery versions

Software is constantly being updated.
The following delivery versions can be used to access updates:

- PowerPack
- Upgrade

Existing bug fixes are supplied with the ServicePack version.

PowerPack

PowerPacks can be used to upgrade to more powerful software.

The licensee receives a new license agreement and CoL (Certificate of License) with the PowerPack. This CoL, together with the CoL for the original product, proves that the new software is licensed.
A separate PowerPack must be purchased for each original license of the software to be replaced.

Upgrade

An upgrade permits the use of a new version of the software on the condition that a license for a previous version of the product is already held.
The licensee receives a new license agreement and CoL with the upgrade. This CoL, together with the CoL for the previous product, proves that the new version is licensed.
A separate upgrade must be purchased for each original license of the software to be upgraded.

ServicePack

ServicePacks are used to debug existing products.
ServicePacks may be duplicated for use as prescribed according to the number of existing original licenses.

License key

Siemens Industry Automation & Drive Technologies supplies software products with and without license keys. The license key serves as an electronic license stamp and is also the "switch" for activating the software (floating license, rental license, etc.).
The complete installation of software products requiring license keys includes the program to be licensed (the software) and the license key (which represents the license).

Detailed explanations concerning license conditions can be found in the "Terms and Conditions of Siemens AG" or at
www.siemens.com/industrymall
(Industry Mall Online-Help System)

Conditions of sale and delivery
Export regulations

Terms and Conditions of Sale and Delivery

By using this catalog you can acquire hardware and software products described therein from Siemens AG subject to the following terms. Please note! The scope, the quality and the conditions for supplies and services, including software products, by any Siemens entity having a registered office outside of Germany, shall be subject exclusively to the General Terms and Conditions of the respective Siemens entity. The following terms apply exclusively for orders placed with Siemens AG.

For customers with a seat or registered office in Germany

The "General Terms of Payment" as well as the "General Conditions for the Supply of Products and Services of the Electrical and Electronics Industry" shall apply.

For software products, the "General License Conditions for Software Products for Automation and Drives for Customers with a Seat or registered Office in Germany" shall apply.

For customers with a seat or registered office outside of Germany

The "General Terms of Payment" as well as the "General Conditions for Supplies of Siemens, Automation and Drives for Customers with a Seat or registered Office outside of Germany" shall apply.

For software products, the "General License Conditions for Software Products for Automation and Drives for Customers with a Seat or registered Office outside of Germany" shall apply.

General

The dimensions are in mm. In Germany, according to the German law on units in measuring technology, data in inches only apply to devices for export.

Illustrations are not binding.

Insofar as there are no remarks on the corresponding pages, - especially with regard to data, dimensions and weights given - these are subject to change without prior notice.

The prices are in € (Euro) ex works, exclusive packaging.

The sales tax (value added tax) is not included in the prices. It shall be debited separately at the respective rate according to the applicable legal regulations.

Prices are subject to change without prior notice. We will debit the prices valid at the time of delivery.

Surcharges will be added to the prices of products that contain silver, copper, aluminum, lead and/or gold if the respective basic official prices for these metals are exceeded. These surcharges will be determined based on the official price and the metal factor of the respective product.

The surcharge will be calculated on the basis of the official price on the day prior to receipt of the order or prior to the release order.
The metal factor determines the official price as of which the metal surcharges are charged and the calculation method used. The metal factor, provided it is relevant, is included with the price information of the respective products.

An exact explanation of the metal factor and the text of the Comprehensive Terms and Conditions of Sale and Delivery are available free of charge from your local Siemens business office under the following Order Nos.:

- 6ZB5310-0KR30-0BA1
  (for customers based in Germany)
- 6ZB5310-0KS53-0BA1
  (for customers based outside Germany)

Export regulations

Siemens shall not be obligated to fulfill this agreement if such fulfillment is prevented by any impediments arising out of national or international foreign trade or customs requirements or any embargoes or other sanctions.

If you transfer goods (hardware and/ or software and/ or technology as well as corresponding documentation, regardless of the mode of provision) delivered by us or works and services (including all kinds of technical support) performed by us to a third party worldwide, you shall comply with all applicable national and international (re-) export control regulations.

If required to conduct export control checks, you, upon request by us, shall promptly provide us with all information pertaining to particular end customer, destination and intended use of goods, works and services provided by us, as well as any export control restrictions existing.

Purchaser shall indemnify and hold harmless Siemens from and against any claim, proceeding, action, fine, loss, cost and damages arising out of or relating to any noncompliance with export control regulations by Purchaser, and Purchaser shall compensate Siemens for all losses and expenses resulting thereof, unless such noncompliance was not caused by fault of the Purchaser. This provision does not imply a change in burden of proof.

The products listed in this catalog / price list may be subject to European / German and/or US export regulations.

Therefore, any export requiring a license is subject to approval by the competent authorities.

According to current provisions, the following export regulations must be observed with respect to the products featured in this catalog / price list:

AL	Number of the German Export List Products marked other than "N" require an export license. In the case of software products, the export designations of the relevant data medium must also be generally adhered to. Goods labeled with an "AL" not equal to "N" are subject to a European or German export authorization when being exported out of the EU.
ECCN	Export Control Classification Number Products marked other than "N" are subject to a reexport license to specific countries. In the case of software products, the export designations of the relevant data medium must also be generally adhered to. Goods labeled with an "ECCN" not equal to "N" are subject to a US re-export authorization.

Even without a label or with an "AL: N" or "ECCN: N", authorization may be required due to the final destination and purpose for which the goods are to be used.

The deciding factors are the AL or ECCN export authorization indicated on order confirmations, delivery notes and invoices.

Errors excepted and subject to change without prior notice.
